A self description I assume. And by the way it should be "people have to represent" not "half to represent". Maybe you need a little code practice to sharpen your brain skills, assuming you have one.

Yep, listening to that commie music Ted Nugent ought to put him in da pokey
for a week (maybe they thought that he was a druggie because of the music he
listens to). Next time leave TED & listen to red neck music!!! It will
show that you are American!
Dave!!!!!!

That section addresses the construction of an amplifier by an amateur for use
in his OWN station. That does not address [mass] manufacture for resale.
[Proof of another num-nut who can't read.]

Alex:
Now all Cobra is JUNK and Uniden is good (like the OLD Cobras). Get a Uniden PC-68 or 78. Canada don't care, mash yur motor. How do I know? CB shop for over 21 years & went to Soviet Ontario recently.
Dave

Alex Miller wrote in message ...
I want to get a CB for my truck (Nissan Pathfinder), and I have no clue as to what is good and what is junk. I want a good radio, not some cheap piece of crap that will just piss me off. I'm looking to spend about $150~$200. At first, I'll mostly just be using it on the highway, as I've gone on trips with friends who had an old one and found it very useful, as well as entertaining. So I don't need something that will broadcast halfway across the country, yet. Just something reliable, that will keep me interested, let me know what's going on up ahead, and allow me to possibly expand in the future, if I'd like.

I'd like to have this in time for an upcoming trip I am taking, where I will be going to Canada, which brings up another question. Do I need to do anything special to enter Canada with a CB? I can't imagine I would, but I'd rather not get to the border and find that I have to remove the radio or something.

Thanks for any help you all can provide.

Alex

Your last post is the first in this entire thread that EVER mentioned the MASS PRODUCTION of
anything. part 97 does cover the ability of an amateur to sell what he has built or modified
which is what I was discussing. I posted on the amateurs ability to manufacture and sell their
own amps. I never mentioned MASS production of amps because the subject had not been brought up.
I mentioned 97.315 because it was relevant to what I was talking about and pointed out that the
ban you mentioned was on any amp capable of operation below 144 MHz. I guess you are a num-nut
that can't think.
plonk

Well, what do you think is going on on eBay? The original post did not appear
to be bitching about casual sales but that these items were being made on
demand. That's clearly more than 1 per year.

18. Best "bang for the buck" export radio?

Newsgroup: rec.radio.cb
Date: 2000-10-01 00:00:00 UTC
From: Rag Chew 442 <sezfamily@email.com>
Message-ID: <8r8a8t$90d$1@nnrp1.deja.com>
Source record: 53915

Must meet these requirements:

1) Strong A.M. Modulation with good swing / Good Audio!
2) 360 Channels
3) A high quality receiver with good Adj. Channel Rejection
4) SSB not required
5) Dependable unit / quality construction
6) Radio must sell new for $150-250.
Can you give a source with best price on the unit you recommend?

Could you let us know what the circumstances of the theft is? I presume this John guy did not give you something for the money you gave him. What was he sappose to give you or do for you and how much does he owe you now? Assuming he is a cb'er what handle(s) does he go by and what channels does he frequent, base station or mobile?
Good Luck and Book'em

Some of them around here sure need to.

> That radio doesn't
> even have repeater offsets so maybe I shouldn't have included it in the list
> per my post but it is still a wanna-be radio.

You'd be surprised at how many people don't use 10m repeaters. You'd also
be surprised at how many Kenwoods/Yaesus/Icoms turn out to really be
RCI2950s, and HR2510s.I'm actually starting to hear a lot of operators
admit to running the export rigs.

I starting to have a problem with power line RFI in the spring of 1999.
I called the local power company, and told the girl that answered what
was happening. A day or so later a couple of flunkies arrived, and asked
me if I had a portable AM radio they could borrow. I politely told them
to go back, and find someone that knew what he was doing, and send him
out. They left. I called back, and politely asked to talk to the resident
RFI engineer. At the time, he was unavailable, but he did call me back.
He asked a few questions, and told me he'd be out to check things as soon
as possible.
Much to my surprise, he did come, about two days later. After asking more
questions, to make sure I had done my home work, he produced
the correct equipment to check things with, and disconnected my house to
make sure it wasn't coming from there. It wasn't.
In less than 30 minutes, he had 2 bucket crews, along with 2 smaller
truck crews on the scene. two, and one half days, (20 hrs) later, I had
the quietest location for radioing I have ever had. They practically
rebuilt 10 poles with new insulators. Tightened everything. From an S9
constant noise, to no noise. NONE. These boys knew their stuff. One guy
was constantly coming back to my house to check to see what kind of
progress they were making.
When I was fully satisfied, they continued to fix 2 more poles, just in
case. After they were through, the RFI guy came back to chew me out for
letting things get so bad. Told me, as an Amateur, it was my
responsibility to help the power company stay informed.
What I learned, is that if you are persistent, but not rude, check out
the situation so you know how to answer questions correctly, and make
sure you let the power company know that you are aware of the rules, most
times they will cooperate.
Whatever you do, don't just call, and tell the lady that answers what you
THINK, and rely on her. She probably hasn't a clue.

What's that got to do with me using the word 'piss' in a humorous way, Christine? Are you too priggish to want to see it in print? Others have used far worse words than that on this NG, especially the execrable Ged, whose favourite epithet seemed to be 'Twat' until I pulled him up about it. Did YOU ever pull him up about his language? I see that apart from being priggish and over-sensitive, you don't appear to understand what you read either. Perhaps you could point me to the post in which I ever said I have a 'certificate' to prove my sanity. Oh, you can't? Thought so.

It's another interesting foible of the intellectually-challenged that they read what they want to read into things, mainly due to intellectual and cognitive deficits, uncritical thinking processes and a desire that they appear to be right every time, so they continually delude themselves. It seems you also fit the bill of the Wally's, Ged's and Chris Kirby's of the group. Oh, I forgot, you are Christine! Squeal a little louder, so that everyone can hear.

On or about Sun, 01 Oct 2000 21:47:17 GMT, "The Game"
<TheGame@aolhell.con>, using the forum rec.radio.cb did say:

:LOL... nice try but sorry I am not Wild Bill .. You and I both know your
:picture along with a few of your friends was on either your website or a
:link off your web site .. why do you need to lie about this and why would i
:make up that I saw your mug on " some web page " hows that maybe it was not
:yours but a friend of your or a link off of your page ... Like i said you
:lok as queer as a 3 dollar bill..

Game:

1. WildBill posted my home address, and yet you claimed to have done
it. So either you're the same person, or you're "together"

2. The sites my resume is on are not my homepages. There were no links
from any of my resume sites to my homepage. Such a link would be
unprofessional. You're talking out of your ass, still.

3. You must be a bit "slow". I'll repeat it again, so maybe it'll sink
in. Just because you and your buttbuddies are queer doesn't mean the
rest of the world is. Don't push your personal life off on the rest of
us. We don't want it.

4. The fact of the matter is that this whole "exchange" started
because of my suggesting larger power cable for the original poster's
amp. In fact, the original poster came back on and posted that he was
using 10 guage power leads, which I'd mentioned should be an absolute
minimum. So I was right. Admit it, shut up, and go lay down by your
bowl.

-SSB

P.S. When we get done with this argument, why dont' you grab the GF,
and, since you've got my address already, come on over some weekend.
I'll have my GF and the BBQ ready, you bring the beer. ::Cackle::

Um... Dave, The Francis fiberglass whips have no load... they're just
a thin copper wire inside a fiberglass carrier,

(I'm starting to hear HAL coming thru the 'puter speakers.)

Unless you're talking about a different antenna than the $7 fiberglass
whips Francis makes.... which aren't tuneable.

Why would you want a radio with extra channels and no SSB? 99% of
all english traffic there is sideband.

1.4 volts _CAN_ make a difference when the final is applied to full rail voltage.
For a stock radio, the drop is meaningless.

Don't spend a DIME on a Wilson--get a Hustler HQ-27 or a Francis CB 16
instead. It will give you more performance for less $$$$!!!!!
Dave!!!!!!

Matt Deremo wrote in message <8qtijs$5on@dispatch.concentric.net>...
I agree with Andi....again. Nothing like running your car off the road
trying to adjust the clarifier on SSB, plus the lower bands are useless
unless you know Spanish. However, if you do go with either one of these
radios, which I consider high end mobiles, do yourself 2 favors:
1. Spend the extra 20 bucks and get the Wilson 5000.
2. Set both cars up with the quick attach mounts, so you can easily
put the radio in the trunk EVERYTIME you leave the car. I wouldn't leave
either one of those in sight waiting for some asshole to break out the
window and walk away with 3 or 4 bills worth of equipment.

By the way Nick, 350 is a great price for a peaked RCI6900FHP. I would have
thought that to be closer to 400.

This is quite believable. An acquaintance of mine when on a trip to Singapore, used a radio on board a JAL 747 to make several contacts back in the USA. The radios in commercial aircraft do not have any of the restrictions of other equipment and will tune pretty much wherever you want.

The capacitors are usually a good bet. They must be placed as close to
the fan as possible to have the greatest effect. Another consideration
is that the brushes in your motor may be worn out or filthy dirty. Or
the fan could be slightly seized causing it to draw much more current
than it would normally.

MC

Neomorpheous wrote:

>the other illegal acts taking place. Your thoughts?

Section 302 of the Comm Act is clear - manufacturing
(building), selling oruse of proscribed equipment is a
violation - mere possession (not for sale) is not so listed
(yet).

The CB Rules presume operation whem a linear is found at a CB
station AND there is extrinsic evidence of overpower operation.

The FCC field folks have tried for many years to get The
Congress to make possession of a proscribed device a violation
but the request has been on the "no priority" list becasue the
topic isn't jazzy enough to grab The Congress' attention.

>Well then, you should tell both houses of Congress that the FCC is separate -
>so that they can have separate committees for it.

It is not unusual to find two or more subjects under one
oversight committee, and IIRC they have separate suncommittees
for Communications.

There is a communications entity in the Dept. of Commerce -
the National Telecommunications and Information Agency - NTIA -
which among other things, does the same things as the FCC does
but for Federal government entities. When the FCC needs radio
channels for its own internal comm net, it has to go to NTIA.

There are some of us (inclusding myself) who feel that the
current FCC should be split the same was as exists in Canada.
There, the Canadian Radio Television Commission makes the
broadcast policy, program content, and "who should get a
license" decisions and Industry Canada (the former Ministry of
Communications) does the spectrum management technical and
enforcement tasks.

If this was to happen here, the logical plabe for the spectrum
managers would be the Commerce Department.

Well... I wish that were that simple.
While you are correct that most amps out there have virtually the same circuitry... the values are the components are critical to the overall outcome. If those values are chosen poorly... the amp performance will suffer greatly... no matter how clean it looks inside.

It is thier obligation according to the FCC to fix it. Identification
of the problem equipment is the problem of the power company.
(hire an expert and give him or her the equipment to do the job).
Once identified he can go to the next problem and the problem
equipment can be replaced by a line crew.
>

I've heard, on two occasions, a guy talking DX from a navalship (at least that is what he claimed) in the south Atlantic on the 26 megs band.

Well, Lawtey and Waldo were both quoted as not giving a damn about what Triple A or anyone else says abut their towns. Their unjust stops still occur on a daily basis. U.S. 301 is one of the main roads one usually takes to get to the west coast of Fla. from Jacksonville, other than the longer route of I-10 to 75. I found a bypass around these towns some years ago and it doesn't take anymore time, unless you are in a big truck, then you might lose 30 minutes. Still worth it. Anyone in need of an alternate route can email me.

There are no "free bands", all those frequencies are allocated to other services.

I have often run phone patches for US Navel personnel aboard US ships at sea, and for seamen on merchant vessels. Used to communicate with a neighbor who flew for Contential Air Lines as he flew the route between San Francisco and Hawaii. All this was on the ham bands and the operating personnel were licensed hams.

>>i 22, you dont know what your talking about. the majority of the galaxy radios
ive seen come misaligned. its a good idea to take it the tech to get it up to specs and talking right. tell them to leave the limiter in tact and tune for best sound and not most power. i'd say you could trust hillbilly dave to do a good job if you want to get a mail order tune up<<

your right i don't know about misaligned galaxies , but whats the point of spending th 20-50 $ that some guys charge to make the radio overmodulate , and get a few more watts , and splatter alot more . when he will be getting an amp ?

amps are garbage in garbage out , drive a radio with a over blown galaxy and you could have a set up that sounds like crap , and splatters very bad.

i stand by what i said . save the $ from the tech cost on the modicication to the radio , and get the best antenna you can buy .

Hello JR: Yes fine business old man.

I certainly hope all those operators had their little pinkie finger
properly raised up while having Tea. And the proper doilies for their
Tea Cup!

And I am also sure everyone here will want to go out and study for a
amateur license after hearing you. What a guy!

If it is a commercial aircraft, no. However, on a light aircraft you can operate anything battery operated you can carry onto the plane. If you want to permanently mount it you will have to re-submit the aircraft for certification - and it will probably fail as CBs are not certified for aircraft.

The freebands you inquired about are usually the channels one receives in a modded 10 meter radio, which generally includes anything above channel 40 up to the 10 meter band and anything below 1 down to 25 megs depending on what your radio is capable of. These frequencies are assigned to certain entities, such as the govt., petroleum, forest service, etc.. These bands also yield great DX. Your best bet is to familiarize yourself with the bands and learn the possible penalties for transmitting on these bands should you get popped, weigh the consequences, and decide for yourself if this is an avenue you wish to persue. No matter what anyone tells you, educate YOURSELF. Don't let anyone do it for you.

Charles,

Check out the links below:

http://www.angelfire.com/az/firecommunications/npinpo.txt
http://www.angelfire.com/az/firecommunications/about.txt

All tx measurements and adjustments made with
Dosy PM-2001 into 50 ohm dummy load

All receiver measurements made with Hewlett
Packard 606A R.F. Signal Generator with
usable range down to .12 uv.

Power Supply: Pyramid PS-36 at 13.8 volts
Calibrated Frequency Counter
Ballantine 1066D 20 MHZ Dual trace scope
with prescaler.....

Parameters measured and adjusted:

Complete alignment of tx strip
10.7mhz and 455khz receiver ifs
Squelch threshold (am and ssb)
Connex board/where applicable
S meter calibration/am & ssb
Speech processor levels/where applicable
Match to amplifier/where applicable
FM tx deviation
FM rcve discriminator
SSB carrier balance
AM tx and rcve freq
SSB tx and rcve offsets
All tx carrier levels
All tx bias levels
ALL mixer stages
Noise blanker
Amc limiting circuit/am
Alc limiting circuit/ssb

The time required for the complete conversion and
realignment for the 77 in a properly equipped shop
is on the order of 1 hour, give or take.....

73,
NAO911/Jack

Dave!!!!!!

jamesrhampton@my-deja.com wrote in message <8r5ctj$81d$1@nnrp1.deja.com>...
While everyone seems to have their panties in a bunch, here is
something to think about - and it bothers me a bit. The problem I see
with locals doing the enforcing is exactly the same problem we have
with traffic enforcement. Ever been to a town where they tend to
ticket the non-locals a lot? Ever given a traffic ticket for failure
to stop (that was a rolling stop - you didn't stop) when you darn well
DID come to a complete stop and you know it? The problem is that some
local governments will smell money. If politicians smell money, kiss
it good-bye! You can bet the enforcement will be spotty, uneven, and
in some cases unfair. In many areas, life will go on as ever. Heaven
help you if you live in one of the areas where they decide to make
money by issuing tickets! Well, the legality of roadblocks has been
decided (good idea to keep the drunks off the road) - next, will it be
a radio check? (hey, let's get all the modified radios off the air!
Gee, what a good idea - especially if the locals can fine you a couple
hundred bucks!). Gee, maybe they can lower taxes some more! (I wonder
where all this buget surplus came from? My guess is the tobacco
settlement and raising cigarette taxes is not hurting the equation
any). Sorry for the length of the post, but I do have a concern here.
Thanks for letting me gripe!

73s from Rochester, NY

From: Dave or Debby <truth@planetc.com>
Message-ID: <39d7747a@news.planetc.com>
Source record: 53986

You people seem to know NOTHING about antenna engineering & design. The answer to the question is that the FIRESTICK is better. Actually the 5 1/2 Francis is even better. WHY? It is LONGER AND the COIL (load) is up HIGHER, which makes it work better. Granted the WILSON is better for taking MORE $$$$ out of your pocket, but IF you want performance and the low cost, you'll buy a Francis 5 1/2' antenna, and it will be better than ALL of the above!!!
Dave!!!!!!!!!!!!!!!!!!!!

sideband wrote in message ...
Todd:

I wasn't comparing the SilverLoad to the 5000. I was simply pointing out that, in my experience, the firestik CAN be beat, for about the same money.

There is no question that a base loaded steel whip antenna will outperform a helical wound fiberglass. The 5000 will outperform the SilverLoad and the Firestik, hands down.

-SSB

>KG8PM
>http://www.mindspring.com/~helmsman

1==> Doubt if it is that easy to "fix" actually. Glazed ceramic
insulators would be pretty good when newly installed, but get coated
with dust, various salts from various sources, pollution, develop
micro-cracks in glazing, etc. All these provide high voltage leakage
paths to earth from miles of wiring which makes an excellent radiator.

In Australia, primary transmission is usually 330 kilovolts [kV] or
330,000 volts. Secondary transmission lines are usually from 132 kV
to 66 kV, and high voltage distribution lines from 33 kV to 11 kV.

So it doesn't take much leakage somewhere to produce a fair bit of
broadband interference, but for most people this isn't a problem.

2==> The first main problem with "fixing" leaky insulators is to find
the faulty one, which isn't that easy unless there is enough leakage
to cause a visible discharge. If caused by accumulation of dust and
salts, possibly only a problem in high humidity conditions. Enough
wind driven rain can wash surface contamination off, temporarily

clearing the condition.

3==> The second & third problems is that even if did find it would usually involve closing down the line to replace it which would usually involve a fair number of service interruptions and greatly increased line maintenance costs.

4==> The fourth problem is that although only a tiny proportion of customers are bothered by interference, most are bothered by increases in costs of electrical power. Would the majority of users be willing to pay, say, twice as much for their electrical power just to reduce or eliminate interference that only bothers a small percentage of users? Very doubtful.

5==> Then too, insulators aren't the only problems. Line fuses, cable clamps, etc. can become corroded, causing minor sparking. Again, at voltages involved, enough to cause interference, and again difficult to find.

There are often problems on customer premises that radiate interference back on to the supply lines. TV, microwave ovens, welders, various sorts of industrial & medical equipment, etc.

6==> Basically, it all comes down to cost effectiveness. I suppose it would be possible to produce a PTFE ["Teflon"] coated insulator which would be far superior to a glazed insulator, as nothing sticks to PTFE. However, the cost of such insulators would be much higher than glazed insulators, and the cost of replacing all the glazed insulators on a system with PTFE coated ones would be very high.

Placing all power lines underground would probably help a lot as well, but this isn't a cheap solution either.

7==> A minor warning: Suggesting any sort of government regulation of private enterprise for any purpose on misc.survivalism will cause some members to foam at the mouth and reach for their keyboards to issue scathing and highly critical replies. ;-)

Insulators are extremely easy to replace here on the suncoast. Takes them almost no time at all and it is done routinely. Power company has knocked on my door 3 or 4 times to request access through my gate to get at a pole located adjacent to my easement in the past 5 years. A dirty insulator gives me a static-like noise and a constant signal swinging from 3 to 7 over and over repeatedly in a perfect pattern. I have noticed on occasion a heavy rain can reduce interference, but it never cured it. Also, my older rigs are more prone to this interference than are the newer ones.

Huh? I never mentioned the legality issue Gary. What I was said that given the hugh number of problems we have in this world, sitting at home monitoring 10 meters in the hopes of snitching on truckers is at the bottom of the list of things one can do to contribute to society.

I read every word, Phil. I just don't see much worth reading. In the end, your solution is more funding for the FCC. But, in these days of federal budget cuts, that has absolutely no change of happening. So, if the FCC is not able to solve the problem with its existing budget, then we have to look elsewhere. That is, unless you can come up with something better (that includes something better than more funding).

The guy is probably using something other than a stock CB and most people who are running high power should kindly offer to eliminate any interference they might be causing. I would suggest you offer him a 12ga or maybe .308.

Thanx for setting me straight, I really appreciate your input. So which is it? The firestick or the francis? Make up your mind Dave or Debby? How many times have I suggested to people to check the cut-away views of these antennas for themselves. You can see the quality, this isn't brain surgery. If you want low cost, you'll get low cost.
I'm not knocking Firestick, Francis, or Wilson. I'm just saying you get what you pay for. There's no way a 20 gauge wire is going to outperform a solid 6 gauge heavy silver plated copper wire. How can you claim to know something about antenna design and engineering? The only accurate thing you said was that the longer antenna is a better performer. The Firestick is not the top performing top loaded antenna, there are a few others out there that will do better. You can't have low cost and top performance.

The very people who would give this authority to the locals are
the ones who set up the situation where the FCC was prevented
from doing its job.

Remember the story about the farmer who was very upset because
he was expecting his horse to do all the work with less and less
feed and eventually the horse dropped dead after the farmer got
him to do all the work with no feed?

The typical threat of the congress-rep is "do what I want you
to do or we will cut you off at appropriation time". I've
actually had a local congress-rep tell me that face-to-face
regarding a case that I was supervising involving a constituent.
I tactfully rreminded him that the other party AND all of the
investigators including myself wrre also constituents of (and
voters for) him.

This is the exact situation with respect to the Finegold Bill.

Don't let them get away with that sort of flim-flam. Make them
fund the Commission to do its job properly.

> And I know that you feel that you're superior to local law enforcement
>officers (you have knowledge they don't), but these people already
>enforce a wide range of laws, so it is really not that much of a stretch
>for them enforce the rules concerning CB either.

Nor is it much of a strech of the imagination to train an FCC agent
to investigate auto thefts (the FCC sends field investigators
to the Federal Law Enforcement Training Institute or conducts
equivalent agency training).

It's just not their job. It's that plsin.

Granted that there is a provision for the manufacture for sale of amplifiers
not being capable on 11m, that wasn't raised in the thread. What was raised as
the issue was possession of such being illegal (as opposed to use).
Furthermore, the manufacturing ban isn't in Part 95 or 97 - it's in Part 2.

>KG8PM
>http://www.mindspring.com/~helmsman

1==> Doubt if it is that easy to "fix" actually. Glazed ceramic
insulators would be pretty good when newly installed, but get coated
with dust, various salts from various sources, pollution, develop
micro-cracks in glazing, etc. All these provide high voltage leakage
paths to earth from miles of wiring which makes an excellent radiator.

In Australia, primary transmission is usually 330 kilovolts [kV] or
330,000 volts. Secondary transmission lines are usually from 132 kV
to 66 kV, and high voltage distribution lines from 33 kV to 11 kV.

So it doesn't take much leakage somewhere to produce a fair bit of
broadband interference, but for most people this isn't a problem.

2==> The first main problem with "fixing" leaky insulators is to find
the faulty one, which isn't that easy unless there is enough leakage
to cause a visible discharge. If caused by accumulation of dust and
salts, possibly only a problem in high humidity conditions. Enough
wind driven rain can wash surface contamination off, temporarily
clearing the condition.

3==> The second & third problems is that even if did find it would
usually involve closing down the line to replace it which would
usually involve a fair number of service interruptions and greatly

increased line maintenance costs.

4==> The fourth problem is that although only a tiny proportion of customers are bothered by interference, most are bothered by increases in costs of electrical power. Would the majority of users be willing to pay, say, twice as much for their electrical power just to reduce or eliminate interference that only bothers a small percentage of users? Very doubtful.

5==> Then too, insulators aren't the only problems. Line fuses, cable clamps, etc. can become corroded, causing minor sparking. Again, at voltages involved, enough to cause interference, and again difficult to find.

There are often problems on customer premises that radiate interference back on to the supply lines. TV, microwave ovens, welders, various sorts of industrial & medical equipment, etc.

6==> Basically, it all comes down to cost effectiveness. I suppose it would be possible to produce a PTFE ["Teflon"] coated insulator which would be far superior to a glazed insulator, as nothing sticks to PTFE. However, the cost of such insulators would be much higher than glazed insulators, and the cost of replacing all the glazed insulators on a system with PTFE coated ones would be very high.

Placing all power lines underground would probably help a lot as well, but this isn't a cheap solution either.

7==> A minor warning: Suggesting any sort of government regulation of private enterprise for any purpose on misc.survivalism will cause some members to foam at the mouth and reach for their keyboards to issue scathing and highly critical replies. ;-)

One didn't need PC's for remote control of irrigation pumps, mate.
Are talking about simple tone control, and well within the technology
of the time, although not as easy to implement as it is today.

However, if you would like to challenge me on this issue, think that
could probably dig up some information on how tone control circuits
were available even before CB was available, or was here at least.

No need for even the technology of pocket calculators, let alone PC's.
:-)

AFIK, "tone keys" have been legal for a long time, at least on
commercial 2 way equipment, were legal on amateur equipment, and
possibly even on CB gear.

However, permission for "selectacall" operation doesn't mean that
could use code for messages.

AH. And you are mistaken about that radio. When is the last time you heard a licensed operator of the 10m band use a roger beep. That radio doesn't even have repeater offsets so maybe I shouldn't have included it in the list per my post but it is still a wanna-be radio.

:-)

I don't agree this problem is related to budget cuts. This problem started in the mid 70's, long before budget cuts became common. Therefore, I think it is disingenuous to blame Congress for this. No, the fault for this one lays clearly at the FCC's feet. They turned their backs to this problem in the 70's, when they could have enforced it. And now the problem is out of control.

> Without a massive hiring/training of agents, they would never be able

And, as I said in the previous message, I don't think most Americans would want
to see another hugely expanded enforcement agency in Washington (too many cops already). Therefore, the only solution is local enforcement (where the cops already exist). Again, all this was said in the previous message, so see that message for more details.

Please take the following with a grain of salt. What I'm about to say
is my opinion, based on my experience.

A solid mount (read: scew holes into the ground plane) generally
outperforms a magnet mount.

For the watts you're planning on running, you will see little
difference between the 1000 and 5000. That little bit is what some
people are after, so if you want to spend the money, the 5000 will get
you a slight performance increase.

102" whips have their merits as well. Will a 102" steel whip
outperform a 5000? Who knows? On the same mounting point, probably
not. If the 5000 is mounted on top of your cab, and the 102" is
mounted on your bumper or truck box, who knows? You won't be able to
tell until you try it on your vehicle.

the Wilson 1000/5000 is probably easier to install and tune, and both
will hold the watts you want to push. The 102" whip will likely be
more difficult to tune and install, and will hold the watts you want
to push, provided it's properly installed.

Will you be able to tell the difference? Not unless you try both on
your vehicle for your installation.

Just my two cents. Your mileage may vary.

Another fine example of Stan's posting of material that is non-offensive
and non-abusive and totally relevant to this NG.

Yes, some guys are jerks. Get the Radio Shack ferrite torroids and wind the speaker wire through it as many turns as possible, and as close tothe speakers as possible. This will absorb much of the rf.

Once LEOs begin to take over a large chunk of the enforcement effort
for CB, the money for mentoring and assistance can come from what the
FCC would have spent on that enforcement effort.

And I seriously doubt that the production of a couple of guidebooks,
with a system to answer phone calls seeking clarification, would cost as
much as the salary, and transportation, of the many employees that will
be needed to enforce CB today (especially with the massive problems that exist).

Actually, since we're talking about money, local enforcement could
turn out to be a great bargain for the taxpayer. For example, instead
of spending money to transport FCC agents around the country to
investigate complaints, that money could be spent elsewhere (such as on
better enforcement of "pirate" operations around the CB frequencies).

well that depends on the size of the wire that is used inside the fibergalss....I don't think I would try to put that much power in one of them.... a 96 or 102 steel whip would be your best bet and a bunch cheaper also.... how ever the wilson is a top of the line antenna and can handle that kind of power easily.

I have a small 100 watt mobile linear AMP for sale. Model "RMS K180". Works on AM/FM and SSB. Asking $70 for it. Email me if you wish to see a picture. The amplifier works fine, but is being sold "as-is".

Thanks,

Richard.

A bigger alternator. It doesn't matter what size the battery is if you use the battery when you key. Of course larger is better. Stay away from Exide batteries. I've gotten about 42 months out of two. I'm going for an Interstate today. (I also have a 125 amp alternator that holds 14.5V at full draw with a 667V. [about 70+ amps!])

1. No. In the USA, they are mounted on the left side so they hit less trees.
2. As much as possible. You may want to get a 7 foot antenna because they work so much better than a 4 footer.

Hee,
then you need a little history here.
some 17 years ago, a freind of mine was gunned down in front of a house.
He had gone over to tray and talk some sense into a CB'er that was
making threats against everyone one the air.

The problem was: he went over there armed with a piar of
wire snips... He was shot dead in front of the house and
his body was dragged into the interior by the shooter.

The shooter was caught, tried and convicted on murder charges.
to this day, there si still speculation as to why this friend of mine
went over to the cb'ers place to begin with.

Point is: even if you don't get caught by the authorities,
you may be caught by an anger homeowner who doesn't care about
anything except that he has a threat sitting before him.

One way or another you will (not may) get caught.
Believe me, I have seen it happen way too many times here in Phoenix.

106TH CONGRESS

REPORT

HOUSE OF REPRESENTATIVES

2d Session

106-883
STATE AND LOCAL ENFORCEMENT OF REGULATIONS REGARDING USE OF
CITIZENS BAND RADIO EQUIPMENT

SEPTEMBER 22, 2000- Committed to the Committee of the Whole House on
the State of the
Union and ordered to be printed
Mr. BLILEY, from the Committee on Commerce, submitted the following
R E P O R T
[To accompany H.R. 2346]
[Including cost estimate of the Congressional Budget Office]

The Committee on Commerce, to whom was referred the bill (H.R.
2346) to authorize the enforcement by State and local governments of
certain Federal Communications Commission regulations regarding use of
citizens band radio equipment, having considered the same,
report favorably thereon without amendment and recommend that the bill
do pass.

6

PURPOSE AND SUMMARY

The purpose of H.R. 2346 is to improve enforcement of Federal Communications Commission's (FCC) rules governing Citizens Band (CB) Radio Service. Today, a small number of people are using their CB radios in a manner not permitted under the FCC rules. Such behavior is causing unnecessary and harmful interference for other people using radio devices operating in nearby spectrum bands, including consumer telephones and televisions. The bill would delegate authority to State and local governments to enact and enforce a statute or ordinance requiring users of CB radios to comply with FCC rules, thus providing an additional enforcement compliance mechanism.

BACKGROUND AND NEED FOR LEGISLATION

Summary and FCC rules covering CB Radio Service. Citizens Band (CB) Radio Service is a two-way, short-distance, voice communication service for use in personal and business activities. CB Radio Service can be extensively helpful during emergencies or other times when traditional communications techniques are failing. The distance of the communications from CB radios can range from typically one to five miles. Users of CB radio equipment are not required to obtain individual licenses from the FCC, but users are allowed to only use an unmodified FCC certified CB unit (one that has an identifying label placed on it by the manufacturer). This differs from similar services, such as amateur radio services, which do require individual licenses for operation.

CB Radio Service is governed by Subpart D of Part 95 of the Commission's Rules (47 C.F.R. 95.401 et seq.). These rules include (but are not limited to): restricting operation within frequencies 26.965 MHz and 27.405 MHz (40 channels, spaced .01 MHz apart); prohibiting the use of power amplifiers; restricting some types of speech (e.g., obscene or indecent); prohibiting the payment for use of a CB station; restricting the length of communications (i.e., 5

continuous minutes with a one minute break before restarting communications); limiting the height of antenna to no more than 20 feet above the building or tree it is mounted on; prohibiting the operation of CB Radio stations by remote control; and conditioning the connection of a CB radio to a telephone.

FCC Enforcement. The newly created Enforcement Bureau of the FCC is charged with ensuring that the FCC rules are obeyed and taking remedial action when the rules are not followed. Specifically, the mandate of the bureau accordingly to the FCC is to: execute on-scene investigations; conduct inspections and audits; immediately respond to safety of life issues; investigate and resolve interference; and investigate violations in all communications services. In order to conduct its work, the Enforcement Bureau maintains offices throughout the U.S. to serve as local point of contacts and operation points for FCC staff operating in those locations. The FCC has three Regional Offices, 16 District Offices, and nine Resident Agent Offices located across the United States. The FCC's three Regional Offices, covering the Northeast, South Central, and Western regions of the nation are located in Chicago, IL, Kansas City, MO, and San Francisco, CA, respectively. The 16 District Offices are located in Atlanta, GA: Boston, MA; Chicago, IL; Columbia, MD; Dallas, TX; Denver, CO; Detroit, MI; Kansas City, MO; Los Angeles, CA; New Orleans, LA; New York, NY; Philadelphia, PA; San Diego, CA; San Francisco, CA; Seattle, WA; and Tampa, FL. The nine Resident Agent Offices are located in Anchorage, AK; Buffalo, NY; Honolulu, HI; Houston, TX; Miami, FL; Norfolk, VA; Portland, OR; Saint Paul, MN; and San Juan, PR.

Violators of FCC rules governing CB radios are subject to orders by the FCC to stop whatever action caused the violation. Further, the FCC can impose monetary penalties that includes up to $10,000 per violation for willfully and knowingly violating FCC rules (up to a total of $75,000). The FCC, including its field agents, have the right pursuant to section 303(n) of the Communications Act to conduct inspections of radio installations without a search warrant.

According to the FCC, in order to report a suspected violation of FCC rules pertaining to CB Radio Service a written document must be submitted to an FCC district or field office closest to the complainant. The submission must include specific facts to support the alleged violation. Further, the FCC has made clear that reported violations may be investigated, only as time, manpower, and priorities permit. The FCC has also indicated that it will only investigate CB violations where there is a convincing evidence that results from a violation of the rules has occurred and then only on a low priority basis.

Need for Legislation. While much use of the CB Radio Service is valid and commendable, a number of individuals have taken advantage of the unlicensed nature of the service to operate outside the boundaries of FCC rules. In particular, a recurring problem is CB users boosting

signal strength in order to reach a greater area than the one to five mile coverage area. Further, some CB users operate outside the permit frequencies allocated for CB Radio Service. When these violations occur, unexpected and potentially harmful interference can result for users of other services. Given the wireless nature of CB Radio Service and the intermittent broadcasts by CB radio users, it is often difficult to catch rogue CB radio users operating outside the FCC rules. However, individuals suspecting interference by rouge CB radio users often are forced to deal with the problem repeatedly. Many people believe that the FCC has not given the problem and the nuisances that rogue operators create significant priority and resources. Thus, creative solutions, such as the one contained in H.R. 2346, have been proposed to reduce violations of the FCC's CB Radio Service rules.

Empowering State and local governments to enact and enforce statutes and ordinances requiring compliance with FCC rules on CB radios will only improve compliance with FCC rules and prevent needless interference caused by those who feel they are not obligated to follow FCC rules. State and local government action will complement and should not be a substitute for the FCC enforcing its rules.

155. Re: Need info on Battery size with Amp?

Newsgroup: rec.radio.cb

Are you going to be doing your talking while the car is off or turned on .. .if it is used more when vehicle is off then a battery with a longer reserve would be the better choice.. . A 1000 cca battery with a good alternator wil be more than enough.. Your amps should only draw 45 amps under full modulation otherwise lower the dead key of the radio into amp and you will draw probaly 1/2 the amps on deadkey and it will swing the amp meter forward when you modulate

One of those 50,000 volt stun guns also work pretty good , and only leave a small scorch mark on the wire .

but seriously , like someone else said , file a disturbance complaint on him , and keep at the FCC , talk to your other neibors too , the more complaints they have the more of a chance you have of getting them out . It also helps is one of your other neibors is a business . If it interfere's with there business all off the authorities get a bit more serious

Good Buddy went out in the 70's. Not to mention I do not listen to the truckers channel. Personally though, I think a trucker sounds "cooler" than a bunch of nerdy sounding voices like I hear on 2 meters. Some of those guys act like they did on Christmas at age 7 with their new "Walkie-Talkie" "back to headquarters, to pick up my XYL, over"
Just my opinion. Maybe I just liked the movie Convoy.
I do not lie.

Hi All,

Recently I came across a few Starduster/Skylab Base CB Antennas and ordered several for me and my friends. I sold all of them but one as one guy who I ordered for backed out.

Anyway, I'll sell it, new in the package, delivered USPS Priority anywhere in the US for $63.00.

I can accept PayPal or if need be will wait for payment.

First come, First Served.....so if you are interested, e-mail me now.

Thanks and Have a Great Day,

Mike - Cape Coral, FL

> transmitters, therefore not their problem.

In the States, Part 15 of the FCC regulations does place restrictions on devices that, while not designed to transmit radio signals, do incidentially radiate. The regulations are sporadically enforced.

Two good examples: Computers, which must be qualified either for residential (less radiation) use or commercial use. The Commission has been known to prosecute the import & sale of unqualified computers. But an awful lot have gotten through & been sold. And, cable TV systems, which are required to keep their signals in the cable. Systems have been required to suspend operation when excessive leakage has interfered with other services - usually aircraft communications, but in at least one instance amateurs. Actually, these are much better about compliance (I suppose they don't want to risk the nightmare of being blamed for an airplane crash!) though they have defacto reallocated 145.25mHz out of the amateur service...

Anyway, incidential radiators *are* theoretically the FCC's problem. It's just that they don't assign them a very high priority.

using the forum rec.radio.cb did say:
:
:Unless you are putting out QRO power levels DC rsistance of the antenna has
:little to do with losses. The impedance of the antenna is minimally in the 50
:ohm area so the couple of ohms DC you find in even the most resistive antennas
:is totally insignificant. There may be other things that make one antenna worse
:than others but you would just about have to make the antenna out of a wet
:string before ohmic losses were a big part of it.

hamm:

THanks, I couldn't have said it better myself.

Another thing to point out, however. There's alot more wire on those
helical wound fiberglass antennas than you think. If you're concerned
about DC resistance, just remember, a firestik has alot more than 102"
of wilre in it.

I have a Radio Shack SSB TRC-451. It powers up, recieves cahnnels, but I cannot seem to get it to transmit at all. Is there anyone in the Athens/Huntsville, Alabama area that could look at it for me?

I won't argue that one, but will instead draw your attention to Article 1, section 9 of the Constitution, which says "No Title of Nobility shall be granted by the United States;...." A title of nobility is more than just something one attaches to one's name, like "lord"; rather it implies and conveys certain priviledges. Thus my Ham license, or any other license, that conveys priveledges reserved to some but denied to others is unconstitutional .... right?

For more good topics to argue about go to www.findlaw.com.

If you have room for a 102" whip go for it. Some radios work better with different antennas. The only way to tell which is going to work best for you is to try them. You also have to consider clearance for over-hangs, garages, etc. I'd go to the Wilson web site or a good cb store and look at the cut-away views of the 1000 and 5000. You can see the quality of the 5000 compared to the 1000 and you'll be able to see for yourself that the 5000 is the better antenna. You could also get a trunk mount to mount on the hood of the truck to avoid drilling any holes. On my truck the hood is higher than most car roofs and it works fine.

While the latter part of the above is certainly true, I'm not so sure about the first part. Part 97 of the FCC rules deals with the amateur service (only?) and 97.315 with RH amplifiers. For those interested, the full text is at

<http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=97&SECTION=315&YEAR=1999&TYPE=TEXT>

Question is, does part 97 apply to non-amateurs?

For example "(b) Any external RF power amplifier or external RF power amplifier kit (see Sec. 2.815 of the FCC Rules), manufactured, imported or modified for use in a station or attached at any station must be certificated for use in the amateur service in accordance with subpart J of part 2 of the FCC Rules...." Subpart J of part 2 deals with emission standards and the text goes on to say what amateurs can and cannot do (e.g. build one/year, etc.).

> *licence .

I cannot speak for "all hams" but my objection to locals enforcing FCC rules is that few police have the training to do so. If my legal transmissions are interfering with my neighbor's TV I may help him with *his* problem out of the goodness of my heart but I am not obligated to do so and if he calls FCC to complain an FCC engineer who knows the rules and technical standards will explain that to him. OTOH, if he complains to the local Town Clown I'm likely to have the SWAT team rampaging thru my shack and if you think that's over-paranoid check with some of the gun owners' associations. I'd rather not have my shack machine gunned by some twerp who wouldn't know if I was operating legally or not.

> **********
>
> You are correct here. A ham operates outside the Ham bands can lose equiptment
> and most likely his/her own license. But really that doesn't bother most hams....

That's misleading. General FCC policy is to send the ham a letter notifying him of his apparent violation, demanding an explaination and asking what he plans to do th assure it doesn't happen again. If he fails to respond with a satisfactory answer, and/or continues to violate the rules then they will indeed hit him like a ton of bricks.

There is good reason for this: most hams do obey the rules so a violation is most likely unintentional. The same isn't true for CB violations.

I've monitored a lot of illegal CB-DX. Most of what I've heard is just as organized as I hear on the amateur bands. The serious CB-DXrs are using most of the rules that hams use. So, why not get legal and quit having to worry about an unwanted FCC visit??

OK, let's do the real world now...

Power required to light all those tubes...? (more than reaching the antenna)

Individual parts count cost..? (way out of line)

Ease of tunning..? (no!)

Linear operation..? (no!)

Easily replace the entire nightmare circuit with one large clean running tetrode..? (yes!)

Stay out of entire cities' consumer electronic devices..? (no!)

Effective signal..? (no!)

Reliability..? (little to none)

Guy down the road with a better sounding system running 1/10th your consumed power, making you look real bad..? (99.6%)

Amount of time before an authority shows up on your doorstep..? (less than a few days)

Amount of money wasted..? (much)

Impressive to technical types..? (no)

You become a laughing stock on the airwaves ..? (about 4.3 minutes)

Runtime before 1st big failure..? (about 8 minutes)

cheers
skipp

> outperform a helical wound fiberglass.

Hmmmm ... that's not what I learned in school OM. Wire has resistance. Resistance is bad in an antenna and the more current that has to flow thru it the more power gets lost as heat ve being radiated. Thus a base loading coil eats up more signal as heat because current is highest at the base of the antenna. It follows that linear or top loading is theoretically better if the wire is the same diameter & resistance. Of course it seldom is so YMMV.

Dunno about the 2510 but I gotta assume you're trolling 'cuz anybody who believes that is too stupid to be on the internet. The XYL and I tried talking on her way to work on 10m ssb. We'd loose contact whenever she went over a particular hill less than 10 miles away even tho she ran 400w QRO and I had a KW ERP! So we'd switch to 5 watt 2m handi-talkies and continue our QSO via a repeater.

The real problem is not so much getting there with 12W, thats easy...
the real problem is blowing through the goddam pileup of all the other
guys trying to talk to europe. I've lost count of the amount of
times that I was in unintentional competition with some guy from
across the state, trying to get to the same station I was trying to
make contact with.

Although I do have a friend who talks all over the place with a ground

plane antenna and 12 watts or so, and to top it off he runs an OLD
realistic SSB base... amazes me that the guy gets everywhere with the

thing. It must be his location, and/or his antenna... he runs a
teepee antenna thats like 20+ years old...

Well, yes - on two points. First, I "reside" in Virginia and judges preside in courts; the FCC manages the communications spectrum for everybody's benefit. Being human, they make mistakes but what's the alternative??

Second, the spectrum is public property, just like public land. The government does not allow obnoxious people to erect billboards blocking the view of the Grand Canyon, build cardboard shacks on interstate medians, nor interfere with TV stations, or TV stations to interfere with emergency channels, etc., etc.. Who should manage public property if not the government? Should I be allowed to burn down the Redwoods because I wanna see the fire or prevent 1000s of people from watching football because I wanna talk to my piasano in Italy? Get outa here ....

Sideband's right: the only way to tell is to try both. The 102" whip would be better if all things were equal - but they never are. Besides the factors Sideband mentioned there are things like how much the antenna bends and/or flutters in the wind. Don't be afraid to try: for many half the fun is getting there! Check out the arguements on <rec.radio.amateur.antenna>.

Unless you are putting out QRO power levels DC rsistance of the antenna has
little to do with losses. The impedance of the antenna is minimally in the 50
ohm area so the couple of ohms DC you find in even the most resistive antennas
is totally insignificant. There may be other things that make one antenna worse
than others but you would just about have to make the antenna out of a wet
string before ohmic losses were a big part of it.

Unfortunately, it is necessary. Were there traffic cops back in the 1800's? Why are traffic cops necessary? Why stop lights? The reality is that we need some sort of standard rules to play by or we would not be able to depend upon cell phones, radio, television, garage door openers (at least the RF ones), anti-theft devices, and a whole raft of other things - not the least of which would be overseas telephones (satellites, remember?). We do need some kind of rules to live by simply because with the number of inhabitants of our world (is it 6 billion now?), chaos would rule otherwise and no one would have any effective use out of most any communications devices.

I have a HAM International Multimode II Export Radio for auction on Ebay.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=456138947

The radio has 120 channels arranged in 3 banks of 40, AM/FM/USB/LSB and RX/TX clarifiers. The TX clarifier will shift the TX frequency approx. +/- 5Khz. A picure of the radio is on the auction page. Works great but sold "AS-IS".

Thanks for looking,

Richard.
(Please remove the "NOSPAM" if replying via email).

He may have been, but that thread isn't in this (Rec.rad.amat.policy) NG and this is where I was following this thread from.. I had to look through the others to even find what you were talking about. That's like having a conversation with your wife at night and getting pissed at your friend at work the next day for not following the conversation. I don't have time to read all the news groups and I have no idea which ones you read so unless all relevant threads are crossposted to the same places it is possible you read something this num-nut didn't.

206. www.ab7sl.com - 1 YEAR OLD !!

Newsgroup: rec.radio.cb
Date: 2000-10-02 00:00:00 UTC
From: Charles <charles@ab7sl.com>
Message-ID: <8raufh$79v$1@nnrp2.phx.gblx.net>
Source record: 54278

Greetings to all,

As of October 5 ,2000 www.ab7sl.com will have been on the web for a full year. This is a real milestone in the site's existence. www.ab7sl.com started out this time last year with 0 (zero) visitors and now has almost 16,500 visitors on the counter. The average visitor count per day is now at 55 visitors daily . There are nearly 100 entries in the guestbook now and several dozen user-added links on the Free-for-all-Links Page.

Many features have been added since the basic site went up last year. One of the most popular is The DX Page with the active and clickable DX Cluster Telnet links. I have received a lot of positive feedback on that. Another recent feature is the addition of the AB7SL Monthly DX Online Logbook. This page receives several updates - each day - depending on my activity and band conditions. It lists chronologically all the DX stations I have worked for the current month.

The most recently added page is the 3D-Art Gallery which showcases 3D art I have created with Bryce 3D graphics application. Besides the thumbnail for each image there are two popular resolutions available for download that can be used as desktop wallpaper.

www.ab7sl.com has grown tremendously over it's first year and I look forward to sustained and increased growth over the years to come. Thank you all for making www.ab7sl.com a great success for me and all it's users.

73 / DX

My experience on my truck has been that a full length antenna on the tool box gets out better than a short antenna on the cab. The exception to this is that the short antenna gets out just a tad better toward the front of the truck.

My cousin tried it in his Cessna a couple of years ago. It aways sounded like skip was up no matter when he tried. A lot of the channels had no activity but all the rest had too much. He eventually settled on putting a Sience Aire in his house to talk home on.

That would be manufacture would it not? That would not be a type accepted piece of equipment.
"Non amateurs are specifically prohibited from building or modifying amplifiers capable of operation below 144 MHz without FCC type acceptance [97.315(a)]." page 29.8 ARRL Handbook 2000
edition. So once again, possession indicates a law had to have been broken either by manufacture or sale. (unless of course you think they are being handed out on street corners
for free or there is a linear fairy)

Source record: 54284

How exactly do you get all those tubes to operate properly in parallel?
Paralleling tubes has the downside of increasing input/output capacitance
and stray inductance, lowering efficiency and causing a tendency toward
spurious oscillation. 8 3-500's in parallel GG would make for a nice
induction heater or AM broadcast amp, but would be hard to operate
(efficiently or cleanly) at 27 MHz.

Well this is what happened. This guy who used to go by the handle '925' out of hawaii advertised a 16 pill box for sale on this ng for the amount of $750.00. I was looking for one so I contacted him about it. I was a little hesitant and I wished I had listened to myself and not sent the money but this idiot calls me and talks to me for about three hours and after that he sounded like a nice guy and all that and he promised this was a legit deal. Well needless to say , the money was sent, he says he got it and then he did not ship me the box. So what do I do now? You don't know anyone in Hawaii do ya?

Hey Bubblepuppy, I can try to find out more information for you on your box or even returning your money. Have you tried calling his house lately or after this incident happened to discuss the situation? I bet you did but he changed his number or something like that right? I can see what I can do on my end because Little John gave us Hawaii guy's a bad name. I want you to remeber this isn't entirely his fault, you should've told him to send it c.o.d. no matter how nice he sounded or acted. But what is done is done the only thing else that can be done is to get the box or get the money back. I'll try to get in touch with him to see what's up.

An antron 99, maybe a Copper 7' 10K Nightstick. With all due respect, 50 miles 0n 2 watts? Swinging too? Your running a tuned up rig that's putting out more than 2 watts. I'm not putting down firestick, if you have room for a 7 footer, GREAT! I like to park my truck in the garage at night and have trashed too many 5' + firesticks in the back country. My Wilson 5000 will eat my firestick for breakfast. I used firesticks for years. I'm not knocking anybodies rig. The facts speak for themselves. My Wilson will take more abuse than any firestick and keep on ticken! WHY? Because it's made better. I've talked 50 miles barefoot, when there was skip on both a firestick II 5' and my Wilson 5000. Your right "for the price it can't be beat", BUT IT CAN BE BEAT! if your willing to spend more and get better equipment.

Try an Anttron 1700! At $22.00 dollars it is a best buy. In case you
are not familiar with the design, it is 2' wire wound fiberglass with a
4' steel whip. It solves the the need for garage entry and can take a KW
of power. Why it performs so well, I am not sure, but it does perform
better than a Wilson 5000 or a fiberglass of equal length. I have used
them all through the years.

Both times I talked to Australia from my mobile, I've been pointed west.
Looking at a globe, I took the long path around.

On AM, it was very late at night (or early in the morning), so I got a good ground wave. (From Baltimore to a little below Annapolis). On SSB, I was in PA near I-83 and the MD line, to several stations scattered around. (Thurmont, Westminster, Mt. Airy, Sykesville and back to Baltimore.) I've even talked to Skyline Drive, Cherry Hill, NJ and a military transport plane that flew overhead and flashed his lights for me at 35,000 feet. All mobile contacts. Won't talk about skip...

1. I am not the one advocating spending time, effort and money to harass a statically insignificant group of "outlaw CBers" on public NGs while there are many important social issues go unfunded.

2. Since you asked, I give time and money to Easter Seals and the Salvation Army among other deserving causes.

3. I haven't a clue how to modify a CB nor do I have any interest in leaning.

4. You may be pleased to know that as far as I am concerned any further time devoted to responding to your silly posts is wasted.

>horrible job of it in the 80's, and hardly anything at all in the 90's.

That's because The Congress, by its penury and by retaining in
place ineffective agency leadership, has in essence told the
FCC "do not spend one nickel on CB".

The troops can do the work.....they have been prevented from
doing it.

Don't you read what I post?

Unfortunately for me, the guy isn't local, so I won't have a chance to pop the top and take a look until after I've purchased one.... guess I'll go ahead and pick one up, worst case is it might sound shitty or something, so I could always turn around and sell it on ebay and probably get most of my money back that way, and he claims to give a 30 day money-back guarantee anyway...

Got another question: I've never run any power before, and I'm using a 102" fiberglass antenna (unknown make) that a buddy gave me (no load). Is it likely that this type of antenna will withstand the 950w? Or do I have to go out and get one of those fancy Wilson 5billion's?

Section 15.17 Susceptibility to interference.

(a) Parties responsible for equipment compliance are advised to consider the proximity and the high power of non-Government licensed radio stations, such as broadcast, amateur, land mobile, and non-geostationary mobile satellite feeder link earth stations, and of U.S. Government radio stations, which could include high?powered radar systems, when choosing operating frequencies during the design of their equipment so as to reduce the susceptibility for receiving harmful interference. Information on non-Government use of the spectrum can be obtained by consulting the Table of Frequency Allocations in ï¿½ 2.106 of this chapter.

(b) Information on U. S. Government operations can be obtained by contacting: Director, Spectrum Plans and Policy, National Telecommunications and Information Administration, Department of Commerce, Room 4096, Washington, D. C. 20230.

Section 15.19 Labelling requirements.

(a) In addition to the requirements in Part 2 of this Chapter, a device subject to certification or verification shall be labelled as follows:

(1) Receivers associated with the operation of a licensed radio service, e.g., FM broadcast under Part 73, land mobile operation under Part 90, etc., shall bear the following statement in a conspicuous location on the device:

This device complies with Part 15 of the FCC Rules. Operation is subject to the condition that this device does not cause harmful interference.

(2) A stand alone cable input selector switch, shall bear the following statement in a conspicuous location on the device:

This device is verified to comply with Part 15 of the FCC Rules for use with cable television service.

(3) All other devices shall bear the following statement in a conspicuous location on the device:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Been there myself...
Well, if you've done all the shielding you can, and the problem persists,
you might consider shifting the position of the affected equipment.
If this doesn't help, then you might want to start involving the local police
in the matter (as a disturbbance report). after a few times of this,
you might actuall be able to get your neighbor to shut up for a while.

If other neighbors are having the same problem, have them all get together and
sign a petition in local court to have his "on-the-air" activities limited
(by court order). once you have copies of the police reports in hand,
you may also petiton the courts to require the FCC act on your behalf
to investigate the problem (A writ of man-damis).

you might also call up the local amatur radio club and see if they can help you

with the problem (they might consider it outside their bailiwick, but then
again,
they might also consider it good Public Relations and help you).

Just a few suggestions from a ham (and former CB'er)

DE N7ZZT

Such an action is considered "criminal damage" or "vandalism" and
may get you in serious trouble with both the affected party and the
local law enforcement.

The recipient of the "damages" can also sue for liability under civil law
(and I doubt your homeowners insurance would be willing to cover
you after such a prank).

also, your statement here could be considered "inciting to violate
law" which is an even more serious offense (its a FELONY!).

now, if you posted this as a joke, it was in very poor taste.
otherwise, you might as well be looking out the front door for the cops
as they will probably come by asking you questions about such incidents.

Exactly, and the logic of that is
self evident to anyone that gives it even a 2 second
thought process. The proposed HR2346 is
highly remiss in that it doesn't...as further
explained below.

> But, in these days of
> federal budget cuts, that has absolutely no change of happening. So, if
> the FCC is not able to solve the problem with its existing budget, then
> we have to look elsewhere. That is, unless you can come up with
> something better (that includes something better than more funding).

So then do tell us all just how
the local enforcement effort is going to get
that mentoring and assistance from the
FCC if there is NO additional funding?
Do you think that the ability to provide
such help to local enforcement agencies
is at no cost to the FCC in terms of
staff and resources?

There is NO free lunch here. Indeed, I'd
suggest that the cost to provide adequate
FCC training to LEOs is greater than if the
FCC were given additional funding for CB
enforcement by the FCC itself. Since there
is NO additional funding to the FCC to
provide LEO training and support, then we
pretty much know the level of competence
to expect from any local effort that targets
illegal CB activities.

Think about it!
Cheers,
Bill K2UNK

>>or eliminate interference that only bothers a small percentage of
>>users? Very doubtful.

>Irrelevent, it is mandated by the FCC.

2==> Obviously the FCC doesn't agree with you. :-) ...And are you even sure that your FCC is required to do anything about it? From memory, have seen something about this problem somewhere several years ago. Don't remember if the article was reprinted from a US source and dealt with your FCC or local and dealt with our equivalent.

In any case, though, the government agency involved pointed out that their job was to minimize interference between users of communication devices, or perhaps more broadly, devices designed to emit RF energy.

Their argument was that power lines, fluorescent light fittings, neon advertising signs, the neighbors welder, etc. were _not_ designed as transmitters, therefore not their problem.

Vehicle ignition systems can cause a lot of interference, especially when owners replace carbon leads from coil to distributor and distributor to plugs with stranded wire high voltage leads thinking it will "improve performance". It won't, but I doubt that there is any law against doing it.

It is possible to almost completely shield vehicle ignition systems, but I don't think that the FCC could force vehicle manufacturers to do it.

3==> However, it would be very easy to find out, wouldn't it? Contact your nearest FCC office, tell them that you think your local power lines are causing you a problem and ask if the power company can be made to fix the problem. See what sort of an answer you get and let us know.

I have heard of a mod for my galaxy 77 which uses a 1n148 and resistor.
This mod is supposed to be a very affective swing mod. It is also supposed
to be relatively simple. Does anyone have details and/or instructions??
Input??

Radio Shack sales split ferrite beads made to snap around wires, I would get one for each of the wires coming from the sub-woofer enclosure where the sub amp is. Wrap the wire around the bead as many times as possible. On the computer speakers you can try the same thing. If you can find a large bead you can put all the wires around one bead. I hope this helps, if not email me. What is the guy saying when he is bleeding on your equipment? Does he say what his handle is? What does he call him self. And last but not least what part of the US are you located in?

I pretty much have a choice of any antenna. Currently Im using a wilson 1000. My question is, is the wilson 5000 worth the extra money? Should I use a reg. 102' whip antenna?

Also, I am currently using a magnetic mount. I would rather not drill into my truck if needed however I am purchasing a truck tool box to run the upper width of my bed. I plan on mounting my next antenna on this tool box. Does anyone see a problem here, should I definetly stick with roof mount, is it worth the trouble?

I am using a galaxy 77 and will be adding a 400w amp very soon.

No challenge on the fact that tones could control different things
before CB's came about. But I distinctly remember seeing CB's with
a code keyer switch on the front and a copy of Morse code on a placard.

From: klajr2 <klajr2@swbell.net>
Message-ID: <HTtC5.973$ZF2.66947@nnrp3.sbc.net>
Source record: 54102

I have read talk about equipment grounding here. Say I have a galaxy 99 (used as a base), helper box, and a dc power supply. Should I ground these each to a ground rod?

If so do I tap into the (- dc) on the board or the metal cover of each?

If so part II ......can I run each ground wire to say a (common) gang style ground block, then a single wire from it outside to the rod?

If so part III ......is all of this really necessary if I have no TVI interference and a low swr with the setup I have now?

Your help is always appreciated!

Ken

TW,

That's just my point. Handle What? Disrespect of Cop? They were WAY away from Indiana, and I was friendly, smiling, and waving all the while.. What could the locals have done to me? I wasn't doing anything but driving down the interstate UNDER the speed limit (65-I was doin' 60). I just couldn't resist the temptation to get a "friendly dig" in on behalf of the ham that got illegally arrested in Ind. Sure, they would've loved to bust me, I am sure, for having antennas "that 'boy' ain't got no business with", and especially for the friendly(?) sar-casm. They wouldn't have had a case. To me, it's still funny.

Beaker,

When I was being facetious, I was talking about the <<geographical>>
location of Australia, not necessarily short or long path signals. You
didn't say anything about signals, you said that Australia would be
south east of Illinois, which would put Aus. in the south Atlantic.
Quit confusing me! LOL!!

Doc,

Wasn't there an article in QST about how to convert a 5/8 wave CB antenna to 2 meters? I tried to do this (must've been 15 years ago), but I couldn't get the cover off to move the center tap--which is how I vaguely recall it was to be done. I could be mistaken, tho. It's been a long time.

> FCC would have spent on that enforcement effort.

Logic alert, logic alert. The FCC isn't spending anything
now on that enforcement if you believe what you have been
saying all this time.

I will repeat my prior comments:
So then do tell us all just how
the local enforcement effort is going to get
that mentoring and assistance from the
FCC if there is NO additional funding?
Do you think that the ability to provide
such help to local enforcement agencies
is at no cost to the FCC in terms of
staff and resources?

There is NO free lunch here. Indeed, I'd
suggest that the cost to provide adequate
FCC training to LEOs is greater than if the
FCC were given additional funding for CB
enforcement by the FCC itself. Since there
is NO additional funding to the FCC to
provide LEO training and support, then we
pretty much know the level of competence
to expect from any local effort that targets
illegal CB activities.

> And I seriously doubt that the production of a couple of guidebooks,
> with a system to answer phone calls seeking clarification, would cost as
> much as the salary, and transportation, of the many employees that will
> be needed to enforce CB today (especially with the massive problems that exist).

If you think it will ONLY take a guidebook to "qualify"
the LEO's to the degree needed to enforce the law and
serve as witnesses in court on these prosecutions, then
you haven't been to a court in a long time. Reading
an "FCC Guidebook" on CB" isn't going to qualify anyone.

> Actually, since we're talking about money, local enforcement could
> turn out to be a great bargain for the taxpayer. For example, instead
> of spending money to transport FCC agents around the country to
> investigate complaints, that money could be spent elsewhere (such as on

> better enforcement of "pirate" operations around the CB frequencies).

This law does NOT appear to address NON-CB pirate operations
at all. It may look like CB violations, but I'd bet a good
attorney could blow any CB violation charges out of the water
if the operation didn't actually involve CB channels at all.

Cheers,
Bill K2UNK

Hello TSH:

You should be able to make 10 to 15 miles on AM, on a no skip day. I talk to some of the locals out here in the Mojave Desert on my TS-5010 with only 20 watts or so on SSB, about 20 miles at times.

Transmit range will be figured on the antennas performance based on the antenna and how its installed.

Receive range will be greatly influenced by others stations effective radiated power, and location. Interfering noise generated by the vehicles ignition system, alternator, computer, fuel pump, radiator fan, and a few other wonderful things. That may mask the weak signals. Good radios have a Noise Blanker (NB) and a Automatic Noise Limiter (ANL) that help out a heap reducing some interfering noises.

No reason to ta give ya ah hard time for a simple question.

While I travel I keep an ear on the local trucker channel, the rear view mirror, and my radar detector. And try not to haul ass by myself in the open, so that my car isn't the only one in Smokey's radar gun sights....

Is big Ten-4 ah!

Jay in the Mojave

Charles if you go with the whip on the tool box try to keep it back as far as possible from the cab, I have seen instances where the antenna would not tune when too close to the cab.

hillbilly,

The receiver in the Washington is a dual
conversion front end, just like the majority
of equipment on the market. 1st stage runs
at 10.695 mhz and 2nd stage runs at 455 khz.
His problem is fundamental front end
overload.

kal4cu: Have you thought about buying a beam?
How about relocation?

Hi Richard

Don't know if this helps, but I've got my little Galaxy iii freq
counter manual here and it says:

Power Requirements: 8 - 13.8v dc
Freq range: 1-40mhz
Current: 60mA
Input Impedance: 5K Ohm, 20 pF
Standard Oscillating Freq: 4.5MHz+-10ppm
Input Voltage: 100mV ~ 2Vrms

-Toby

>>>>It's a choice. Pick the lesser of two evils, or flip a coin.<<<<<

There actually is a strategy one can employ. If you think there will be a majority of republicans in House & Senate, then vote for Gore. If you think there will be a majority of democrats in the House & Senate, then vote for Bush. This will cause "gridlock" between the Prez and the Houses, providing us with the best chance of stupid legislation not getting enacted.

My opinion, YMMV

Nick

Doc,

Good question. I was wondering the same thing.
0 - 9 increments are measured in "S Units", one
s unit being equal to 6 db.. Above s - 9 eveything
is incremented in db., but very tightly....in blocks
of plus or minus 10 db. each....how does he do that!

Jack

LOL..yea... I can hear him, just not like I was able to last year. He is quite a pest. Always bitching and cryin' about the AT's. Must be an inferiority complex or something. He does ALWAYS seem to be on. Someone once posted a name and address here that was supposed to be him, in a town outside of Phoenix. A quick search of Maricopa county records revealed the owners of the alleged property and the name posted did not match, but he could be renting, info. given might have been wrong, etc. Bob is a prime example of how much the Feds actually give a squat about cb.

306. Antenna Continuity Puzzle (at least to me:^)

Newsgroup: rec.radio.cb
Date: 2000-10-03 00:00:00 UTC
From: Cowboy <cowboy_krs21208@my-deja.com>
Message-ID: <8rd7qa$5r1$1@nnrp1.deja.com>
Source record: 54169

This might be a stupid question, but hey, that's how we learn.

I have two different mag mount antennas (one a Wilson 1000). If I check the continuity between the center post and the 'nut' (on just the cable and mag mount section) there is no continuity as I would expect. However, with the base loaded antenna screwed in place, the nut and the center post show continuity.

On my dipole the two elements are kept separate and there is no continuity between the center conduit side and the braided shield side.

Why does it seem that these two mag mount antennas are allowing the center conduit and outside of the pl 259 to contact eachother?

307. RCI 2970 - TX Problem - Seems to be RF Feedback

Newsgroup: rec.radio.cb
Date: 2000-10-03 00:00:00 UTC
From: Richard Smith <rsmith@NOSPAMplaneteer.com>
Message-ID: <7opC5.14702$YG5.30305@tor-nn1.netcom.ca>
Source record: 54170

Hello all,

Previously I posted a message regarding TX problems with my RCI-2970. Well, it seems that the problem may well be associated with RF feedback and with my setup in the car. I verified this by running my radio at a friends base location, and the radio performed correctly, with no signs of feedback or even squeal.

When the radio is running in my car and while talking on SSB my, the peaks of my voice seem to trigger a feedback loop and I can see the o/p meter going full tilt even when I am not talking. Anybody listening to me can hear the squeal.

Therefore, does anybody have any ideas of how to isolate where the RF is getting back into the radio, and any suggestions for possible cures ?

Would a pair of those clip on Ferrites on the power leads and/or one on the microphone lead help ?

My +ve power is fed directly from the battery, and the -ve connected to the car chassis locally to the radio. Would it be worth taking the -ve directly to the battery also ?

Is there a way to improve the ground on a K-40 trunk mount antenna ?

Any suggestions are welcome.

Thanks in advance.

Richard.

IARU Monitors Seek Reports on Unlicensed Operation

In an effort to better document the extent of unlicensed operation on Amateur Radio frequencies--particularly 10 meters--the International Amateur Radio Union Region 2 Monitoring System is surveying member societies about the extent of the problem. The ARRL is soliciting reports from US hams .....(snip)

In order to provide statistical backing for ARRL's survey response, Price is soliciting reception reports from amateurs for the two-week period October 1 to October 14. Observations should include date and time in UTC, frequency, mode of the transmission, language (if known), and any notes that might assist in identifying the source. Observations should also be limited to amateur frequencies, focusing on 10 and 12 meters.

Price emphasized that operations on the so-called "freeband" between 10 meters and the 11 meter Citizens' Band are not a topic of this survey. ......

_____
The FCC amended Section 1.80(b) of its Rules to increase the maximum monetary forfeiture penalties .....

_____
FCC upholds forfeiture for illegal amplifier sales: The FCC has denied a petition for Reconsideration and upheld a $7000 fine against The Two Way Shop of Kennewick, Washington. The concern was fined for willful and repeated violation of the Communications Act of 1934 and FCC rules by offering linear amplifiers for sale. ....

> violation of Part 97?

That doesn't because the transfer of ownership was not by sale.

Once the nephew takes possession, then there may be the part 95 PRESUMPTION issue if the amplifier is at the same location as the CB station (for which there's a possibility that presumed use could be refuted due to the way that the item was acquired - but the nephew would have to demonstrate that there was no other evidence of use beyond simple possession).

You may want to check the connection on the ring shield on the mic
connector. You will have to take apart the front of the radio to
get to it. It's the mic plug PCB. Mine has broke twice on a 2950.

Look at this picture:
http://www.wilsonantenna.com/P1000cut.jpg

I believe your power is put in the coil at the middle tap. The bottom one is grounded and the top one goes to the stinger. It is a DC grounded antenna. Is is a 50 ohm load at 27 megahertz, but about zero ohms to DC.

>violation of Part 97?

It is established law that any will provision which is in violation of law is void, therefore Uncle Festus can no more "will" the amp to a non-amateur than he can give or sell it to one.

The administrator of the estate can do any of the following to comply with the equipment limitations:

Give/sell it to an amateur operator or club entitled thereto, with any proceeds of the sale going into the portion of the estate gifted to the non-ham relative.

Export the device.

Destroy the device.

That is a good one too. Now we are down to just the part about
possession/presumption of use and use being illegal.
My point has been that the vast majority of amps have been obtained
illegally (can't be that many hams dropping dead or not renewing <g>) so
the rest was kind of moot in point.

Since the wilson 1000 is a shunt feed type antenna you will see a dead short
with the continuity meter the coil is tapped and goes directly to ground

Hey group!

I was driving along I-40 today near Hickory, NC when a brown sheriff's Ford overtook me. There was no really visible indication of what county it was from, so I thought it was local (Burke or Catawba County), BUT when he passed me, after hanging back a little observing my antennas, I saw that the tag read, "Indiana Sheriff 6806". He slowed somewhat, and I overtook him again. Both of us had our windows down, and I waved at him. The deputy in the passenger seat called over and asked me what all those antennas were for. I have my ham callsign in the back window, but I told him I was a ham anyway. He was friendly enough, but seemed like he would like to "investigate" me, so I hollered back across, "Well, anyway, YOU guys can't touch MY scanner!!" He nodded, but eee-uuuw, I could tell he would like to have hassled me. What in the world an Indiana sheriff's deputy(s) would be doing headed east on I-40 in NC is beyond me. For me, it was a treat to be able to laugh right in their faces! I found it funny as h---. That laughter was for all the innocent people that have been illegally hassled by "rambo" cops. Most people I have met in Indiana are really friendly--my ex-wife was born there--and I think Indiana is a nice state. My experiences there have been good, and I had no trouble with the law in spite of the multiple antennas. But with the guy in Indiana getting arrested for having a scanner (things must've changed since I was there), this was a chance to be a smart aleck (in a friendly way) where they couldn't do anything about it. IF they pass that local enforcement law, it will only get worse.

73 All,

Jerry

Cowboy,
On the 'shorted' antenna;
There is a coil in the base of the antenna. The whip is
connected to the top of the coil, and the bottom of the coil
is connected to ground (braid). The center conductor of the
coax is connected to a turn on the coil. This provides the
impedance matching needed to obtain the 50 ohms input your
radio wants to see.

O.K.That means there was an illegal sale because a licensed amateur can only sell to another licensed
amateur or to a dealer who is also bound by that restriction.

Yes. The licensed amateur is allowed to build 1. The non licensed individual isn't allowed to build
or modify any.

>
>
> Note that this does not limit the [re-]sale of the used amplifiers to one per
> year. It only limits their construction.

But the sale is limited to licensed amateurs or dealers. The only way I can see that a non licensed
individual could legally obtain an amp would be if he got it while he held a license and then never
renewed.

First of all, I did not say this! :

> > What a crock, the government has as much right to reside over the radio
> > spectrum as it does reside over the light spectrum.... Am I wrong?

You edited my message to say this. The first part was just an exaggeration to illustrate the similarities in the two spectrums, that being electromagnetic energy, are property of the public. If you are going quote someone, don't deliberately take them out of context.

Then I simply stated, that I thought the government is getting in our lives too much.

That's it!

Of course we need rules, but the method of enforcement seems to me, a little too
aggressive. Search and siezure sends a chill down my spine. Where does it end? What's next?
Maybe I was being too vague on what I meant.

> for free or there is a linear fairy)

Not necessarily. The FCC had a long inquiry period before making this rule official; a period when interest in CB was at a peak. When it became obvious that 10/11 meter amps would be banned manufacturing went into high gear and literally 10s of 1000s of amps were made before the rule went into effect. Contrary to popular opinion, most of these were well made and are still around. I still have two of them. Thus the government would have to prove more recent manufacture to successfully prosecute someone for mere possession and that could prove difficult.

Don't get me wrong, I emphatically do not condone or encourage illegal operations, but rather encourage everyone who may be operating illegally to "get licensed and get legal". If you enjoy CB-DX then you will enjoy 10-meter DX at least as much; you can buy a 50-watt xcvr from Radio Shack for the same price as an SSB CB; you can even run it's QRP (low power) signal into your 100+ watt amp if you want - all legally if you'll just spend a few hours getting a license.

I didn't change it; I included a portion of it so that others would
understand the contect of my reply and lopped off the rest to save
bandwidth ... as I have here. If what your wrote didn't say what you
meant then I apologize for responding to the former instead of the
latter.

> legally obtain an amp would be if he got it while he held a
> license and then never renewed.

How about this:

Uncle Festus was a licensed ham and he died last week leaving
ALL his wordly posessions to his nephew who just happend
to be a CBer. Included in Uncle Festus's possessions was
at least one multiband HF amp that can operate on 11m.

Please describe how any of this scenario constitues any
violation of Part 97?

Cheers,
Bill K2UNK

You may remember that on July 2, 1947, witnesses claim a
spaceship with four aliens aboard crashed on a sheep and
cattle ranch outside Roswell, New Mexico.

This is an incident, of course, that many say has been
covered up by the government.

However, you may not know that on March 31, 1948, exactly
nine months after that day, Al Gore was born.

Now, that clears up a lot of things.

I was trying to talk on channel 37 LSB last night and someone on channel 40 was using so much power that they overlaying this channel. Is there a filter/fix that I can install to stop/reduce this problem. The person on 40 was less than a mile away from me.. I am using a Uniden Washington base with a R/S A99 antenna. I am open for suggestions. My antenna is appx 35 feet in the air.

a tune up does not automatically mean a hack job. maybe in your areas thats what all the techs are doing but not here. a good tech will tune it for best sound and not a splattering, limiter clipped, finals changed type job like the guys who run out a buy a secret cb book will do. there is a big difference between a real tech and a guy trying to be one.

From: Big Dog 326 <scott_326@my-deja.com>
Message-ID: <8rb82j$j5b$1@nnrp1.deja.com>
Source record: 54205

I have purchased and am using an Anttron 1700 mobile antenna! The design is 2' of wire wound fiberglass (thus base loaded, kinda) With a 4' steel whip on top. I have gained in both transmit and receive against a Wilson 5000 and a Wilson silver load (fiberglass) of equal length. Can any antenna Guru tell me why this design is showing improvement over the others? Rec. is 1-1.5 db better and transmit is showing a .5-1 db gain over the others (as measured using an S meter). Tests done in a controlled manner with known stations and stationary. All other factors like grounding and location on vehicle are the same.

One other factor in the Anttron design I did not include: The 2' wire wound fiberglass section does have a loading coil at the top, prior to the 4' steel whip. I do not think that it is only a base load vs. center load vs. top load issue in that the Wilson silver load is a top load and should in theory perform best.

Three couples, one elderly, one middle-aged and one young, just newlyweds, wanted to join a church. The priest said, "We have special requirements for new congregates. You must abstain from having sex for two weeks so we can judge your discipline." The couples agreed and came back at the end of two weeks.
The priest went to the elderly couple and asked, "Were you able to abstain from sex for the two weeks?" The old man replied, "No problem at all, father." "Congratulations! Welcome to the church!". The priest went to the middle-aged couple and asked, "Well, were you able to abstain from sex for the two weeks?" The man replied, "The first week was not too bad. The second week I had to sleep on the couch for a couple of nights but, yes, we made it."
"Congratulations! Welcome to the church!" said the priest. The priest then went to the newlywed couple and asked, "Well, were you able to abstain from sex for two weeks?" "No father, we were not able to go without sex for two weeks" the young man replied sadly. "What Happened?" inquired the priest. "Well, we made it through the first week. But then my wife was reaching for a can of paint on the top shelf and dropped it. When she bent over to pick it up, I was overcome with desire and took her right there." "You understand, of course, this means you will not be welcome to join our church at this time," stated the priest. "We know." said the young man, "We're not welcome at Home Depot at this time either."

beaker,

Don't be too sure. In the early afternoon and on into
the evening after the stateside traffic dies out on the west
coast, stations in australia, new zealand and hawaii can be
heard and worked rather easily out of the west/northwest.
The longpath direction into australia from the states is
the predominant path when the sun is in between the west
coast and down under. The shortpath is the predominant
path in the early am on the east coast when the sun is
coming out of the far east. Signals for the most part
are strongest along the path in which both stations
are "illuminated" by the sun at both ends of the path.

Southeast would be the "shortpath"....
Northwest would be the "longpath"

It's called skywave propagation.

Not if it's limited to ONE per year, which is first used in the constructing amateur's station..... He (or she) is allowed to sell USED equipment, and is allowed to build ONE 10m amplifier per year. Read the EXCEPTIONS to the type acceptance requirement.....

Note that this does not limit the [re-]sale of the used amplifiers to one per year. It only limits their construction.

>Anyway, incidential radiators *are* theoretically the FCC's problem.
>It's just that they don't assign them a very high priority.

Yes, they assign a priority based on how much money they would
make from fines, and so forth. A single "count" against a cable
operator probably isnt worth a whole hell of a lot, but if they
can prove that someone sold a million uncertified TVs they stand
to make a killing in "profit" from the fines.

Remember, the FCC is 99% Lawyers and Beancounters, and 1% engineering,
so thus they care mostly about what their revenue stream is, and
little of the spectrum users.

To:

Anyone who wants to improve receiver performance
in the following radios:

Cobra 148gtl/nw/st/....
Uniden Grant XL
Uniden Grant LT
President HR-2510
Ranger 2950/2970
Texas Ranger TR-296

Just to name a few....

I have developed a kit which will enable you
to enjoy one of the benefits of more expensive amateur
stuff, that being the ability to shift the if passband
of the receiver front end. This would be comparable to
the "IF Shift" function in most of your upline hf
equipment. I have installed several of the prototypes
with more than gratifying results. All radios listed
above will shift on SSB while some others will
shift in both SSB and AM modes, I have installed this
in my own HR-2510 as well, and was quite satisfied with
the results, especially on AM. SSB has never been so
"manageable", not to mention the lower noise levels.

If any of you reading this would be interested
in a kit such as this, please email me @:

fire228@cybertrails.com

Or chat with me on my web site @:

I have NEVER seen any part 15 warning on amateur equipment (new or used), nor should there be one since such devices are manufactured for power levels in excess of what part 15 permits (because they're subject to another part - part 97).

If you're not joking, then someone has played a joke on you. For that matter, I'll sell you a can of squelch after the normal amount your radio needs has all leaked out. ;-)

klajr2,
Basically, the answer to all your questions is, yes. A ground isn't only for RF purposes. It's also for electrical safety. In the days of solid state, you don't see the high voltages you do with tube type technology, but the principle is the same. Rather have 'it' go through a ground wire than through me!
'Doc
PS - Think ~big~ when you think about grounding and ground wires.

your best bet would be to contact the antenna manufacturer directly (they do have
an engineering dept..).

I recently contacted them about constructing a base version of their
CB base antenna (the antron-99) for 2 meter ham... I was send back
a hand-drawn schematic of the base loading system

So far, the antenna performs nicely around the entire 2 meter bad and outperforms
most of the commercially available 1/4 wave antennas for that band. It still won't
outperform a commercially available "high-gain" antenna array, but for small dwelling
and apartment use, what I have built works nicely.

As for your question, you may be using a more efficient design than the wilson
brand antenna (which uses a tapped transformer design).

Gee Jack?
is that a "calibrated" s-meter (very unlikely).

all an s-meter does is show RELATIVE signal strength.
unless you have one calibrated using a known signal source
and load, what any average cb'er has is nothing more than
an indication that the signal is there... too many radios use
slightly different circuits to measure signal strength. Thus,
its like like comparing apples to oranges.

For the record, I happen to know your reputation by actual
experiences (havng talked to many of your "victims".
I personally would not trust your technical opinion (have you a
degree in electronics engineering or a commercial class
radio/telephone FCC license <that ham ticket of yours does
not count>).

Meanwhile, back to the discussion at hand.

Doc,

I understand now (. . . sort of) what you're describing. I've seen a similar approach on a homebrew groundplane design that uses a 6' single turn of copper attached from the ground radial anchor to the vertical. The center conductor could be moved up or down on that copper coil until the optimal SWR was attained.

I'm still somewhat confused though, in this kind of a setup, as to what allows the center conductor and braid to ultimately have contact with one another without being considered a dead short that would damage the radio.

Is there a good introductory level electronics book that you would recommend?

Thanks,
Cowboy

AC current works different than DC current .... your CB signal is AC about 27 million cycles per second.... your ohm meter works on DC current, hence the battery....

what is a dead short to DC can be an open circuit for AC.

Hello Jerry & Doc: The old Penetrator 500 and my Mastodon 5000 5/8 wavelength antennas, have a external impedance matching device, made from aluminum tubing and solid rod. These offer a almost perfect match on 147.0 MHz plus or minus a few KHz. The 2 meter energy is radiated from these tuning rods as a folded ground plane antenna, but I don't believe the energy is coupled to the main vertical element. The antennas performance on 2 meters isn't the greatest, but works a hole better than a no outside antenna.

I would think the old Avaiti Sigma 5/8 or 2 would work that way to.

There are no simple answers to this problem, since the causes are many. You say that the other op is less than a mile away. If so, then a stock legal radio can put out enough RF to overload your receiver front end. If your receiver sensitivity drops down (people's signals drop) when the other guy keys up, then you have a densense condition caused by front end overload. There are no filters that can cure this problem since a filter would have to be very narrow (10 Khz), and before the RF front end to eliminate the problem.

If the bleedover sounds like scratchy audio and basically "washes" over your channel, chances are it's splatter caused by the other guy's radio overmodulating. There is nothing that you can do on your end to eliminate this, since the "splatter" is actually on your channel, as his signal has become wider. You could possibly lower his signal level (And consequently the splatter level) through the use of a directional antenna. This would also have some effect on the 1st case above as well. The downside is that you are now forced to have to point the beam away from the interference, which might not be where you want to talk.

There are a few companies out there that advertise "super rejection" filters to install inside the radio. These filters only work to narrow the receiver's channel bandwidth. They are effective in reducing adjacent channel bleedover, that is not of an "overload" nature. They will not help splatter that much, since the splatter is spilling over on to the desired channel anyway. They will not help front end overload, since the filter is installed in the IF stage, well downstream from the RF front end.

Since the "in" thing for most CB op's is to try to make their radio perform the best, many will peak and clip their radios, thereby making their signals stronger, and "louder". That also increases the splatter. You could try a little diplomacy, and reason to try to get this guy to "back it down" a little so that you can hear. In my experience, this usually dosn't last. As soon as one of his friends remarks that he sounds like a "mud duck" or such, he'll be back on the mike gain again,

and your problem will resume.

Many people have come to blows over bleedover issues. Most people believe that your bleedover is "not their problem", and will make comments that you should "buy a better radio". Other people try to solve their bleedover problem by fighting fire with fire. Give the other guy a taste of his own medicine. It's funny how their attitude changes when the shoe is on the other foot. But by this time, you can expect that the problem will escalate. You might have to accept the reality that you might have to find a channel that is farther away from your neighbor, or try to operate when he's not on (sometimes very difficult).

Welcome to CB. It's not for the faint of heart.....

Dave

These parts are becomming more difficult to come by. If you don't find one, with a little patience, you can chip away and drill out the broken slug and replace it. I've done this countless times. I've also been successful at removing the epoxy potting, from the bottom of the VCO PC board, in order to add another varactor diode across the existing one, for a broader VCO coverage. All it takes are steady hands and a little patience.

There was a guy in my area that actually added a VCO modulator to make
FM, and coupled the L.O. output of his scanner to an antenna, and made a
low power transmitter out of it. He was fine until he started messing
around on the local police repeater, and then the FCC popped him.

> And I have seen super regens that leaged mW to the antenna. Would wipe out

Ah yes, super regen walkie talkies. I always knew when one of them was
sneaking around my house. The noise level would jump up proportionally
as they got closer.

> one.

While first phrase is true, I don't know of any law that prevents me, a licensed amateur, from giving anyone my equipment, including RF amp.s, in hope that (s)he will get a license and use them; nor of the recipient having them per se. 47CFR97.315, may be viewed at

<http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=97&SECTION=315&YEAR=1999&TYPE=TEXT>
and 47CFR2.815 at
<http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi>
I can find nothing in either rule prohibiting possession of an amplifier let alone transfer by gift or will. If some other portion of the rules does so please provide it. TIA.

47CFR2.815 says: "... After April 27, 1978, no person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency power amplifier or amplifier kit capable of operation on any frequency or frequencies between 24 and 35 MHz." It would seem legal under 47CFR2.815 for anyone, licensed or not, to import such an amplifier for any use except sale or lease, altho use is farther limited under orher rules.

I would also draw attention to the following from CFR97: "(b)Any external RF power amplifier or ...kit, manufactured, imported or modified for use in a station or attached at any station must be certificated... This requirement does not apply if one or more of the following conditions are met: ....
(2) ... or the amplifier was purchased before April 28, 1978, by an amateur operator for use at that amateur operator's station.

Coming back to the original subject, no matter who's right, the disagreements and misunderstandings, posted here, illustrate the reason why local cops who are even more ignorant of FCC reg.s than the folks posting these opinions should NOT be called upon to enforce them.

398. CB Gear for Sale - Update 10/4/00

Newsgroup: rec.radio.cb
Date: 2000-10-04 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <8rfbqarsu1@slb3.atl.mindspring.net>
Source record: 54312

Time to make some room for more new toys and old gear..... PICs available via Email..

BASE RADIOS:

2..... Browning MKIII AM/SSB Receiver and AM transmitter with G-Stand D104 $250.00 Plus shipping In working condition, sounds good on transmit and receive, Some crystals out of tolerance on Transmitter. (I have used Radio Shack single-channel crystals with good results in the past; most rigs of this age have some.out of tolerance crystals due to aging). Some documentation included

3..... Browning MKIII AM/SSB Receiver and AM/SSB Transmitter w/banana Mic $250.00 plus shipping Rig is barely working, but repairable. Have extra AM/SSB RX and AM/SSB TX chassis for parts units to go with this pair. Banana mic is complete with original cord and plug (incorrect setscrews on plug), no stand and mic not working (possible bad element). Some documentation included

4..... Two Cherokee CBS-1000 one original box and no mics $150.00 plus shipping for pair inop/repairable - I have seen both of these rigs talk at various times. Each time further repair was attempted, much further repair was needed. They have lost their charm..... .PDF File included with service information (WIll trade both for good AH-100 Handheld with accessories)

6..... Cherokee CBS-500 w/Aires (Sadelta) Power Hand Mic with Echo $140.00 plus shipping 110 VAC or 12 VDC. Has old, non epoxy-shrouded firmware with exposed and functional option jumper header strip. Variable power has been added and modulation limiter circuit not modified. External control for dead key of 0 to 4 watts, now set at 2 watts. Very respectable audio quality with hand Mic and a real performer with a power mic. Has 4 memory presets, Dual Watch, NB, ANL, Auto Scan, Memory Scan, Instant channel 9/19, RF Gain, Headphone Jack, External Speaker Jack, 12VDC power jack and Front facing speaker for limited space installations. This unit has a 20 turn pot mounted in one of the case screw holes (left front) for variable talkback that allows precise setting without feedback for any operating combination. I can provide the option of switchable vari-power if buyer desires, as rig has 2 mounting positions for mini-toggle switches on right front side of cabinet that are not occupied. Very solid performer, and with the old Display board treatment no longer available in newer models. .PDF file of service info included also documentation of vari-power addition

7..... Johnson 250 50th Anniversary / mic $50.00 plus shipping In working condition with stock hand mic.

8..... Lafayette Comstat 25B $45.00 Plus shipping Working but not collector quality. Good for parts unit to restore another rig

10.... Robyn T-123B $50.00 plus shipping Working, no apparent mods. Good for adding to the collection, but has signs of wear on front and paint chips on cabinet where bracket was mounted. Do not have tilt mount base stand that was an original accessory for this radio. A nice one, but not a great one.

11.... Two (2) Tram D201 $200.00 plus shipping for the pair One complete (minus relay) and I have had it working to some degree in the past but would consider it to be inop for the purpose of this description. Second rig missing receive VFO and SSB indicator lamp, Audio and final tubes. Were purchased represented as complete and repairable... I will list them as almost enough to make one good working unit. Complete unit has Silver ID Tag with Yellow Diamond containing the "T" of Tram. Other unit has Black ID Plate with Tram in Silver and D201 in orange. Use for parts, repair or restore..... Note: It has been determined that neither are "Rats Nest" versions of the D201. Thanks for all who provided info. Pics available via email.

MOBILE RADIOS:

13..... Two (2) Palomar Digicom 100 $150.00 plus shipping for pair These are Mobile rigs with dual channel selectors, made for Palomar by CPI. AM/SSB. Have service info with interesting possibilities. Rigs are complete - No parts robbed.. Considered to be usable for parts or repair. No mics included, Will include SAMs Photofact (not copy).

14..... Two (2) Midland 13-857 w/ stock hand mics $40.00 plus shipping for pair. Were working when packed away. Crystal rigs, not the later "B" model with PLL02A. Usable for parts or repair; may still work, but 23 channel and not to be sold for on-air use.

MICROPHONES and ACCESSORIES:

Demco Modulator $50.00 plus shipping Working.... 4 pin and 5 pin Mic jacks have been added to front panel, along with a 3 position/center off toggle switch to allow selecting original, large 4 pin mic jack or either of the 2 newer style mic jacks. Add some
Audio to your vintage tube rig.

Pics available via email.

> "virtually" no enforcement, not that there was absolutely no enforcement
> at all.

And the simple fact is that it will COST more
to train LEO's than to maintain an appropriate
in house (FCC inhouse) enforcement effort.
Do you think the LEO's will just pay the
FCC to get trained? Will the LEO's
send cops to Washington to get trained or
will they expect the FCC to show up locally.
It all costs $$$$ and this bill has ZERO
funding attached to it.

> I simply don't accept your notion that there will be that much additional
> costs involved, so there is little reason to answer your question about
> where additional money will come from.

Then you have no concept or understanding of
the true costs in both developing appropriate
and complete technical training materials and
in the actual training session costs themselves.

> > If you think it will ONLY take a guidebook to "qualify"
> > the LEO's to the degree needed to enforce the law and
> > serve as witnesses in court on these prosecutions, then
> > you haven't been to a court in a long time. Reading

>
> Other than perhaps police procedure, an arresting officer is never
> called to be an expert witness on any subject matter before a court of
> law.

Have you even been inside a court. In NJ the officer
must demonstrate to the court that s/he is certified
to operate and testify as to speed readings when done
with a radar gun. That involves a MINIMUM weeks

training. The cop is not a robot under some magical
direction. The cop has to be knowledgeable about
what he/she is doing.

> The arresting officer simply makes the arrest, and testifies on
> events during that arrest. Assuming the person wants to challenge the
> arrest (plead not guilty), it is up to the court, after hearing all
> sides (including expert witness evidence), to decide the fate of the individual.

ROTFLMAO!

Question one to the cop by the defense attorney:

Why did you arrest my client?

Other questions would follow:

What is your training as to the law regarding
CB operation?

How did you identify my client as being in violation
of anything?

Get the picture?

> An arresting officer does not have to know how a vehicle is designed
> to write a ticket for speeding.

Wrong analogy. The speeding ticket doesn't
come from driving an illegal vehicle. For the cop
to make a valid arrest he had better be able to PROVE
a violation happened AND, before that, he had better
have had probable cause to pursue his investigation.
The complaint of a neighbor experiencing TV
interference does NOT pinpoint any cause. The
LEO would then have to somehow identify the source
of the interference before he'd even get a search
warrant from a court.

> Likewise, he does not have to know that
> much about the technical aspects of radio to write a summons for
> violations of the radio regulations. The only knowledge really needed,
> in either case, is that required to know that a violation has probably
> occured. As stated above, the court will then decide if that person is
> actually guilty.

You really scare me. You want police arresting people
because they believe someone probably did it.
Sorry, that may lead to investigation and even a search
warrant, but no Dist. Attorney is going to take a
case to court UNLESS the DA believe he has more than
"probably" to bank the conviction on. To get that
conviction, the defense will drill the LEO on every
aspect they can regarding the technical qualifications

to pursue these alleged rule infractions and on how
the defendent was identified to begin with.

Using the radar speed enforcement again, in NJ, the
cop must show that the radar gun was calibrated
before the use and again after that use and that in
BOTH calibration tests the unit was operating according
to manufacturers specs. If either calibration test
failed, then the radar reading is deemed suspect
and it gets thrown out.

Cheers,
Bill K2UNK

>>Is there a way to improve the ground on a K-40 trunk mount antenna ?<<

> i don't know about the feedback problem , but getting a better antenna
> wouldn't hurt .

To be honest, I have found the K-40 to be a good antenna (for my set-up). From here in Canada, I can talk to southern USA, Mexico, Europe etc. no problem with less that 100 watts. How much further do I need to go ? Also, because I have a sloping trunk, the K-40 allows me to adjust the angle of the mount to compensate so that I can keep the antenna vertical. I do not think the Wilson will do that.

Richard.

Just a quick message to let you guys know that I have isolated the problem, and have implemented a temporary fix.

I picked up a couple of those clip on ferrites from Radio Shack on the way home. They had no effect on the power leads, but after installing them on the microphone lead, all problems seem to have gone away. I can now wind up the mike gain to a suitable level and increase the output power without any distortion or squeal being present.

I am still going to investigate why this radio is susceptible to RF feedback as I know the clip on ferrites are just masking the problem. Scott's suggestion sounds to be a good place to start, as the RF is getting back in through the mike. Maybe the shield connector has come loose like he said.

If anybody has any other suggestions, please let me know.

Richard.

Jay,

It's been many years, I saw an article in a ham publication about converting an Antenna Specialist base-load CB antenna to 2 meters. I don't remember now how it was done, but I remember trying it. Like Doc, I trashed the coil trying to get the gray cover off! I gave up on that project. LOL!

Cowboy,

The only way I know to explain this is that ground as pertains to RF doesn't always correspond to DC ground. RF doesn't see "ground" the same way DC does--for the most part. When you have a coil, a resistor, or some other device that alters the relationship of an RF signal, you will get varying values of "resistance" to the circuit. When you measure "ground" with a voltmeter which (I think) translates what it "sees" into either DC or AC, it cannot distinquish an RF ground between an AC or DC ground, so it either reads a value of resistance or, in the case of an antenna coil (it can't measure inductance--at least I never have), it reads continuity between both points of measure (the two leads) and shows dead "short". I hope I haven't muddied the water. Doc---HELP! LOL!

Jerry

I have that artical filed somewhere....converted a couple of them and
they work good... I used the Antler Brand base loaded antenna. the
cover came off easy...

Barry,

Oh, yeah, I did. Indiana sheriff car in NC. Indiana cops pop ham for having LEGAL scanner. Indiana deputies follow NC car observing "suspicious" antennas. Pull alongside giving evil eye. Good ole NC boy waves (southern hospitality) Cop WAY out of jurisdiction asks what they are for. Gets truthful answer. And a smiling waving, "But you guys can't touch my scanner!". Not only that, I don't even HAVE a scanner in my car (and they are legal in NC!). They didn't bother me because they couldn't. I didn't DO anything wrong. Period.

Jerry

a couple of ferret beads on the audio wire might be the
fix....sometimes a 1 K ohm resistor in the audio line with a .01 cap to
ground is needed.... even better to use 2 .01 caps.. one each side of
the 1 K....
Grounding is one of the most important thing that can help a
radio....you say you have a trunk mount... think about that. what
kind of path does that have to ground. 2 greesed hinges and a
latch. .... not very good when it comes to RF energy.

Bill, in the comments on the Bill in question, the Budget Impact was calculated to be less than $200,000 and the savings on manpower by the FCC on enforcement would cover this amount? I am skeptical but when the locals smell the FINE money that the FCC
mandates to be collected who could blame them for acting like sharks at feeding frenzy.
Since locals can only enforce the Regs and not make new laws, then what about the fines?

What makes you think they will get trained? The curricula for a typical degree in LE it sorely lacking in law courses, so few cops know the laws they enforce. My state only requires vehicles to have headlights on after dark and in inclement weather and the very same law applies to motorcycles as cars; but I have been stopped 4 times in clear broad daylight by LEOs who thot that bikes had to to run their headlights continuously. A LEO threatened to ticket a friend for reckless driving because he took one hand off the bars to signal a turn ... as state law required! And when LAPD located the "Symbionese Liberation Army" (all 3 of them) they shot their house up so badly it literally collapsed!! I'd just as soon not have folks like that responding to some neighbor's complaint about TVI, real or imagined, especially when the alternative is a few illegal amplifiers.

Well, a co-worker of mine has a simple CB in her car. I don't know what the setup is, but the antenna is about 4 feet high in the center of the roof. On her way to work (at 5 am in the morning), she can talk nearly all the way to work (20 miles) to her husband. When the skip is in, she can't raise her husband in his truck from her base 3 miles away (the base has no linear, the truck does - she can hear the truck but he can't hear her). So the long and short of it is that you can expect a low of perhaps 3 miles when the channels are jammed up to 20 miles or so if it is clear. I doubt there will be a huge difference between AM only rigs - if you went to SSB you would get more range, but not all folks are equipped for SSB. Next best bet is to look into a good antenna (that CAN and WILL make a difference). Best of luck!

That is a darn good question. Back in the '60s, there was an FCC
monitoring facility near here in Canadagua, NY. I doubt there are many
monitoring facilities left. Issuing of commercial (and amateur)
licenses has been turned over to private groups. Unfortunately, it
would seem the government is much more interested in building baseball
stadiums, football stadiums, handing out fat tax breaks so business can
ship manufacturing jobs overseas etc. Heck, Kodak recently abandoned
the Elmgrove plant (after telling the Gates government they were
staying in the Elmgrove facility). After receiving millions in
property tax breaks for years to keep them there, they are receiving
hundreds of thousands of dollars to 'consolidate operations'. They get
millions in breaks for shipping cameras back and forth to manufacturing
plants overseas. The new owners of the Elmgrove plant are getting
millions in tax breaks, millions of dismissed taxes on construction.
There just isn't that much for social needs like social security,
health, or the FCC. Oh well ... better buy a season pass to the Rhinos
(next on the list for a stadium).

This thread reminded me of a schoolmarm I once knew. Now I came up in beautiful downtown Compton, Ca., just south of Watts, and was surprised to learn that most kids finished school without seeing anybody killed or maimed.

Anyway, my best friend's folks had come from Italy and he refered to himself as a "guinea". Years later I was telling another friend about my "guinea buddy" as his girl was getting into the car. She was extermely offended, explaining that she was Portuguese and was sometimes called "guinea", but was mollified by my explaination. A few blocks later this poor PC schoolteacher looked around and then announced "This used to be a nice neighborhood til all the Spicks moved in ....."

I agree. The reality is that they won't. The few LEOs
that embark on a CB enforcement (probably at the prodding
of area residents and local legislators or the local
mayor) will NOT (IMHO) be satisfactorily trained.

<SNIP> of motorcycle anaology...which was good one. If they
can't get it straight regarding headlights, who believes
they could come close on radio regs.

$200,000 doesn't pay for ONE FCC enforcement person if you
work up the fully loaded costs. Is ONE FCC person going
to be able to advise all those LEOs? I don't think so.

> I am skeptical but when the
> locals smell the FINE money that the FCC

That's an interesting point. Just WHO would get any
federally mandated fines. Does the law call for any
fines to be retained by the local entity...and even if
it does, that does NOT mean the local police force get to
keep that money at all.

> Since locals can only enforce the Regs and not make new laws, then what

Considering that there appear to even be some amateur licenseholders who don't properly understand the rules regarding 10m amplifiers, just how do you expect the LEO's to understand them?

Maybe only LEO's who PERSONALLY hold at least one FCC radio license (any service) should be the only ones who qualify for enforcement authority. At least then, we would get LEO's who understand radio.....

Bill,
As to the 200,000 dollars per year estimate, I think it might be
lowballed but then the FCC might have an ulterior motive in giving
CB to the Locals since each office catches flak sooner or later due to

some crank case with a linear, a splatter box and a bad attitude which the FCC doen't wish to deal with. I suspect the technical nd from the FCC to the LEOs will be a training film, a handbook and an answerline to some unknown beaurucrat in Washington, DC staffed only on days not ending in Y?

Who gets the fines is a very good question, I live 3 miles north of LOUISIANA's most famous SPEED TRAP, Golden Meadow, Louisiana and those LEOs who are savey about radio are wondering this too! In Louisiana, a city, town or village may only get 25% of its operating budget from fines of a traffic nature, so HB 2346 is being watched very closely. Also this is the Home Parish (County) of Mr. Billy Tauzin who recommended a pass on this bill, so now you know the rest of the story as Paul Harvey would say!

Now now ...I wouldn't say that.
Don't give up on Ham Radio just because of the present licensing
format....and the present leadership. Ham Radio may still become an
educational technical hobby in the future as it was in the past.

Hams need more license classes and/or technical endorsements.

Bob Wex w2ilp (Increase License Potential)

Today you can go to a gas station and find
the cash regisdter open and the toilets
locked. They must think that toilet
paper is worth more than money.
--Joey Bishop--

Enuf of this toilet humor. Renew your Ham
license and as for toilet paper...flushit!

HB,

Curious. Have you ever tried to get the cover off a %$#@&^+#durned
Antenna Specialists. GRRRRRR! LOL!

BTW, if you are in Arkansas, here's another native! I was born in Der-
mott, Ark. I mostly remember Dardanelle where I lived until I was 6.

TW,

But what "infraction" would they enforce? I wasn't speeding, I wasn't weaving, I was friendly, smiling, and waving all the while. I don't think NC would be very supportive of Indiana cops down here "enforcing" (read- hassling) non-existent "infractions" here. Just because cops in Indiana are paranoid about radios and antennas doesn't mean they can come down here and enforce THEIR laws. There are no scanner laws in NC that I am aware of. For the most part, you'll find North and South Carolinians quite unwilling to give up that much freedom. You CAN get in dutch IF you commit a crime and use a radio in the course of the act, or to elude capture. Just having a scanner in your car in NC? NO! And, DadBurn it, them thar Hoosiers cain't be a-comin' down hyar and a-hasslin' us Tar Heels"! LOL!

Besides, as to my comments to them, we all have our "moments"! LOL! The look on their faces was worth it!

The only "CB" operation whose violation is handled under
Part 95 is when the operator's frequency, power, and equipment
are in compliance with Part 95.

The FCC considers operating overpower, "out of band", or
non-type-accepoted equipment in "CB" operation as UNLICENSED
operation in violation of Section 301 of the Comm Act rather
than a "rule" violation of Part 95 by a NON-LICENSED operator.
Note the difference in wording.

This Bill will give the locals authority in those circumstances
but no doubt they will, even with "training", handle it
differently from the way the FCC would handle it . <shudder>

What about speech processors? How they work, why they work, what they do? Speech processors are used in the recording industry, the broadcast industry, and probably any other industry that uses electronics to transfer audio data. There shouldn't be any wives tales about them, and word of mouth you should know how that get's twisted around. Any and all information about electronics can be found in your local library. Don't blame two people you talked to for yourself being misinformed. And another thing he can't be much of a "tech" if he talks about wive's tales. Real techs can put the laws and theorys on paper to see, and talk in laymans' terms.

I have a buddy who has a cobra 75 one of those small mobile 12v handheld jobs. Recently he took it in to the shop and had it tuned. Ive never noticed any notes anywhere on any adjustments on this radio and started to wonder if he was robbed. This unit is so compact, it seems like a handheld with little or no adjustment or modification available. Has anyone got any info on the 75 for adjustments or mods or did my buddy lose $50 for nothing??

> onto their consumer appliances. Thus, this Bill!

And it's a ridiculously stupid bill, giving local law enforcement jurisdiction over CB radio. It's nothing more than making the local police do the FCC's job for them. I work in law enforcement, and I don't want to see this bill pass. We have enough to do already without worrying about people complaining about their neighbor's CB. Very few police officers have any clue as to what CB rules & regs are, so if this bill is passed then every officer from coast to coast will need to be trained. Nor do most officers know what the difference between CB and amateur radio is.

Most complaints will be caused by poorly shielded consumer gear anyway, whether or not the CB operator is running a totally legal station. In these cases, will the CB operator be cited or fined? It takes an expert to determine what the cause of the interference is, and most officers don't have that expertise.

Let the officers deal with drugs, violence, and crime. Leave the interference complaints to the FCC.

Well I run a Wilson 1000 on the trunk of my car & I still have the sequel that you are talking about on sideband with my RCI 2970. So I don't think that will change anything. Never ran the 5000 though! My match is a 1.2:1. I stopped the sequel the same way. I run a Tuner RK56 with a D104 type mic cord on it. At the plug I installed the R.S. filter & that stopped the problem. Never had the problem on AM, just sideband.

464. X-force XT-400 Amp !!!

Newsgroup: rec.radio.cb
Date: 2000-10-04 00:00:00 UTC
From: "Michael J.Talkington" <kc8fwd@iolinc.net>
Message-ID: <39DBE6B9.9359A8B0@iolinc.net>
Source record: 54378

Hello,
A while back I stated I got a amp and it was a X-Force XT-400.Well here are the results of my tests.On am on a bird 43 with the peak kit installed it keyed 150 and swang to 550 watts.On ssb
it peaked out at about 950.That is with a stock RCI-2950 EX.With the only mod done to it was the low power was reduced to 2 watts by me using a ameritron oil can dummy load and my bird meter.
Also I used a stock mic and keyed 2 watts am into it using my VALOR BIG BUBBA antenna.I know that I need a better antenna and as soon as I get some more cash I will have a "55" antenna.
I am running 4 gauge rockford frosgate power wire from the battery to a inline fuse less than 4 inches from the battery.then from the inline fuse to a lightning audio 1 farad capacitor then from the cap to my amps positive wire.I drilled two holes about 6 inches from my amp and added two 3/8 ths bolts lock washers to the holes.I then run a ground wire that is about one foot long to the negative side of the cap then to one of the bolts I added.The other bolt had a 6 inch wire to the negative side of my amp.All ground wires are rockford frosgate 4 gauge.I got the power wire,inline fuse holder,capacitor,and connectors from my local car stereo dealer.I know this is going to cause some
arguments but Oh well.73's de Mike

Thanks David from Express electronics for answering all my dimb questions.

Provide some more information Lloyd. Does the TX light go on? Does the Rx noise stop when you key the radio? Does the meter register a carrier in AM mode? Keep in mind that on USB or LSB you must be talking to provide output power. The 451 is a good radio - difficult to modify for extra channels, but a good radio.

Cowboy, Doc answered it best. All I will add is that both shunted and non-shunted antennas are perfectly fine. The shunted units have the advantage that they may be tuned to provide, as Doc suggested, exactly 50 Ohms. If the antenna were not shunted it would be providing approximately 37 Ohms. If it is a mag mount the added ground resistance would bring that pretty close to 50 Ohms. You can also vary the length of the coax slightly to improve the VSWR as seen at the radio. However, even at 37 Ohms you are looking at a VSWR of 1:1.3, which is perfectly fine. Some argue that a shunted antenna will reduce the amount of static buildup on the antenna. I say this is bullshit given that there is typically a resistor to ground attached to the center conductor just inside the radio anyway. My favorite? I like the non-shunted because you typically can engineer them for much wider bandwidth. You can also determine if you have coaxial line problems much more easily - and I often do! :)

MC

Different antennas have different radiation patterns. Okay, that was a blinding flash of the obvious. Put it this way, a bottom loaded, center loaded and top loaded antenna all of the same length will have slightly different patterns which may appear stronger, or weaker, to certain stations depending upon the reception mode. For instance, an antenna with a higher radiation lobe will -scatter- (say off of terrain, buildings, power lines etc) better and invariably result in a stronger signal farther away. However, it could be at the expense of signal strength closer to the source. However, they are all the same physical length and physics tells us that they are producing the same amount of energy.

>If I was an HP trooper, I'd pull over and ticket ANY local cop
>who exceeded the speed limit unless he was on an emergency call. How's
>THAT for a sense of "humor

Pretty damn stupid idea if you knew what you were talking about. That has been done before by many a rookie highway patrolman. The result? - The ticketed local officer finds out where the trooper lives (very easy if your a cop), contacts the local department which has juridiction over the trooper home and explains the situation. Local department then proceeds to ticket the troopers wife, children, etc. (local cops stick together very well when it comes to these things). Most of the time the original ticket given to the local officer is "lost". If that happens, the the tickets given to the troopers family are also "lost". If this doesn't happen, then local agency stakes out the original troopers commanding officer and stops him for any old traffic violation, hands him a ticket and says "compliments of Trooper XYZ (the original)" This solves the problem and typically results in an ass chewing for the rookie HP trooper that started the whole mess. The whole thing is called a 'ticket war' and it happens more often then you may think. So, Jerry, why don't you just go back to playing cop with your little scanner in your car.

I have an el cheapo CB setup. I have a 4' magnetic mount antenna, made in Chiny I think, with 17' of coax on a Radio Shack CB, TRC 489. I know that "it all depends" and no, I haven't had the antenna tuned, I am going to buy a Wilson 5000 soon. BUT, how far can I expect to transmit? How far can I receive? I spend most of my time on a fairly open highway like Route 95 on the east coast. I will gladly accept the ribbing and miscellaneous bravo sierra, but I would appreciate a good SWAG as to what I can expect. Thanks.

For the straight dope, the real info on speech processors type this phrase "speech processor for cb" at the search engine entry window for "AltaVista", or "Northernlight" or "InfoSeek/GoNetwork" . You will learn about all the speech processors out there and how they will help your Audio Modulation kick butt. No word of mouth info from a trucker named Scooter or wives tales from some tech guru named Triple Nickle. Big truth right up front. If you work AM only don't waste your time or money on a speech processor. If you work Side Band as well as AM you need a speech processor. Side Band people will kick Audio Butt with a speech processor. Search on and be informed!

You might wish to brush up on part 15.
All recievers that use a local oscillator must be part 15.
The LO RF energy is what is restricted.
Often it will be outside of the ham band.
IE, assume a 10.7Mc IF and a receive frequecncy of 146.000
The LO will either be 10.7Mc above (156.70) or 10.7 below (135.300)
Leakage on a low side LO could really cause problems with civil aero
operations.
I do not have the rules with me, put the leakage is spec-ed so as to not carry
very far. As a side issue, you can use a scanner [either scanning HT or
Radio Shack like the Pro34] as a RF generator. You have to figure out if it
is hidg side or low side LO etc, but they can make a dandy calibration source
for those on a budget.
And I have seen super regens that leaged mW to the antenna. Would wipe out
reception for 1/4 mileor more.

: Uniden Washington base with a R/S A99 antenna. I am open for
: suggestions. My antenna is appx 35 feet in the air.

A station running a clean and legal power signal can do this. It can
be a case of the receiver not having good enough adjacent channel
rejection. It could also be a case of simple rf overload.

If the rig has the capability, try turning the rf gain down a bit.

Normally what you say would be true, however as device that is
intended to transmit (it IS a Transceiver), it is exempted from most
of part 15. (It is pretty hard to build a transmitter that complies
with the conducted and radiated emissions requirements of part 15).

Actually pretty stupid Jerry. Cops have an "us verus them" mentality and stick together. If they were like the cops I know, they take your plate number and have the locals ticket you. When the local pulls you over he smashes your tail light with his baton and writes you up no brake lights. He may even have your car towed since its a danger to drive without the brake lights. Not sure that I could blame them after your juvinile taunting.

1. I don't listen to cops on scanners. I don't even have a radar detector--don't need it, don't want one. Haven't had a speeding ticket in 20 years. I don't speed. Period.

2. My equipment is used mostly for search and rescue for USAF. The rest is hobby (CB and ham).

3. I DO have a problem with cops who think they are above the law they are sworn to uphold, i.e., speeding well above the limit when there is no reason. This is obvious when there is a police car two counties away from their jurisdiction speeding 10-15 MPH above the limit. They SHOULD be ticketed just like anybody else.

4. I am fully aware of the "fraternity" of LEOS who consider that they have a "right" to speed for no reason, and consider such a "perk" of their jobs. My ex-brother in law is a local LEO, and we discussed this very thing.

5. I was once almost rear-ended by a city cop who was speeding. If I had not floored the gas and jerked over into another lane, we would've had a serious accident. I got his car # and went directly to the police station to report the incident. Turns out that he was 5 MILES away from his assigned area visiting a girl friend. He received a call, and desperate to get back without getting caught by the shift sergeant, he was racing back to his assignment. He DID get into serious trouble with the shift captain because I was there to witness the chewing out he received. Being friends with the captain, as well as a number of officers, when I told the captain about the near wreck, he literally hit the roof!

6. Some departments have strict rules about speeding unnecessarily, and WILL discipline officers who think they are above the law. A local deputy was once several counties away from here (it was on the news), cruising at 80 per. An NCHP officer stopped and ticketed said deputy for which she had to go to court. The judge was not amused by her pleas of "professional courtesy", upheld the ticket, and she had to pay the fine (GOOD!). She was further suspended by the local sheriff for 2 weeks without pay. (Also GOOD!) There is NO good reason for ANYBODY to be speeding, I don't give a damn WHO it is. If there is a genuine emergency, chasing bank robbers, or apprehending other dangerous suspects, fine. I'll gladly yield the right of way to any blue or red light, but the idea of some cop who thinks he is not beholden to obey the laws just like everybody else, that a crock of sh--! Other law-abiding police officers, of whom I know many, I respect, honor, and appreciate. Rambos who think they are God incarnate, I DON'T! They have no business being police officers. Period.

All readings taken with signals below S-9 with 1 unit equal to a 6db gain, 1/2 S-unit equal to 3db gain. Some judgement used in smaller figures!

I did not say this was a scientific test, just a controlled point of reference. Don't get lost in how many db is equal to an S-unit. The question is why this antenna design is showing a measurable increase over the other stated antennas. I am not stating gain as if I feel this is a true db gain figure. I would have to borrow Wilsons test lab for that!

Sarcasm, Bill. That was written for your benefit (and for those on your side of this debate). Besides, I think I said that there was "virtually" no enforcement, not that there was absolutely no enforcement at all.

> I will repeat my prior comments:

No need to repeat yourself, Bill. I've already read what you have said, and have chosen not to answer. That choice was made because I simply don't accept your notion that there will be that much additional costs involved, so there is little reason to answer your question about where additional money will come from.

> If you think it will ONLY take a guidebook to "qualify"

> serve as witnesses in court on these prosecutions, then
> you haven't been to a court in a long time. Reading
> an "FCC Guidebook" on CB" isn't going to qualify anyone.

Other than perhaps police procedure, an arresting officer is never called to be an expert witness on any subject matter before a court of law. The arresting officer simply makes the arrest, and testifies on events during that arrest. Assuming the person wants to challenge the arrest (plead not guilty), it is up to the court, after hearing all sides (including expert witness evidence), to decide the fate of the individual.

An arresting officer does not have to know how a vehicle is designed to write a ticket for speeding. Likewise, he does not have to know that much about the technical aspects of radio to write a summons for violations of the radio regulations. The only knowledge really needed, in either case, is that required to know that a violation has probably occured. As stated above, the court will then decide if that person is

actually guilty.

He does have to know what the speed limit is and that the car was going in excess of that speed.

They also have to know what the violation is and have a valid reason to believe that the individual is in violation, or can they be arrested for "possibility of suspicion"? This would require a working knowledge of the FCC regulations.

A bad anaolgy is the measurement of a motor. It measures almost a short, but draws far less current. This is because it appears to be electricly a higher resistance than it really is because the way the magnetic winding react as the alternating current generates and then tries to reverse the polarity of the magnetic field.

An excellent point! Most radio noise blanking circuits use a separate wideband receiver to detect pulse noise, and then momentarily cut off your main receiver during those short duration pulses, thereby eliminating (or reducing) noise. The problem is that the NB receiver and detector will respond to strong local signals and mix them into your main receiver, which makes the bleedover much worse.

Just about any radio that I've seen does a better job of rejecting bleedover with the blanker off.

The ANL, on the other hand, is just a pulse shaper circuit, and should not affect your bleedover.

>
I, for one, do not .. and that's the rub! I read about a man who came
home from work to find his front door off the hinges, the lock cut off
his gun safe, guns and ammo strewn across the floor openly available to
any kid who wanted one, and a copy of a search warrant annotated
"nothing found". The basis for the search was an unsubstantiated report
from his disgrundled ex wife claiming he had unregistered machine guns!
I'd just as soon not have the same LEOs checking out my ham shack.

> Maybe only LEO's who PERSONALLY hold at least one FCC radio license (any
> service) should be the only ones who qualify for enforcement authority. At
> least then, we would get LEO's who understand radio.....

That might help but it's no guarantee. The LEOs who perp'd the above
search knew enough about guns to see none of those in the safe were
illegal.

The FCC has demo'd a reasonably sane approach to enforcing their own
regulations; I'd really hate to see that turned over to a bunch of
cowboys; not even to cowboys who hold FCC licenses. Imagine coming home
to find your house a shambles and a warrant annotated "nothing illegal
found"; all because an clueless neighbor claimed that you had illegal
equipment!!

I once had a neighbor up in my face shreiking about how I'd ruined his
football party even tho I hadn't been home let alone on the air. All
durring his tirade his 7-year-old was tugging his sleave. Finally he
turned on her and shouted "what!"; to which she replied "Don't you
remember daddy, it was moma's hair drier.". Didn't shut him up a bit!
Only reason I didn't dot his eye is, guess what, he was a local cop!!
Imagine him and his buddies rooting thru your gear!

508. "NO Means NO" - ACA Proposal

Newsgroup: rec.radio.cb
Date: 2000-10-05 00:00:00 UTC
From: "ACBRO 26", Pas <acbro@my-deja.com>
Message-ID: <8ri6e9$7dt$1@nnrp1.deja.com>
Source record: 54411

ACBRO
Australian Association Of Citizens
And Band Radio Operators
Incorporated 1980)

"NO" Means "NO"

It overwhelms me as to the arrogance, lack of respect and consideration that the Australian Communications Authority (ACA) have for the majority of the Australian Citizen's Band (CB) Radio fraternity. It appears that the ACA have a lack of regard for the expressed concerns by the CB fraternity with regards to the Citizen's Band Radio Service CBRS) in Australia.

Throughout 1996 and 1997, the ACA sought to introduce legislation that would see an introduction to a Continuous Tone Coded Squelch System (CTCSS) as well as a Telemetry and Telecommand System on the CBRS. 82% of Australia's CBers had opposed the ACA's proposal. The ACA then dropped the matter and nothing more was heard about it from them.

"The beginning of the end of the CBRS or is it?"

However, a few years later, (now) the ACA are once again, attempting to introduce legislation to implement these systems on the CBRS.The ACA is seeking, once again, comments about the proposed variation of the Citizen Band Radio Stations Class Licence with regards to the CTCSS and the Telemetry and Telecommand System.

ACBRO is calling for all in the CB fraternity on UHF and HF to unite once again against ACA's proposal. It is important to note that a non-response to this issue will enable the authorities to assume that a "no care" attitude exists and your inaction will indicate no objection to the proposal. Please head on over to

http://welcome.to/acbro

and follow the links for more details and about how you can lodge an objection.

Thank You.

> Hams need more license classes and/or technical endorsements.

With all due respect for nostalgia (I'm 61 myself) it'll never happen; not because of leadership good or bad, but because technology has moved manufacturing and cutting edge research beyond most individuals' resources. Time was, Hams were building almost all their own gear and pushing the envelope of comm's technology but now integrated circuits require a $million investment to produce the first one, after which they're a penny apiece. Sure, I could build a 1940's technology rig and many do just for fun, but it'll likely cost more for the parts than a new "appliance" rig that's far better. So, why demand that kids learn how to design and build antique gear when 99% of them -and us- will never do that (again)?

No, the future of Amateur Radio, if it has any future at all, lies in providing better personal and recreational communications for enough people to provide the political clout to keep the Ham bands dedicated to that purpose.

Most CBrs are prolly interested in traffic and smokey reports but most of the ones on these NGs are more serious communicators, many doing the same things hams do albiet illegally .. to everybodys loss. That's why I encourage these CBrs to become Hams and Hams to lobby for removing artificial barriers to them doing that. My $0.02

The only drawback to having the mike lead wrapped around these filters, is that you lose about 6" of useable length when you try and stretch the cord out a bit. Other than that, I am very happy with the radio. I have only had this radio for a week, and so far have copied the South of France, and also Venezuela ! Both are a good distance from up here on Toronto.

Richard.

522. 35 foot home made CB antenna?

Newsgroup: rec.radio.cb
Date: 2000-10-05 00:00:00 UTC
From: karzmar <karzmar@uswest.net>
Message-ID: <39DCC3F1.8EAA5F81@uswest.net>
Source record: 54425

Is it possible to make a home made antenna with which to measure the effectiveness of the shorter wave length antenni sold commercially. I was thinking of just inserting a 35.75 foot wire into the input signal and grounding the unit and then comparing the range with a whip antenna from radio shack.

Ron

> As for (a), it would only take the FCC about an hour to write up a
>list of radios "not authorized by the commission."

You've got to be kidding.....the only list that the FCC or
anyone else can produce with any credibility is the list of
those radios which WERE authorized at the time of the list
production. New items can be added at any time.

>In fact, I could
>make up a list in a few minutes that would cover 90% of the illegal
>radios used by CB'ers today. And the same thing could be said about a
>list of the common linears.

And your list would cover what's out there today which will
be differemt from what's out there next year....unless you have
a secret pipeline to the illegal equipemnt manufacurers and
importers....

"90%" and "common" are not good enough for enforcement
purposes...ya' gotta' be 100% on the money or the case falls
and the lawsuit starts. Do you realize that about five years
ago almost 1/4 of the Los Angeles PD's budget was expended on
settling false arrest and rights violation lawsuits.....

> Answer: Because he was in possesion of a radio that is included on a
>FCC produced list of radios "not authorized by the commission," which
>according to that list is a violation of FCC regulation (whatever).

And what will happen when said radio gets accepted but the
list (assuming that such a list could be produced) isn't
updated for one reason or other> Is Officer Oscae going to ask
the dispatcher to do a "wants and warrants" type check on the
radio type? Now we have enforcement more complicated than
letting the FCC do its job in the first place.

>> What is your training as to the law regarding
>> CB operation?
>
> Answer: I went to school so that I can learn how to read, which
>enabled me to read the list that the FCC provided.

The fact that the CB Rules are written in language at the
sixth-grade reading level is a trap for the unwary (the
equipoment certifiocation regs are not).

Reading the regs is only half the job. What do you do to keep current on case and staff interpretations regarding those and other radio regulations?

I don't think so, Ron. The radiation pattern around a half-wave vertical dipole in free space is shaped like a donut or bagle with the antenna thru the hole. A 1/4 wave vertical with a near-perfect ground plane approximates that pattern. Other lengths yield "jagged" beam shapes with more then less power at different elevations. "Gain" can obtained by making the antenna longer up to a point because that tends to flatten the "bagle" putting more power on the horizon. Even more "gain" can be realized by stacking sections of antenna. That's good if you're on a sandspit in the ocean but not necessarily so good if the stations you want to reach are on hills and you're in a valley, or if you're on a boat, etc., where the antenna gets tilted. There are also practical physical limits. If you're interested in experimenting with antennas you'll find it mucho easier on higher frequencies like the amateur 440 band where a 1/4 is only a few inches instead if feet. Just for kicks go to <http://www.clicktron.com/ham/index.html> and try the Technician exam. If you're smart enough to come up with the 33.75 ft number I think you'll be surprised how well you can do and no code is needed for full priviledges above 50MHz.

Ham antennas in the length you mention are common, being 1/4 wave on the lower frequencies we use for DX when the 10m band (and CB) isn't open & most build their own. The top rails for chain link fence are strong enough and come in up to 20' lengths swaged to connect together and a coke bottle makes a good insulator. A 3/4 wave like you suggest might work great but I think you'll need at least 4 1/4-wave radials and an antenna tuner. The only way to tell if it works better than some other antenna is to try it and see, but that's half the fun! Check out <rec.radio.amateur.antenna> ; there's umpteen dudes arguing over who's antenna is best!

Connex radios are very good radios. A Connex 3300 is basically the exact same radio as a Galaxy 33. The only difference is the face plate and the power settings. RCI manufactures Galaxy, Connex, Ranger, Super Star, Texas Ranger, etc.... Connex radios do not have as good of a warranty as other radios, but they are of the same quality. I recommend either the Connex 4400 or 4400HP if you are going to get one. These radios are built on the same circuit board as the RCI 6300 series, and many other "new" RCI radios. This is arguably one of the best circuit boards on the market. I suggest you check out this page for more information.

I agree with the poor design comments.

> I dialed-in a TNT twelve pak one time and it was awesome. The
> mods were extensive and a real pain but it was stable and it wasn't even
> getting hot at a 400W level.

It is literally impossible to get a 12 pack to be unconditionally stable unless
you completely remove the stock relay board that is in the rear of the chassis
standing perpendicular to the main board.

At about 600 watts, there is enough positive feedback through that relay board
to cause the amplifier to burst into parasitic oscillation.

Unfortunately, those folks with minimal equipment, or those with good equipment
that don't know how to use it, interpret that as apparent 'swing' as being
awsome.

> Try that with any of the broadband amps like
> Texas Star, Palomar, Messenger, Galaxy... etc. and that sucker will get red
> hot.

I will take a HOT Texas Star over a Cold TNT anyday!

Now if you remove the relay board (or bypass the driver) in the twelve pack,
and drive it with an external driver, the TNT is transformed into a decent unit.

Good advice and absolutely correct!

> Method 2:
>
> Get a 12 volt regulator (one of the 5 amp TO-3 devices works GREAT). Run
> your bias supply off this. This will allow volting, while keeping the
> transistors biased.

Since the source supply for the bias is mixed with the RF going through the
antenna relay contacts, you would have to be very careful where you put the
regulator, and how well you bypassed it.
If you decide to use that method I would recommend that you source it from
where the transmit lamp is located and use a 10 volt reg. instead of a 12 volt
one because most of those 3-term regulators don't work very well unless there is
at least 5 volts across the series pass element.

Otherwise, this was also good advice from Toll free.

> Using either one of these two methods will get you to around 16 to 17 volts.
> Any higher, and your talking major changes to the tuning and such.

You can go up to 20 volts safely if you regulate the bias supply and also
change out all the 16 volt electrolytics to 25 volt ones.

The Hunter amps were very well designed, but their quality depended on the
individual builder.

Value depends on how it looks and how well it works.

568. Re: X-force XT-400 Amp !!!

Newsgroup: rec.radio.cb
Date: 2000-10-05 00:00:00 UTC
From: "Express Electronics Inc." <exports@exportradios.com>
Message-ID: <2W8D5.509$PU4.78584@nnrp2.sbc.net>
Source record: 54471

I appreciate the compliment Mike. It is always good to hear that my customers are, as the trucker's say on "19", "Walkin' that dog, and kickin' that cat." I used to use the XT-400 in my '99 Ford Ranger Ext Cab truck. (I only sold it to get an X-Force X-600.) I had two batteries and one 100 amp alternator. I put the second battery in the ext cab under a shelf I built. I also ran the amp back on this shelf. I ran #6 AWG wire from the amp to the battery. (I ran the ground to the battery because I mounted the amp 2 ft from the battery.) I am using a Galaxy 55(nothing clipped) with a MRF477 final and a Wilson 5000 magnet mount. My SWR's are 1.1/1 with very little reflection as measured on an SWR analyzer. On a Bird 43 peak meter, I was deadkeying 400 watts and swinging 975 watts with my truck idling. With my truck turned off, my headlights on, and my dome light on, the amp was deadkeying 400 watts and swinging 975 watts. This without dimming the lights. I can talk 10 ft or 10 miles clearly with little or no distortion. I have drivers telling me all the time that they cannot understand how I am so loud, yet so clear. I tell them "2 reasons." (1) I am using an X-Force amplifier. (2) There is absolutely nothing clipped or removed inside of my radio.
Anyways, I appreciate your order and I look forward to helping you out in the future.

Hello to all;

I have and old Johnson Messenger Two Twenty Three tube CB radio for sale.
The unit isnt working but I think someone could bring it back to operation
easily.

Yves.

I don't want to step on toes but I must be honest, X-Force does not win at
all the keydowns. There is a hell of a lot more to it than an amplifier.

Why? A list of radios "not authorized by the commission" would be able to cover almost all of the commonly used non-authorized radios out there today. And it certainly wouldn't be that hard to update that list every six months or so.

> "90%" and "common" are not good enough for enforcement
> purposes...ya' gotta' be 100% on the money or the case falls
> and the lawsuit starts. Do you realize that about five years
> ago almost 1/4 of the Los Angeles PD's budget was expended on
> settling false arrest and rights violation lawsuits.....

Huh? A SuperStar 3900 is an non-authorized radio. If it were on a list of radios "not authorized by the commission," that would be 100% on the money.

Likewise, a Galaxy 88 is an non-authorized radio. If it were on a list of radios "not authorized by the commission," that would be 100% on the money.

And, a Uniden HR-2510 is an non-authorized radio. If it were on a list of radios "not authorized by the commission," that would be 100% on the money.

None of these radios are ever going to authorized by the commission to be used in the citizens band. Therefore, we're still 100% on the money.

A Texas Star linear is an non-authorized device. If it were on a list of devices "not authorized by the commission," that would be 100% on the money.

And the same thing could be said for a long list of other
non-authorized radio equipment commonly used in the citizens band.

In other words, there is no vagueness in a list of commonly used radio
equipment that is "not authorized by the commission." Hince, there is
no risk that a case would fail, and lawsuits filed, over something like this.

> And what will happen when said radio gets accepted but the
> list (assuming that such a list could be produced) isn't
> updated for one reason or other>

Again, none of the radio devices listed above will ever be "authorized
by the commission" for use in the citizens band. The same with a long
list of other radio equipment commonly used in the citizens band. So,
there is no chance that these devices, now "authorized by the
commission," will ever need to be removed from the list.

> The fact that the CB Rules are written in language at the
> sixth-grade reading level is a trap for the unwary (the
> equipoment certifiocation regs are not).

There is no need for the officer to know one word of the regulations
to check a list of radio equipment "not authorized by the commission."

Ron,
I don't think you'll like the results. That would be on the
order of a full wave, a long wire antenna. The SWR you will see
won't be anywhere close to a good one, with out a tuner.
'Doc

hmmmm,
are you listening on this frequency, or just picking up the spectrum splatter
from him? if you can't hear the other party, chances are, you are probably
hearing him cuss at no-one in particular, or are not in the right position
to hear the other party (poor line of sight location or outside the skip zone)

Well, you might want to reread part 15.
Receivers and the CPU/Logic section in receivers or transceivers must meet leakage requirements. Type acceptance is dependent on the rx/logic meeting part 15.
And I was wrong when I said superhets.
Any receiver that generates any RF, eihter superhet, regen, super-regen or autodyne must meet part 15. And I think it applies to the IF leakages as well.
I have 2 Icoms. IC-25 and an IC-2AT, ND A UNIDEN mcb-25 [COMMON 3.5Wt 27mc CB] that have part 15 notices on them.
I don't have my regs with me, but CB Tx's, other than the 100mW toys, are not part 15 devices.
I think my Kenwood HF transceiver back home also has a part 15 sticker.
And the sticker is for the Rx and logic not the Tx. Any spurs etc are governed by type acceptance.
Have a good day.

>around on the local police repeater, and then the FCC popped him.
snip
The VCO is part of most FM radios.
The AFC will accept audio and the receiver will "transmit" on the LO.
Some of the older tube radios make very nice "repeaters". Where we used to
live I could not receive a certain distant FM radio station. But I could
receive it on a ancient tube radio connected to a decent outside antenna.
So I coupled the Rcv audio into the AFC "port".
In the "stock" mode, with no etra antenna off the LO, the transmit range was
only about 50'. But with a 1/4 ground plane the range was extended to about
1000'. And since the radio was "locked" to a commercial station. the "Tx"
stayed right on frequency. I later rigged it to accept an audio signal form
any other source in the "Comm center" [Ham Shack]
I used this up until several years ago when the tube radio died and I found a
"baby monitor" at a good will store for a few bucks. Coupled to a decent high
antenna I could re-broadcast any RF to a scanner and recieve it out to several
1000 feet.
There could be many situations where it would be usefull to re-broadcast
some audio to your common garden variety FM BCB rcvr.
While this clearly violates part 15, and as a ham I should not encourage
anyone to break any radio rules, I have come to the opinion that if the people
charged with enforcment of the rules will not live by them, then screw it,
they applie to none.

The "round number" usually used for journeyman funding is $100K
per year - $60K salary to the employee and $40K in support
salaries and expenses (rent, vehicles, etc). Does not include
travel expenses.

That's TWO agents...equally improbable.

>> I am skeptical but when the
>> locals smell the FINE money that the FCC
>> mandates to be collected who could blame them for acting like sharks at
>> feeding frenzy.

>That's an interesting point. Just WHO would get any
>federally mandated fines. Does the law call for any
>fines to be retained by the local entity...and even if
>it does, that does NOT mean the local police force get to
>keep that money at all.

"Monetary forfeitures" are penalties levied by a (Federal)
administrative agency, whereas "fines" are penalties levied by
a court. Forfeitures can be levied only when there is specific
Federal legislation authorizing such, and with regard to radio
law enforcement, the law requires forfeiture penalties or
settlements in lieu of forfeitures to go into the U S Treasury
General Fund (i.e. the FCC does all thr work and doesn't get to
keep a nickel).

Why should it be any different for the "locals"?

There is a principle of US law that holds that a government
agency cannot get someone else to do for it what it cannot do
for itself. IOW, under this "contracting out" the "locals"
cannot have more power than the FCC has in the same situation.

Consider the following law school exam question:

Officer Oscar gets called to Citizen Charlie's home because of
audio rectification of the transmissions of "Ham" Radio
Operator Horace who lives next door and has a 11 meter ground
plane on his roof some 25 feet from Charlie's living room.

Oscar was thoroughly bored with all that "radio crap" that the Department is making him deal with - it's not the kind of police work that "real cops" should be doing - and consequently did not pay enough attention at the minimal training session when FCC Agent Fred said that hearing a voice on home entertainment equipment or seeing some lines on a TV is not sufficient to draw a conclusion that a violation has occurred.

Because he's been "on the street" sufficient time to spot "violative behavior" when he runs across it, Oscar junps to the conclusion that Horace MUST be in violation because his signal is LOUD and anyhow if he wasn't in violation, the signal would be on the channel where it belongs and Charlie's stereo wouldn't be picking it up. A pure nuisance and disturbance at that, and he has been trained to deal with nuisances and disturbances which are "real" cop work.

Oscar, loaded for bear, heads for Horace's house and knocks - loudly - at the door. Horace answers, and proceeds to inform Oscar that yes, as far as he knows he's running a legal CB radio on a legal CB channel, that he is fully in compiiance with FCC Rules Part 95, that under Section 301 of the Communications Act and FCC Rules Part 95 he has full authorization to operate that transmitter, that his own stereo does not react to his radio signals, and no, he respectfully does not want to make the station available for inspection by anyone but a duly-credentialed FCC agent.

The last thing Al wants is to let a police officer into his hone where the officer can then make a waranntless "plain sight" search for anything even if not related to the radio problem. The FCC agent cannot do that.

Discuss Oscar's and Al's options under the proposed law.

Here is where the law school exam question would end, and I put a lot of stuff in the question which normally would be expected to be brought up by the answerer, but let's go on.

Warning - as usual, I'm a "ringer" - I used to teach this stuff at the FCC Training Academy and in o-j-t <ggg>

1. Force his way in, a la Andy Sipkowicz on "NYPD Blue".

This is done only on TV....try it for something as minor as this in real life (in any place but NYC?) and Horace will own City Hall as well as Oscar's house, car, and wife after the Federal District Court hands down a judgment in his favor under Section 1983 (violation of his rights under color of authority).

The FCC does not have the authority to make forced entries and by the "others cannot do for you what you cannot do for yourself" rule neither would the "locals" enforcing the FCC's

rules.

Those FCC "forced entries" that you hear about are in accordance with a warrant for search and seizure issued by a Federal District Court and executed by the US Marshal or other Federal officers aithorized by the US Departmnent of Justice to execute warrants (FBI, ATF, DEA, IRS and the US Secret Service are agencies with which the FCC has worked). The FCC agents are there only as technical experts on scene to indicate to the executing agents which equipment is covered by the warrant and should be seized.

In a memorable CB seizure some 20 uears ago, Judge Samuel Conti of the U S District Court for the Northern Distriuct of California scratched out the pre-printed warrant wording "using necessary force" and wrote in "using only force deemed appropriate". When questioned about that he said "screw it up and you'll find out what I mean"....!!

2. Get a search warrant from a local judge.

A search warrant requires demonstration of reasonable cause to believe that concealed upon the premises to be searched is evidence of a crime or the fruits and instrumentalities of same.

Reliance only on inexperienced personal observations - Oscar doesn't do those things as a full-time occupation or even on a regular and frequent basis as an FCC agent does - may be enough for some judges but a warrant based only on that would be invalidated at a "probable cause" hearing, and when the defense easily proves that Oscar was professionally negligent (i.e. drew a conclusion that a trained officer in his shoes would never make) and nevertheless proceeded, the door is open to a Sect. 1983 judgment.

The FCC itself could not get a warrant with only the evidence above, and would need more conclusive evidence of overpower or out-of-band operation (relative field strength measurments including "before and after" readings, spectral analysis, frequency measurements, etc).

If the warrant is thrown out, so is all evidence obtained by use of the warrant, under the "fruit of the poisionous tree" doctribe of exclusion.

3. Issue a "summons" to Al for overpower / out-of-band operation.

Yhis is the same as (2) above - it would be thrown out for lack of probable cause.

4. Cite / arrest Al for creating a nuisance and/or disturbing the peace.

It is a principle of law that one does not create a nuisance by pursuing an activity that one is licensed/authorized for "in the public interest" as long as the action is within the conditions set by the license/authorization. Damages may be assessed if the plaintiff can show that the action, albeit in compliance with the license, is being done to egregiously and intentionally or negligently harm the plaintiff, but the standards of proof of intent or negligence are very high.

California's famous case involving the San Onofre nuclear power plant is the leading case in this area of law and normal ham or CB radio station operation do not cause problems coming anywhere near the threshhold level where the provisions set forth in that case kick in.

As long as Al does not raise his voice to Oscar or make threats or hit anyone, there's no "disturbing the peace". Interception of his signals by a stereo, no matter how loud, is not in that category because the cure is in the hands of the stereo owner, not the radio operator.

5. Turn the case over to the FCC.

This is what is being done now by PDs all over the country. The FCC can issue a monetary forfeiture for failure to make the station available for FCC inspection, which the locals cannot do by law, and for overpower or out-of-band operation upon sufficient technical proof that such has happened.

For Oscar to be able to state definitively that he detected overpower/out-of-band operation with the same degree of acceptance as an ARRL OO in a ham case, he would have to stake out the premises with calibrated equipment making the type of pre-inspection observations that FCC Fred would do.

That's why it takes so long to "make" a case. "Wham, bam, thank you ma'am" casnnot be and is not the FCC's style for field enforcement. Such techniques lead to sloppiness, and one "bad" case is enough to sour the US Attorney from taking future cases from that office.

Why pass such a contoversial Bill when the FCC is going to have to do the work anyhow?

Remember - others cannot do for you what you cannot do for yourself.

Okay, Bill, we've went round and round on this, and we are not going to agree, so lets stop repeating ourselves and move on.

> Then you have no concept or understanding of
> the true costs in both developing appropriate
> and complete technical training materials and
> in the actual training session costs themselves.

And now we're going to add training sessions to this. Look man, you need to get real. There will be no training sessions. And it will not cost that much to produce simple guidebooks to give officers enough information to enforce the things covered in the legislation.

Read the legislation again. It only extends authority to enforce (a) a regulation that prohibits a use of citizens band radio equipment not authorized by the Commission, and (b) a regulation that prohibits the unauthorized operation of citizens band radio equipment on a frequency between 24 MHz and 35 MHz.

As for (a), it would only take the FCC about an hour to write up a list of radios "not authorized by the commission." In fact, I could make up a list in a few minutes that would cover 90% of the illegal radios used by CB'ers today. And the same thing could be said about a list of the common linears.

As for (b), the owner's manual that came with my frequency counter is only four small pages long. It certainly would not take that many additional pages for the FCC to write up additional guidelines (such as how to insure the frequancy readout is accurate).

So, to suggest that a police officer does not have the intellegence to enforce this legislation, or that complex technical training materials will be required to educate the officer, or that it will require great technical knowledge about radio to testify in court about this, is all simply absurd.

> Question one to the cop by the defense attorney:
>
> Why did you arrest my client?

Answer: Because he was in possesion of a radio that is included on a
FCC produced list of radios "not authorized by the commission," which
according to that list is a violation of FCC regulation (whatever).

> What is your training as to the law regarding
> CB operation?

Answer: I went to school so that I can learn how to read, which
enabled me to read the list that the FCC provided.

Enough of this nonsense. Read the legislation, Bill. And then we'll
continue this conversation when you post something that is more relavant.

It is a 3 volt lithium coin cell with stiff wires welded on. I just went to RatShack and got a battery holder and the battery that fit, and put some wires to the board instead of putting the battery there. Just tape up the holder real good and secure it to the wire harness. Next time it dies you won't need to "operate" again.

The trouble with this antenna is that it radiates off the end of the antenna.
While the longer length will increase gain you are shining it all at the sky.
Makes for an interesting skip antenna though.

... Which would seem not to apply to those "freebanders" if they're using 10m amateur equipment....

What it really comes down to is: Poorly worded law.

...And how is the FCC going to put a radio that they don't know about (thus
"not authorized") on its not authorized list?

If a radio is authorized, that's because the FCC authorized it, and therefore,
they will have 100% of that list. It takes a mental midgit to think contrary
to this.

Having had your comments well and truly debunked on the Australian CB newsgroup now you come to another NG and whinge here. You were told by several people that your survey techniques were severely flawed and meant nothing. You use stupid figures that are totally wrong, pointing to them like they are gospel. You claim that the vast majority of CB users in Aust are hobby users - wrong, like you have been told already the majority of active users of the CB system (UHF in particular) are business and farming users. Stop doing stupid things and work out that the normal Australian CB user doesn't want to hear the stupid shit that your organisation, and you in particular are spouting.

I would like to see any info on the Dentron MLA 2500.. Good or bad.
I stumbled on to one that I can get for a real reasonable price. At least I
think it`s reasonable.
What is it worth ?
What drive does it require ?
What freq does it cover ?
Does it require a keying ckt ?
Does it cover am/ssb ?
What is your opinion of this amp ?
Thank you for your help.

Randy

G'day damn_it

I respect your opinion,

And if you are not in favour of the proposal then let that be your decision. But, if you want to challenge me on anything I said feel free to do so.

Unlike you, your tone in your post suggests that either you have good reason to accept the ACA propoasal or you can not conduct an intelligent debate or you have nothing else better to do then slam me on account of some insecurities you have.

Be real, be intelligent, be constructive and be open minded otherwise why do you bother in this newsgroup, instead go post your self in alt.flame because yur tone is not what can be considered to be a newsgroup discussion.

Get yourself into perspective with logic instead of just rambling on
just for the sake of it.

And how many more alias names are you going to use.....mmmmm?

At least be real and honest about yourself.

That's what they thot about "assault rifles". Congress authorized and BATF came up with just such a list plus criteria for what was and was not forbidden. If an Model XYZ Shutzeniron was on the list the mfgr promptly renamed it the model ABC and continued distributing them legally. BATF resopnded by adding the ABC to the list on a particular day, but what about XYZs that'd been sold b4 the list came out and now ABCs sold b4 that day. Then there was the "features" list: if the mfgr took the bayonet lug off ABC and renamed it the "Sporter" it became legal. And then Slick Willy stepped in and authorized imports of AK-47s from Red China but not from the USSR, et al! With dozens of mfgr's squirming to get "legal" it has become a LE nightmare! That's a path I'd not want FCC to follow.

Roger that! I'm a licensed Ham. It is completely legal for me to mod a CB to operate in our 10M band but few LEOs would know that little detail. All they'd understand is that I'd been operating a "CB" in an amateur band. They'd prolly call in the swat team to shoot my house down!

Its to fund the BBC, which is goverment run. They pay 90 pounds a year ($135.00) for a yearly permit. They also have "vans" that drive around and look for illegal sets, with a healthy fine if you get caught. It certainly is silly, just got back from there, and wouldn't pay 90 cents for the shows they have on TV.

Thanks to everyone who patiently advised me with my new radio purchase. I finally ordered it last night. An RCI 6900F HP peaked & tuned with 11 meters enabled, and a Wilson 5000 mag mount (remember, I have to move between cars). I ordered it from Dave at Express Electronics. The prices on their web page are a bit high for some items, but they cut me a deal that was as good as any I have seen on the web.

When I get it (ten days or so) I will let you all know how I like it.

Peace, Nick

hi richard,

both groups are having there troubles these days and i'm not sure how long theyll be around. the SD group has split in two parts and are constantly fighting over who really runs the group and where the HQ is. the AT group has a lot of silly rules and is losing members at a fast rate because of them. both groups require you to have at least 100 countries confirmed by qsl cards before you can join and have a yearly fee of about 30 dollars. they do this to keep out the newbies. i think you would be alot more happier with a smaller group that is more freindly and less fighting. you should check out www.limadelta.org or www.irdx.org both come highly recommended.
ps check out my signature for the Kp group. weve been around since 82 but were not for everybody. were not a qsl oriented group. were mostly old time ragchewers that like friendship better than qsl cards. we welcome others of our type.

Uh, er,

I think you misread it. What they are looking for are "bootleg" ops up on 10 meters. You know, like "Rabbit Ears" down in Fla. Just this week, I heard a trucker on 28.085 hollering, "BREAK 19, Anybody got a copy, there?" Hee! Hee! He sounded like he didn't even know what "channel" he was on. LOL! That's what they are after.

Amateur equipment is ALREADY not authorized to be used on CB. A ham
can modify a CB rig to work on 10 meters, but a CBer cannot "modifry"
(spelling intentional) a ham rig to work on 10 meters. WELLL, he can,
but it is illegal to use it.

> suffice?

try it , run it for a bout ten minutes , feel the wire , if its warm , or hot
, or melts , you need to go bigger .

triple up would not hurt , better to over do it than under do it

While some of it was first-rate, I wouldn't give a whole lot for most of the
beer either.

You do have to admit that the 1 pound coin beats hell out of our silly
attempts at a dollar coin.

In article , kd6lvw@bde-arc.ampr.org says...
> "... [W]ill receive guidance ...": There's the problem. They will NOT - not
> without an increase in FCC staffing to have personnel available to train and
> give the guidance to the local LEO's that's needed - and we all know that this
> won't happen.

Here is what MAY happen:
Law gets passed.
FCC, through the ARRL, enlists the AAs, or OOs or whatever to help guide
LEOs in identifying illegal equipment.
LEO, along with helper setup a checkpoint, (maybe along with a
radar/speed check).
Antenna sighted, and off they go.
LEO gets to driver window, and notices radio equipment, and asks to see
an Amateur license. Driver hasn't one, so along comes helper to inspect
equipment.
Driver has what appears to be a legal Cobra radio, but also has an amp.
At this point there several options.
Pictures taken, and a ticket issued.
Equipment taken, and a ticket issued.
Car towed in, and tickets issued.
The local cops will have no trouble recruiting "helpers" from the local
HAMs.
Think about SKYWARN.
People jump into their cars, and drive INTO bad weather.
FOR NOTHING.
This would be way more fun.
Same thing for house inspections.
Neighbor complains. LEO picks up helper, and off to the house with a
radio.

> You have assumed that the U.S. Government is going to follow through with this

Randy,
Some amplifiers just are not worth having. Not that they
don't work okay, just that they are such a 'pain' to keep
running, availability of tubes, and other parts that may be
specific to that particular amplifier. I think the MLA-2500
is one of them.
It requires something between 25 and 100 watts drive, does
require a keying line, will do AM but at a reduced output, and
full output on SSB depending on the amplifier's condition.
Personally, if it isn't a 'give away' price, I think you'd
be better off with something else.

A 8 pill will draw lets say on the high side 20 amps per pill and the 20 amps would be at full output at 20 volts but lets assume 20 amps per pill that would be 160 amps of current needed .. You said your run was 3' -6" run max so at 160 amps .. 2 guage will work fine for you ...Take it from there ...

> to agree, so lets stop repeating ourselves and move on.

OK, we agree to disagree.
I note, however, additional flaws
in your logic below.

> > Then you have no concept or understanding of
> > the true costs in both developing appropriate
> > and complete technical training materials and
> > in the actual training session costs themselves.
>
> And now we're going to add training sessions to this.

If you have no training, you have
no credibility in court.

The "I read the manual" doesn't cut
it at all. NJ reuires a full week of
training to "qualify" police on the use
and operation of the plain vanilla radar
gun used for speeding violations. If
officer Smith can't show he has
had that training, there is NO
speeding conviction. And you think the
intricacies and nuances of illegal
CB operations won't require a similar
training to gain court admissable
evidence? You are kidding only yourself.

> Look man, you
> need to get real. There will be no training sessions. And it will not
> cost that much to produce simple guidebooks to give officers enough
> information to enforce the things covered in the legislation.

I hope you are right as to the lack
of any formal training...because then
I know this law will be meaningless
and I can forget about any police getting

involved at all.

> Read the legislation again. It only extends authority to enforce (a)
> a regulation that prohibits a use of citizens band radio equipment not
> authorized by the Commission, and (b) a regulation that prohibits the
> unauthorized operation of citizens band radio equipment on a frequency
> between 24 MHz and 35 MHz.

I comment on this in a separate
posting earlier today.

> So, to suggest that a police officer does not have the intellegence to
> enforce this legislation,

I have said nothing about the intelligence of
the police. What I do say is that there MUST be
adequate training to be able to have a LEO appear
in court to gain the conviction you think
can happen.

> or that complex technical training materials
> will be required to educate the officer, or that it will require great
> technical knowledge about radio to testify in court about this, is all
> simply absurd.

Feel free to believe it is absrd
if that makes you feel good. I just would
love to have a front row seat to the first
"untrained" cop that faces cross examination
on the evidence s/he is in court to
present. The defense attorney will have
a field day.

> > Question one to the cop by the defense attorney:
> >
> > Why did you arrest my client?
>
> Answer: Because he was in possesion of a radio that is included on a
> FCC produced list of radios "not authorized by the commission," which
> according to that list is a violation of FCC regulation (whatever).

And just HOW did the cop ever get to inspect
the radio to begin with?

On what basis does he determine that a violation
occrred in the first place?

If I have an ICOM TS-450 (a well recognized ham
radio transciever) but I do not yet have a ham
license, would the cop arrest based on the
radio not being on an approved list of CB radios?
Now before you answer, go back to the other question
which requires that he LEO establish that ANY

CB operation is, in fact, being done with that
euipment.

> > What is your training as to the law regarding
> > CB operation?
>
> Answer: I went to school so that I can learn how to read, which
> enabled me to read the list that the FCC provided.

ROTFLMAO!!!

> Enough of this nonsense. Read the legislation, Bill. And then we'll
> continue this conversation when you post something that is more relavant.

So how come you seem to be a minority of one
as to your beliefs? You offer NO legally
defensible statements (and when you try, Phil
more than clobbers your comments).

In your defense of this law, might you be a LEO
yourself?

If yes, that at least explains your defense
of the law to some degree.

Cheers,
Bill K2UNK

OK so far.

> FCC, through the ARRL, enlists the AAs, or OOs or whatever to help guide
> LEOs in identifying illegal equipment.

Then those AAs and OOs had better be ready to
be witnesses in any prosecution effort
that stems from their involvement.

> LEO, along with helper setup a checkpoint, (maybe along with a
> radar/speed check).
> Antenna sighted, and off they go.

WHAT???

What does the antenna signify?
When did the mere use of an antenna constitute
probable cause for any investigation at all.
Sorry, you lost it right there as to any
conviction. The LEO has no right to just
stop a vehicle because it has an antenna.

> LEO gets to driver window, and notices radio equipment, and asks to see
> an Amateur license.

WHY must anyone show the LEO his or her amateur
license, even assuming they have one?

> Driver hasn't one, so along comes helper to inspect
> equipment.

Based on what probable cause?
Do you see how many flaws this scenario has?

> Driver has what appears to be a legal Cobra radio, but also has an amp.

Let's assume it went this far for argument.
Do you expect the AMP to just be sitting
there in plain sight? If the amp is
secluded, then all you have is a legal CB
radio and that is the end of the stop.

> At this point there several options.
> Pictures taken, and a ticket issued.
> Equipment taken, and a ticket issued.
> Car towed in, and tickets issued.
> The local cops will have no trouble recruiting "helpers" from the local

I would absolutely work AGAINST such involvement
by hams.

> Think about SKYWARN.

OK, I thought about it, so what does it
have to do with this?

> People jump into their cars, and drive INTO bad weather.
> FOR NOTHING.

That's their choice. That has nothing
to do with law enforcement.

> This would be way more fun.

Which is exactly the kind of mindset that
scares me.

> Same thing for house inspections.
> Neighbor complains. LEO picks up helper, and off to the house with a
> radio.

Ditto my above....BUT in this case there
can be NO entry at all unless the occupant
agrees to it...OR a search warrant is obtained.

> > You have assumed that the U.S. Government is
> > going to follow through with this
> > - and that's where you went wrong.
>
> Don't underestimate the stupidity of the US government.

Charles, how can you write the comments
above and then make the concluding statement
you just did UNLESS this was all just
a bit of folly on your part regarding the
use of AAs or OOs to begin with.

Cheers,
Bill K2UNK

> Antenna sighted, and off they go. .....

Mr. Davis is an optimist. More likely ....

LEO looks into car and sees a "CB" just like the one in his prowler connected to and amplifier and without further ado invites the driver out of the car to lie in the grease and dirt while he "documents" then confiscates his find.

From there two possibilities emerge:

a) The driver prudently accepts to this abuse. Charges are dropped when he gets to court. His equipment is returned damaged beyond repair. or...

b) Instead of doing a belly flop into the grease, the driver tries to explain that he is a Ham, licensed to own and operate the equipment. He is thrown (perhaps even beaten)to the ground for "contempt of cop" and cuffed while his gear is ripped from the car. He says he's going to get a lawyer and sue so a bag of cocaine big enough to charge him with intent to distribute is found in his car. He ends up doing 5 years.

Impossible? A Fredricksburg Va LEO lawfully took a gun from a teen but kept it instead of turning it in. Some time later he wounded himself with it. Knowing he'd be in deep do-do, he radioed in to say he was stopping a car with illegable tags then, moments later, that an occupant had shot him. Naturally, his partners in crime stopped every car matching his loose description they could find - about a half-dozen as I recall - and against all odds found big enough bags in each and every one of them to charge everybody with dealing. These people had to make bail and hire lawyers while the police sought a shooter who didn't exist. Months later someone found the gun and the LEO finally confessed; whereupon the State's Atty dropped the charges against the "drug dealers", citing a lack of probable cause for the searches that'd disclosed the drugs and lack of any other evidence that any accused had any involvement with drugs whatsoever. So the people went free, with records branding them as drug dealers who'd got off on a technicality!

I could cite example after example of similar miscarriages ....

But the 11m "Freeband" isn't in the CB service or on CB frequencies, and
therefore falls outside of the authority in the bill.

["Freeband" = 27.41-28.0 MHz.]

666. Re: HR 2346 STATE & LOCAL COPS TO ENFORCE CB RADIO REGS

Newsgroup: rec.radio.cb
Date: 2000-10-06 00:00:00 UTC
From: "D. Stussy" <kd6lvw@bde-arc.ampr.org>
Message-ID: <Pine.LNX.4.10.10010061928520.20220-100000@exp.bde-arc.ampr.org>
Source record: 54576
Cross-posted to: rec.radio.amateur.policy,rec.radio.cb

But why would the ARRL care about enforcement regarding another radio "service"
as long as the problem isn't affecting amateur radio operation?

In any event, having "OO's" train LEO's won't lead to training that will stand
up in court.... OO's are not experts over the CB service.

Merely having a CB radio in plain sight isn't an indication that the rules
(illegal, excess power, or OTHER) is being violated - and therefore, there's no
probable cause to go beyond the plain sight search rule. In most
installations, the power amplifier will be out of sight (under seat, in trunk,
etc.), and a LEO cannot compel any person to perform any act that may be
self-incriminating under any law, rule, or regulation (such as asking that he
key the CB's transmitter).

Lastly, since LEO's can only enforce CB, which is unlicensed, they don't have
the authority to demand that an amateur (or any other licensed service: taxi,
tow truck, etc...) produce his radio license, since within the scope of their
authority, they're "overseeing" an UNLICENSED service.

On Fri, 6 Oct 2000, Charles Davis wrote:

You're gonna be dealing with local cops.
Person in car was speeding.(snicker) I've been pulled because I looked
like I was speeding. The antenna was just the trigger.

> > LEO gets to driver window, and notices radio equipment, and asks to see
> > an Amateur license.

> WHY must anyone show the LEO his or her amateur
> license, even assuming they have one?

Because there is a law giving the LEO authority to check into this,
remember? That's what this discussion is all about.

> > Driver hasn't one, so along comes helper to inspect
> > equipment.

> Based on what probable cause?

Because someone passed a law saying they can.

> Do you see how many flaws this scenario has?

None so far, that I can see.

Folly???? Or something that COULD happen?
My first statement was,
"Here is what MAY happen."
Maybe I should have said COULD.
Either way, It's not that far fetched, or workable.

I wholeheartedly disagree that the feds will in any way, shape or form, turn to hammies for enforcement of illegal cbers on the highways. Seek input, maybe, but trust a private citizen to assist in act that could result in charges o a ticket which may or may not be held up in a court of law, NEVER. The possible liability would squash that idea as sonn as it is raised.

We have had great results with these radios. We have sold a couple hundred of these radios and have had very few complaints. The main complaint is that they do not have a great amount of swing from a 1-3 watts deadkey. These radios have an unbelievable bandwidth covering 23.815-30.555MHz. The radio is designed on a SMD board, has 4 way dimmer, and many other features. Anyways, if you want to check out this new radio, check out the link below.

Thanks,
David

In article , kd6lvw@bde-arc.ampr.org says...
> But why would the ARRL care about enforcement regarding another radio "service"
> as long as the problem isn't affecting amateur radio operation?

Illegal CB activity affects the ARS. Most people don't know the
difference between the two. They think CB/HAM = same thing, therefore
ANYTHING affecting CB, effects The ARS, even if indirectly.

> In any event, having "OO's" train LEO's won't lead to training that will stand
> up in court.... OO's are not experts over the CB service.

OOs won't train. OOs or someone MAY assist.
I could do a durn good job of it right now.

You need to get out more!!!!!
What they are SUPPOSED to do, and what really happens are not always the
same.
I got pulled over once because I had long hair. Cop thought I was a
woman. IT WAS DARK. He then accused me of drinking. I was. Iced tea. He
then started to write me a ticket for starting off too fast from the
light. I informed him that I didn't spin any tires, and had a witness. By
this time he was pissed. I got by that time.

But if a guy with a gun is looking at you, and asking you to produce a
piece of paper that will in all likelihood get you off, whatcha gonna do?

Well, I hope the quality of Wilson antennas doesn't suffer after this buyout.

I have actually tested both amps. In fact, we used to sell Dave Made. All I'm going to say is this. We only sell the products that we can warranty and that we would put our name on. It is kind of hard to warranty something when the manufacture will not return your calls. We, at Express Electronics Inc. have 24 hour tech support via e-mail and are an authorized repair center for X-Force. Since the warranty is covered for life, we will fix your X-Force 10 days after the purchase or 10 years. If you can't in touch with us, I don't know what to tell you.

Thanks,
David

I agree the one pound coin does beat our attempts at a dollar coin. I think their 2 pound coins, especially the new 2000 series, were quite impressive.

> >Because someone passed a law saying they can.
>
> ROTFLMAO!

I can see you're not getting this at all Bill.
Stupid laws get passed. Stupid cops enforce them.
Maybe you have never been a victim of this. I have.

> >> Do you see how many flaws this scenario has?
> >
> >None so far, that I can see.
>
> Try putting on your glasses then :-)

Try living with the rest of us. Stupidity exists!!!!!!

> IF this even starts to happen at all, you can bet that
> they will NOT be in plain sight.

There are ways around this also.
Let's say a person gets stopped for something, and then is charged with carrying a concealed weapon. (It happens)
DUH!!!! If it was concealed, how did the cop find it????
They'll come up with a reason to "find" the amp.

> And once they are hidden, then what?

See above.

> >> I would absolutely work AGAINST such involvement
> >> by hams.
> >
> >I'll hold you to that.
>
> I would also ask the ARRL to oppose ANY such involvement
> under the auspices of ARRL OO positions, etc.
> Of that you can absolutely hold me to.

And I will. No matter how good someone makes it sound for the ARRL to help fix the mess those nasty CBers have made. Even if it gets attached to something like an antenna restriction bill to help Amateurs. Or a spectrum protection bill.
I hope under pressure you will fight it.

> >But just stop to think about what we are
> >discussing. I can see SOME Amateurs having a ball at this.
>

> >issued.
>
> On WHAT probable cause will any warrant be issued?

Neighbor called to complain. And don't say this won't work. It works all
the time. I can have cops crawling all over my neighbors, anytime I want
to.

> >Folly???? Or something that COULD happen?
> >My first statement was,
> >"Here is what MAY happen."
> >Maybe I should have said COULD.

So are you saying that if the relay breaks 2 years from now you will fix it totally for free? no cash no nothing, I wont have to pay a dime for parts? Could you please put this warranty in writing? I am thinking of purchasing one and would like to have all the info correct. Oh btw Thats funny I asked dave about you and he said he has never heard of you or your company, so how did you sell them .. Exactly how do you become an authorized repair center for illegal amplifiers ? Why would the manufacturer not just fix the amp themselves? How can i become an authorized repair center ? Is there a secret handshake or something
I know I know alot of questions but we are all ears and would like to know since you are stating certain facts ..

Well, let me just say this. I have answered at least 20 e-mails in the last 2 weeks that tell me they cannot get in touch with "Billy-Bob" Made amps. Besides, I have nothing but satisfied X-Force customers. Of these customers, I recall one that had a problem that was not covered under warranty. This is what I hear all of the time, "My Billy-Bob Made amp blew up and they won't answer my e-mail. Can you help me?" Customers like Mike simply pick up the phone and talk to us or e-mail us. I also realize that there is not much difference between Dave-Made and X-Force. But for the above reason, we chose to stick with X-Force. We are a repair center for them and we do honor their warranty. Trust me, the last thing I want is for someone to buy an X-Force from me, have it break, get charged to fix it, and then come here and run my name in the mud. Anyone that knows me, knows that I stick to my word. Even if "I" lose money on the deal. From what I have heard lately, some of the competition can't say that. Anyways, if you ever decide you want to buy an X-Force, just give me a call or e-mail me. I will always return your e-mail.

you peple aree nutz .

if i were to get pulled overbuy a LEO for lets say speeding . that DOES NOT give him the right to search your car . even if the law passes .

because even if the law pass's OWNING AN AMP IS NOT ILLEGAL !

transmitting with an amp is illegal . and it would be real hard for a cop to prove that i was using a two pill amp with the equipment in the standard cruiser . and i highly doubt that they will outfit special CB SWAT TEAMS with special cruisers with triangulation equipment , and all those goodies .

i can just see it now " CB-SWAT " armed with RF shields , and rubber bullets just in case those renagade CB'ers get roudy .

get real and get a life

I'm not going to argue with you, but I will answer your questions. We sold Dave-Made amps when we first started out. Before we exploded on the internet. The amps were actually purchased under the main owner's (then) name. We basically would order them for customers that wanted or had heard of Dave-Made. We ran into some problems with repair work, so we started selling X-Force. We are an authorized dealer and repair center for X-Force and this is just because we know what we are doing. Our techs can and will build amps on request, but X-Force is the only brand of amplifier that they recommend. These amps basically take no or little work after we receive them to make them perform as advertised. I don't know if you can be an authorized repair center for them or not. Feel free to call them.
Oh, not only will I replace the relay 2 years from now, I will replace it 20 years from now. Unlike some of our competitors that sell these and other amps, we actually do the work and have a full tech staff that is capable of repairing such units. Anyways Game, Dave-Made does make a good product. I like X-Force, you like Dave-Made. No big deal to me. Some guys like Chevy's, I like Fords. All I'm saying is that we can be reached after the initial sell of our units and will stand behind them.

How do you know if it is your power supply or not that is sagging I would
think this is what is happening unless you have a super long run of 4 guage
. because 4 guage should carry 70 amps without breaking a sweat, unless you
run your amp with the deadkey all the way up, when you key up you should
only be drawing maybe 1/2 of the 70 amps the 70 ampsat full output ...

did ya look for a moonraker website ?
see where thier authorised dealers are ?
try www.jogunn.com they have some good beams and a list of dealers

and for christs sake , try a friggan search engine

Nick,

It will be in under 10 days. They ship within 72 hours (Working days) and will provide a tracking number. I ordered late evening September 27th and had my radio October 5th via UPS ground from Texas to Georgia. The Weekend order added the delay. I found them peasant to work with and willing to answer questions before and after the sale. I ordered a Turbo Tuned Superstar 4900B Base, and it is quite a radio...

My buddy Irv wanted an awesome radio so he stopped by the Radio Dude's shop and asked for the most awesome distance talker he had, so Dude showed him out back with 4 power levels and admonished him never to use the fourth switch since he didn't think the coax could handle the power.

Well Irv got the radio home and put it in place and hooked up to the antenna. On the first try, he ran the Bowl nationwide with no problems, on the second switch he could DX Europe and run over Mexican Taxis like they were nothing, on the Third Level he was working Asia with no problem. Well he noticed that coax got warm on #3 and decided to switch to the 1 inch hardline. Irv, not watching the meters switched to #4 and with a mighty roar and smoke he was running and crying, Oh Jesus what have I done? And the radio crackled, "You got'em good buddy, come on back!"

Not a chance. An "authorized" list would be much weaker. As I said,
it is highly unlikely that any of the existing "not authorized" radios
would ever be "authorized," so there is little chance of error in such a
list. An "authorized" list, on the other hand, would leave the person
with an entirely new radio (no yet on the list) in a very bad possible position.

> If it does not contain 100% of those
> eligible for inclusion it fails.

Why? There is only one person, with one radio, in that court room.
If that one radio is on the list of "not authorized" radios, what does
it matter that some other radio is not on the list? In other words,
there is no need for 100% inclusion.

I'm sure the FCC is fully aware of the "not authorized" radios commonly used in the citizens band. If they're not, all they have to do is search around the web for a few moments to get the names of the latest models. Heck, they can even pick up one, or two, on eBay to run through some tests.

> If a radio is authorized, that's because
> the FCC authorized it, and therefore,
> they will have 100% of that list. It
> takes a mental midgit to think contrary
> to this.

As I have said before, this would leave the person with a brand new radio, not yet on the "authorized" list, in a possibly bad position.

A "not authorized" list, on the other hand, would include all of the commonly used "not authorized" radios (which are not likely to ever be "authorized"), so there would be little room for doubt if that officer discovered a radio that is on that list.

Remember, there is no need for 100% enforcement. In other words, nobody is hurt if a "not authorized" radio doesn't make it onto a "not authorized" list for a couple of months. But there is a need for 100% protection of the innocent, so we certainly don't want a situation where a person with a brand new, "authorized," radio is harassed because that radio is not yet on a list of "authorized" radios.

See, not such a "mental midget" after all. Of course, why didn't you think of that?

> that day. [snip]

Lets not compare this to the gun issue, Old. Because these "not authorized" radios were never legal to use (or sell) in the first place, there is little real similarity between the two issues.

In other words, to take the exact wording of your example above, if an Model XYZ Shutzeniron [radio] was on the list the mfgr promptly renamed it the model ABC and continued distributing them legally. But, of course, this could not happen because the radio would still be illegal even after the name change (neither the ZYZ or ABC radio is "authorized").

[The FCC] responded by adding the ABC to the list on a particular day, but what about XYZs that'd been sold b4 the list came out and now ABCs sold b4 that day? Again, all of the radios would be illegal to use since none of them have ever been "authorized" to use in the citizens band.

Again, this is not at all like the gun issue.

> Then there was the "features" list:

I'm not advocating a feature list for use under this legislation, and neither is the FCC. However, to some extent, a feature list already exists (under the existing FCC rules). But, the legislation does not extend authority to locals to define "non-authorized" radio equipment - that job remains entirely with the FCC.

> worded law.

Okay, I've addressed this before, but, since its been a while, I'm willing to repeat it again.

The only authorized use of any frequencies between 24 MHz and 35 MHz by an unlicensed operator are those frequencies within the citizens band. Therefore, for the unlicensed operator, the only authority to operate any radio, on any of those frequencies, is as a CB radio operator. It is those facts that define any unlicensed person, using frequencies in or around the citizens band, as a citizens band operator subject to enforcement under this legislation.

In other words, the fact that the citizens band radio operator chooses to use frequencies outside the citizens band, instead of the only frequencies he is authorized to use as an unlicensed operator (the CB frequencies), does not change the operator's status as a citizens band radio operator. He is simply a citizens band radio operator using frequencies he is not authorized to use.

And these facts do not change simply because the citizens band radio operator chooses to call himself a "freebander."

The legislation does not extend authority to enforce the rules of any licensed radio service, including the Amateur Radio Service. That fact is specifically mentioned in the legislation.

Citizens band radio operators who "freeband" are covered in this
legislation. Rather than repeating the reasons, see my earlier message,
in reponse to a message by you, that describes why this statement is true.

Sounds like you found the remedial channel in your area. Whatever your approach, you can catch more flies with honey than vinegar.

723. Best Mobile Radio?

Newsgroup: rec.radio.cb
Date: 2000-10-06 00:00:00 UTC
From: Nick Marsh <nickwb4sqi@wwd.net>
Message-ID: <39DE6CDC.B932D24F@wwd.net>
Source record: 54633

What do all the experts recommend for a mobile CB that will be extremely selective, provide top notch adjacent channel rejection, still have good sensitivity and good clean transmit audio on AM.

I saw an advertisement that one of the Midland mobiles had 70db of adjacent channel rejection. IS this typical of most offshore manufactured radios or better than most?

Are any of the 10 meter radios better in this area than the current line of CB's?

How does the CObra 29 ST stack up in selectivity and rejection?

Thanks

Nick

724. Mobile amp for sale (2 pills)

Newsgroup: rec.radio.cb
Date: 2000-10-06 00:16:06 UTC
From: Toscano <toscano2@ix.netcom.com>
Message-ID: <8riv5p$u33$1@slb6.atl.mindspring.net>
Source record: 54492

Remember, this is sold for licensed amateur radio use only and it is not intended for use in the CB band.

Messenger 250 (it is actually a 175 but had a PROFESSIONAL pill swap done-- I purchased it about a year ago from someone on this group) with lo/med/hi power levels, preamp, one-side heat sink. Amp looks good and works perfectly...put it on the bench last week at a professional shop and it is great. Less than 15 minutes use since I had the preamp replaced (again by a pro shop) and this baby is great. Asking price is US$100 including insured priority shipping anywhere in the continental USA.

I bet you are happy with it it is a direct copy of a davemade. If you went to www.davemade.com and emailed them I guarantee you would get a amp within a week... To Quote the web page " All X-Force Amplifiers are custom built on demand. Delivery takes on average 3 to 4 weeks from the time you place the order till it arrives at your door"

> .Also my X-force does what the specs say!!!!
==========
And so do the davemade 2x4's they are $100 bucks cheaper and more watts they see about 500-600 rms and 1400+ peak at 14 volts .. If you would have gotten a 1x4 instead of the 2x4 you would probably saved a few bucks as well and seen about the same watts in your installation

>Also lifetime waranty on
> everything except the transistors does dave offer that?
==========
Yes dave was the first to offer a warranty on the internet .. and it is a lifetime labor warranty that x force has not a lifetime warranty on the parts. Anyone would know that the transistors are normaly 99% what blows in the amp so you have to pay his price on them to have it fixed and when that happens you will burn a few resistors in the process nothing else in the amp should ever need replacing unless serious abuse has taken place and that would have to be physical abuse at that You need to read the fine print exportsrus used to post the warranty but has gotten into some hot water with a few customers ...

Also why does dave not
> answer your e-mail?I sent him e-mail 3 times in the last 3 months no
answer
==========
dave has nothing to do with any web pages so you never e-mailed him.. just the same as xforce who doesnt have there own page either

dave isn't building any amps anymore and hastn't for a long time and
from what i understand he could care less about it all, so be it, so who
the hell is building his amps over there anyway and where the hell are
they being built????????, and i promise you, you will not
get a amp from them unless you wait a long time and that is
the bottom line,.....cd is out.....

>every six months or so.

There is a provision in the Commission's rules for type
acceptance and generation of lists of type accepted equipment.
There is no reciprocal provision for designating equipment as
"not authorized by the Commission". The Rules speak to using
equipment which has been authorized, not the opposite,

Change your concept of checking a "not authorized" list to
checking an "authorized" list and I might agree with you,
bwcause that's what the FCC does.

> Huh? A SuperStar 3900 is an non-authorized radio.

> Likewise, a Galaxy 88 is an non-authorized radio.

> And, a Uniden HR-2510 is an non-authorized radio.

> None of these radios are ever going to authorized by the commission to
>be used in the citizens band.

And what if the manufacturer was to either bring the existing
design into compliance or produce a new compliant radio with
the same model designatuion? It happens quite often in other
areas of FCC equipment authorization.

> And the same thing could be said for a long list of other
>non-authorized radio equipment commonly used in the citizens band.

Commonly used today in your (limited) experience. Not good
enough for equipment authorization enforcement. When we were
doing a joint program with US Customs of screening import
paperwork and physical checks of radio and computer equipment

shipments imported into the US in the early 90s, on a regular basis we ran across brand and model names which we never heard of before.

> In other words, there is no vagueness in a list of commonly
> used radio equipment that is "not authorized by the commission."

If it does not contain 100% of those eligible for inclusion it fails.

Stick to using a list of certified equipment which has much more credibility and which is available online and is automatically updated when a particular model is type-accepted.

you know and i know that so-called life time warranty is bullshit. i
mean i have ears and i can read. do you know how many times i have heard
people bitching about getting someone to service their amps , and honor
this 'life time' warranty. really, tell me some more lies pal,.......cd
is out......

Packrat,
It may be adequate, but bigger never hurts. Try it, if
the wire is warm at all, it's too small.

I have one of each sitting right next to me, both are decent amps and the noname is not a Davemade copy...for those who want to know. In my truck I think the Dave made is a little hotter, not much. I have not checked them on anything other than watt-meters both were repairs due to a bad antenna system, I simply replace the transistors and resistors that were bad, the amps both performed fine after that. Just my 2 pennies.

And do you really think that anyone, and I mean anyone, is going to believe your story that you went through all that effort to hook up that RCI-2950 in your car, complete with antenna and microphone, just so you could listen? Man, I'd love to be there when you tell that nonsense to the judge. LOL

Boy, this really is a novel defense, applicable to a wide range of other circumstances. For example, "Gee, your honor, yes I had the gun pointed at the bank teller's head, but I wasn't really going to use it - I was just looking at how smooth the barrel was.

Hey cd I do understand what u r saying They galaxy radios are only good for am use only.I owned 2 77's 1 88 and a 99 and 3 33's and the ones with ssb sucked on ssb.Although am was awesome on them things.I like and choose the ranger over a galaxy for one reason and that is cause they are ok on am and the ssb is great.I like to talk on both modes.I also like to do cw on upper channels.Here is my conclusion the ranger is the best all around radio and the galaxy is the best am mobile later Mike

Loren,
Try a parts house first, then try 'Leece-Nevill'(sp) on
the internet. That'll get you started...

well cuz, i don't know where you are getting your info, but old cd
keeps his nose to the wind and his ear to the tracks, and these are the

things i hear. it a known fact that all of davemade's ac boxes are farmed out to other builders now, and the quality has suffered as a result. you talk about afro engineering. they are living on borrowed time and a borrowed reputation. and that is too bad, but those are the facts. i mean who the hell is building for them anymore. how old are you game anyways? and where do you live pal? the tennessee walker boxes are shit too if you ask me ,but they are better built than your namesake, and besides why should anyone pay those guys all that money to build a ac box when you can do it yourself, hmmmmmmm??????,.......cd is out....

Source record: 54702

Greetings!

As you probably know from the other posts - the Wilson shows a DC short, it's normal and it works like it does due to the fact that RF flows from the center, to shield, thru one side of the coil.

If you've ever investigated the spark plug system on a vehicle or any motorized item using electronic ignition - you'll see that the concept is similar to what is known as an Autotransformer.

The winding is one long coil - with a tap, one side goes to ground, the other side to the device, and the tap to provide the trigger and low voltage - high current, control source.

Changing the location of the tap, affects the amount of current and voltage present at both ends of the coil.

Place a heavy current at a small voltage into the tap placed near one end of the coil, [the side that goes to ground] the coil tries to oppose the change and develops an opposite effect against it, a strong and intense magnetic field is produced for an instant. But then remains steady, if the power is removed, the field collapses. A pulse of higher voltage is formed at the opposite end of the coil each time power is applied or removed.

It's this effect that makes the small 1-turn coil at the tap across the turn to ground appear as a "load" - even though it appears as a dead short when checked with a DC VOM. At RF it appears as a given level of impedance - allowing RF to work the load.

The center radiator [whip] is simply a radiating part of the resonate tank circuit that is formed. The field that is generated from the tap coil combo is radiated into the air.

The same thing is occuring with your other antenna, only the elements are isolated at DC voltages, but when RF is applied, current and voltage flow between the wires, forming a field, and this field is what radiates the RF away from the antenna.

On Tue, 03 Oct 2000 18:16:51 GMT, while the modem was pondering it's navel, Cowboy <cowboy_krs21208@my-deja.com> dissertated the following:

>This might be a stupid question, but hey, that's how we learn.
>
>I have two different mag mount antennas (one a Wilson 1000). If I
>check the continuity between the center post and the 'nut' (on just the

Just like i said before...it is the same as pepsi and coca cola..same shit.
some like pepsi better some like coke. seems to me from readin posts on here
that x-force is much easier to deal with than davemade when it comes to
problems. Look at Bill Eitner way back...he had a problem with a box and was
really upset so the president of x-force himself called bill and took care of
the problem for him. I think that is pretty damn good business if you ask me
and most of you out there would have to agree on that point. I dont think there
is anything worng with daves boxes at all. I have an M200 and the frickin thing
screams. I also have however 3 x-force boxes and they are just awesome.

A man walks into a drug store with his 8-year old son. They happen to walk by the condom display, and the boy asks, "What are these, Dad?". To which the man matter-of-factly replies, "Those are called condoms, son. Men use them to have safe sex."
"Oh I see.", replied the boys pensively. "Yes, I've heard of that in health class at school." He looks over the display and picks up a package of 3 and asks, "Why are there 3 in this package." The dad replies, "Those are for high-school boys. One for Friday, one for Saturday and one for Sunday." "Cool!" says the boy. He notices a 6-pack and asks "Then who are these for?". "Those are for college men." the dad answers, "TWO for Friday, TWO for Saturday, and TWO for Sunday." "WOW!" exclaimed the boy; "Then who uses THESE?" He asks, picking up a 12-pack. With a sigh, the dad replied, "Those are for married men. One for January, one for February, one for...".

A little guy goes into an elevator, looks up and sees this HUGE guy standing next to him. The big guy sees the little guy staring at him, looks down and says, " 7 feet tall, 350 pounds, 20 inch penis, 3 pound left testicle, 3 pound right testicle, Turner Brown."

The little guy faints dead away, and falls to the elevator floor.

The big dude kneels down, and brings him to by slapping his face and shaking him. When the little guy finally comes around, the big guy asks him, "What's wrong with you?" In a weak voice, the little guy says, "Excuse me, but what EXACTLY did you say to me?" The big dude said, "I saw the curious look on your face, and figured I'd just give you the answers to the questions everyone always asks me.

I'm 7 feet tall, I weigh 350 pounds, I have a 20 inch penis, my left testicle weighs 3 pounds, my right testicle weighs 3 pounds and my name is Turner Brown." The small guy says, "Thank God! I
thought you said "Turn Around!"

Looking for Jay in the Great Mohave.
This is Steve at NightOwl Radio,
I need a few more of the Mastodon 5000 CB base antennas
I lost my order forms and paper work from the last order .
Please contact me as soon as you see this.
The Antennas work so well that one of my customers begged me to sell my
demo now I am back on the antron and there is just NO comparing of the two.
I do believe I have been spoiled by this new antenna.
If you can ship me afew more I need one for myself and have two more
already sold. Call me and advise me of thier shipping date
Looking forward to hearing from you soon
Steve B.

<< < Written by an African Shakespeare

Dear white fella,
Couple things you should know
When I born, I black
When I grow up, I black
When I go in sun, I black
When I cold, I black
When I scared, I black
When I sick, I black
And when I die, I still black.
You white fella,
When you born, you pink
When you grow up, you white
When you go in sun, you red
When you cold, you blue
When you scared, you yellow
When you sick, you green.
And when you die, you grey.
And you have the balls to call me colored?

WRONG. There is no regulation that says that amateur radio equipment can't be
modified. See the discussion on TRANSVERTERS.

Regarding 11m [use from amateur equipment], there are regulations [for 11m]
regarding excess power, type acceptance, etc....

Definently WRONG. Considering that a new [CB] radio cannot be sold until it
has received its type-acceptance, there's no way that it could be out on the
market before it's on the list.

Now, it is possible that LEO's will have an OLD list - but then they're not
doing their job at that point..... It will be their responsibility to obtain
the updated list whenever it's changed....

Once again, what list of "not authorized" radios? The list that the FCC has is
of "authorized" radios.

And as I have replied to in another post, such is not possible. A CB radio
must be type-accepted (and therefore placed on the "authorized" list) before it
may be sold to the public.

> A "not authorized" list, on the other hand, would include all of the

Because you have proven yourself to be one with this "not authorized" list BS.

The FCC does not have such a list. Any radio which is not on the "authorized"
list is not authorized for the CB radio service.

What part of this didn't you understand? My example, which you quoted, did not involve the use of CB radio service equipment, but instead involved the use of amateur radio equipment by a non-amateur licensee. That isn't "use within the CB (class D) radio service" and therefore, falls outside the scope of authority granted in the bill.

> And these facts do not change simply because the citizens band radio
> operator chooses to call himself a "freebander."

Well, he's certainly not going to be a "CB'er" if he's not using CB equipment to operate in the 27.5-28.0 segment.

His point was: Try telling that to a cop who sees a "CB" taken out of [the CB]
band.

OK, but if they're NOT operating a CB radio, then they're not CB operators.

But as I have said, just how is the FCC supposed to create its list of "not authorized" radios for local LEO use? Although the FCC might be aware of the "more popular" radios from other services that can be modified and therefore used on CB frequencies, there's no way that an exhaustive list can ever be created. How do they stop homebrewing, especially when such is necessary by the manufacturers to produce a new radio line, or by amateurs who are specifically permitted to do so? No "homebrewed" radio will ever be on their "not authorized" list. Are you going to suggest that they have to list my 2m radio on their "not authorized for CB" list?

I'm really into CBs. And in my truck I have a Uniden Base Station, with a Palomar 225. I know they're illegal to have (the linear). If I get pulled over by a police officer, and he sees the base, and Amp.. could i get fined, or could he take it all away from me?? The reason I have my base station in my truck is, because lighting hit my base antenna, and until i get a new one, i put my radio in my truck. It's the only way i can really get out. any information would be helpful thanks.

Who said search? Plain sight. If it can be seen from outside an open
window, it is called a plain sight search, perfectly legal, and just as
binding.
Ever get pulled over at night? Officer freindly will walk to your car,
shining a flashlight in every window until he gets to the drivers side
window. If he sees anything on that walk up, it is a valid search.

>the cop gonna care?

Is the case going to fail? You betcha. No transmissions, no
case. A competent DA would not even take it to court. A
competent department would not let a cop do that sort of
"enforcement". A competent cop would not waste his/her time on
such minor stuff when real problems need attention.

Is the cop/department going to be sued? Find my ad in the
Yellow Pages..... <ggg>

Let's face it ... all this started because Sen. Feingold and
his constituent could not make the FCC junp to their call.

I'm willing to bet that the problem was audio rectification or
front-end tuner overload (both of which can and uften does result
with a 4-watt transmitter and a decent beam antenna) and the
FCC sent them all the info about curing the problemm, said cure
not requiring FCC on-scene presence.

>>Who said search? Plain sight. If it can be seen from outside an open window, it is called a plain sight search, perfectly legal, and just as binding.Ever get pulled over at night? Officer freindly will walk to your car, shining a flashlight in every window until he gets to the drivers side window. If he sees anything on that walk up, it is a valid search.<<

whats in plain sight thats illegal ? . Owning a 10 meter radio is not illegal . owning a RF amp is not illegal . how can him seeing something thats legal to own warrent a search ?

this law would let the law inforcement agengies inforce current fcc codes . and the fcc has no jurisdiction over what you can own . they have jurisdiction over what you are transmitting with .

Heck, my Elmer had an ELDICO SSB-100F transmitter with
a 26.9-27.4 Megacycle selection on the front panel.
I think the Heath DX-100 had a 11m position.

What's your point?
What about a 5 pill radio? Ever seen a radio that will do 1000 bird? It is a novelty but it is real, not real clean but real. I bet your 2 pill radio is a TRIP to see on an oscilloscope.

The word " is a "colored" is bullshit. I would rather hear my kids cuss then say that word. I like the way you post ICE. Now I am a pecker-wood, green eyed, pale skinned and crazy, but I do have a colorful heart and don't give a damn what people think of me or my anti-racist beliefs!!!!
Catch ya later ICE, I still don't know your race, nor do I care peace my brother.....I'll see ya.

The FCC can make such a list in a few hours that would cover 95% of the non-authorized radios commonly used in the citizens band today. A list of authorized radios would be many pages long, since it would have to include every radio authorized for sale since the late 50's (any of them might still be in use).

What part of my explination didn't you understand? It doesn't matter what type of radio the person it using. If he is an unlicensed operator, operating ANY radio on ANY frequency between 24 to 35MHz, that person is still defined as a CB operator for the purposes of this legislation. Read my explination in the message you replied to for the reasons this statement is true.

803. Here's something you need to see.

Newsgroup: rec.radio.cb
Date: 2000-10-07 00:00:00 UTC
From: waynelogan@my-deja.com
Message-ID: <8rm86h$fp1$1@nnrp1.deja.com>
Source record: 54759
Body handling: HTML body converted to readable text

CHECK THIS OUT!!

READ FOR YOURSELF.
DECIDE IF YOU WOULD LIKE TO MAKE EXTRA CASH!!
JUST A LITTLE BIT OF YOUR TIME AND $6.00 IS ALL IT TAKES

HOW TO TURN $6.00 into $6,000 READING THIS COULD CHANGE YOUR
LIFE! IT REALLY DOES WORK!

I found this on a bulletin board and decided to try it. A little while
back, I was browsing
through newsgroups,just like you are now,and came across an article
similar to this that
said you could make thousands of dollars within weeks with only an
initial investment of
$6.00! So I thought, "Yeah right, this must be a scam", but like most
of us, I was curious,
so I kept reading. Anyway, it said that you send $1.00 to each of the 6
names and address
stated in the article. You then place your own name and address in the
bottom of the list
at #6, and post the article in at least 200 newsgroups. (There are
thousands) No catch,
that was it. So after thinking it over, and talking to a few people
first, I thought about trying it.
I figured: "what have I got to lose except 6 stamps and $6.00, right?"
Then I invested the
measly $6.00. Well GUESS WHAT!?... within 7 days, I started getting
money in the mail!
I was shocked!
I figured it would end soon, but the money just kept coming in. In my
first week, I made
about $25.00. By the end of the second week I had made a total of over
$1,000.00!
In the third week I had over $10,000.00 and it's still growing. This is
now my fourth week and I
have made a total of just over $42,000.00 and it's still coming in
rapidly.
It's certainly worth $6.00, and 6 stamps, I have spent more than that
on the lottery!!
Let me tell you how this works and most importantly, WHY it works...
Also, make sure you
print a copy of this article NOW, so you can get the information off of
it as you need it.

I promise you that if you follow the directions exactly, that you will start making more money
Than you thought possible by doing something so easy!
Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple
directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00
IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is 99% no risk - it really works!
If all of the following instructions are adhered to, you will receive extraordinary dividends.
PLEASE NOTE:
Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days.
This program remains successful because of the honesty and integrity of the participants. Please
continue its success by carefully adhering to the instructions. You will now become part of the
Mail Order business. In this business your product is not solid and tangible, it's a service. You are in
the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for
quality lists. However, the money made from the mailing lists is secondary to the income which is
made from people like you and me asking to be included in that list.

Here are the 4 easy steps to success:
STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper
"PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills or Canadian Loonie and
place ONE inside EACH of the 6 pieces of paper so the bill or coin will not be seen through the envelope
Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes,
each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill or coin.What
you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service
and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of
it all. So I checked it out with the Post Office (1-800-725-2161) and they confirmed that it is indeed legal.

Mail the 6 envelopes to the following addresses:

#1) J. Morrison
276 Blendon Rd
West Jefferson, OH 43162

#2) R. Keller
5526 Providence Frg.
Rockford, IL 61114

#3) S. WOOD
9648 WINTER GARDENS BLVD.
APT.#3
LAKESIDE, CA 92040

#4) T. Leach
133 Privett Ct
Roseville, CA 95747

#5) D. McBee
902 Park Lake Rd
Rossville,Ga 30741

#6) R. Guffey
321 Pineridge Rd.
Chattanooga, TN 37405

STEP 2: Now take the #1 name off the list that you see above, move the other names up
(6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post
your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200,
but remember, the more you post, the more money you make! You won't get very much unless you post like crazy.
This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws.
Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants
and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue
and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep
the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to
wrap the $1 bill or coin in dark paper to reduce the risk of mail theft.)So, as each post is downloaded and the
directions carefully followed, six members will be reimbursed for their participation as a List Developer with $1.00 each.
Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving
thousands of dollars in CASH!!! What an opportunity for only $6.00

($1.00 for each of the first six people listed above)
Send it now, add your own name to the list and you're in business!

---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS----------
Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.

Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list.

Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.

Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites,discussions.)

Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup.

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!
BUT YOU HAVE TO POST A MINIMUM OF 200**

That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00!
OK, now here is the fun part, each of those 625 persons post a MINIMUM

200 letters with my name at #2 and they
each only receive 5 replies, that justmade me $3,125.00!!! Those 3,125
persons will all deliver this message
to 200 newsgroups with my name at #1 and if still 5 persons per 200
newsgroups react I will receive $15,625,00!
With an original investment of only $6.00! AMAZING!

When your name is no longer on thelist, you just take the latest
posting in the newsgroups, and send out another $6.00
to names on the list, putting your name at number 6 again. And start
posting again. The thing to remember is: do you
realize that thousands of people all over the world are joining the
internet and reading these articles everyday?,
JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really
works?? I think so... People have said,
"what if the plan is played out and no one sends you the money? So
what! What are the chances of that happening
when there are tons of new honest users and new honest people who are
joining the internet and newsgroups everyday
and are willing to give it a try? Estimates are at 20,000 to 50,000 new
users, every day, with thousands of those joining
the actual internet.

Remember, play FAIRLY and HONESTLY and this will really work!

------=_NextPart_000_0412_01C023BE.41827140

charset="Windows-1252"

CHECK THIS=20
OUT!!

READ FOR =
YOURSELF.

DECIDE IF YOU
= WOULD LIKE TO=20
MAKE EXTRA CASH!!

JUST A =
LITTLE BIT OF YOUR=20
TIME AND $6.00 IS ALL IT TAKES

HOW TO TURN $6.00 into $6,000 READING THIS =
COULD CHANGE=20
YOUR LIFE!

IT REALLY
DOES=20 WORK!

I found this
= on a bulletin=20
board and decided to try it. A little while back, I was=20
browsing

through=20
newsgroups,just like
you = are now,and=20
came across an article similar to this that

said you =
could make=20
thousands of dollars =
within weeks=20
with only an initial investment of

$6.00! So
I = thought,=20
"Yeah right, this must be a scam", but like most of us, I was curious,

so I kept
= reading.=20
Anyway, it saidthat you send $1.00 to each of the 6 names =
and address

stated in the =
article. You then=20
place your own name and address in the bottom of the =
list

at #6,=20
and post the =
article in at=20
least 200 newsgroups. (There are thousands) No =
catch,

that was it. So
= after thinking=20
it over, and talking to a few people first, I thought about trying=20
it.

I figured: "what
= have I got to=20
lose except 6 stamps and $6.00, right?" Then I invested =
the

measly $6.00. =
Well GUESS=20
WHAT!?... within 7 days, I started getting money in the=20
mail!

I was=20 shocked!

I figured it =
would end soon,=20
but the money just kept coming in. In my first week, I =
made

about $25.00. By
= the end of the=20

second week I had made a total of over $1,000.00!

In the third
week = I had over=20
$10,000.00 and it's still growing. This is now my fourth week and =
I
have made=20
a total of just over $42,000.00 and it's still coming in=20
rapidly.

It's certainly =
worth $6.00, and=20
6 stamps, I have spent more than that on the lottery!! =

Let me tell you
= how this works=20
and most importantly, WHY it works... Also, make sure =
you

print a=20
copy of this article NOW, so you can get the information off of it as =
you need=20
it.
I promise you that if you follow
the =

directions exactly, that you will start making more money=20

than you thought
= possible by=20
doing something so easy!

Suggestion: Read this=20
entire message carefully! (print it out ordownload it.) Follow the=20
simple

directions=20
and watch the money come in! It's easy. It's legal. And, your
investment = is only=20
$6.00

IMPORTANT: This is not a rip-off; it is not indecent; it is not =
illegal; and=20
it is 99% no risk - it really works!
If all of the following =
instructions are=20
adhered to, you will receive extraordinary =
dividends.

PLEASE NOTE:
Please =
follow these=20
directions EXACTLY, and $50,000 or more can be yours in 20 to 60=20

days.

This program =
remains successful=20
because of the honesty and integrity of the participants.=20
Please

continue its =
success by=20
carefully adhering to the instructions. You will now become part of=20
the

Mail Order =
business. In this=20
business your product is not solid and tangible, it's a service. You
are =

in
the business of developing Mailing Lists. Many large corporations
= are=20
happy to pay big bucks for

quality lists. = However,
the=20
money made from the mailing lists is secondary to the income which=20
is

made from=20
people like you and me asking to be included in that
list.

Here are the 4 easy = steps to=20
success:
STEP =
1: Get 6 separate pieces of paper and write the following
= on each=20
piece of paper

"PLEASE PUT ME ON = YOUR MAILING=20
LIST." Now get 6 US $1.00 bills or Canadian Loonie =
and

place ONE inside
= EACH of the 6=20
pieces of paper so the bill or coin will not be seen through the=20
envelope
Next, place one paper in each of the 6 envelopes and seal =
them. You=20
should now have 6 sealed envelopes,

each with a piece = of
paper=20
stating the above phrase, your name and address, and a $1.00 bill or=20

coin.What

you are =
doing is creating=20
a service. THIS IS ABSOLUTELY LEGAL! You are requesting a=20
legitimateservice

and you are = paying
for=20
it! Like most of us I was a little skeptical and a little worried about
= the=20
legal aspects of=20

it all. So I =
checked it out=20
with the Post Office (1-800-725-2161) and they confirmed that it is =
indeed=20
legal.

Mail the 6 envelopes to the following =
addresses:

#1) J.=20
Morrison
276 Blendon Rd
West Jefferson, OH 43162

#2) R.=20
Keller
5526 Providence Frg.
Rockford, IL 61114

#3) S. =
WOOD
9648=20
WINTER GARDENS BLVD.
APT.#3
LAKESIDE, CA 92040

#4) T.=20
Leach

133 Privett=20
Ct
Roseville, CA 95747

#5) D McBee
902 Park Lake =20
Rd
Rossville,GA 30741

#6) R. GUFFEY
321 Pineridge Rd. =

Chattanooga, TN 37405

STEP=20
2: Now take the #1 name off the list that
= you see=20
above, movethe other names up

(6
becomes=20
5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the=20
list.

STEP 3:=20
Change anything you need to, but try to keep this article as close to =
original=20
as possible. Now, post

your amended = article to
at=20
least 200 newsgroups. (I think there are close to 24,000 groups) All
you = need is=20
200,

but remember,
the = more you=20
post, the more money you make! You won't get very much unless you post
= like=20
crazy. :)
This is perfectly legal! If you have any doubts, refer to
= Title 18=20
Sec. 1302 & 1341 of the Postal lottery laws.

Keep a copy of =
these steps for=20
yourself and, whenever you need money, you can use it again, and=20
again.

PLEASE REMEMBER
= that this=20
program remains successful because of the honesty and integrity of=20
the participants

and by their =
carefully adhering=20
to the directions. Look at it this way. If you are of integrity, the =
program=20
will continue

and the=20
money that so many others have received will come your =
way.

NOTE: You may want to retain every name and address
sent = to you,=20

either on a computer or hard copy and keep

the notes people
= send you. This=20
VERIFIES that you are truly providing a service. (Also, it might be a =
good idea=20
to

wrap the $1 bill
= or coin in=20
dark paper to reduce the risk of mail theft.)So, as each post is =
downloaded and=20
the

directions =
carefully followed,=20
six members will be reimbursed for their participation as a List =
Developer with=20
$1.00 each.

Your name will =
move up the list=20
geometrically so that when your name reaches the #1 position you will
be =

receiving

thousands of =
dollars in CASH!!!=20
What an opportunity for only $6.00 ($1.00 for each of the first six =
people=20
listed above)

Send it now, add your own name to the list and
= you're in=20
business!

---DIRECTIONS ----- FOR HOW TO POST TO=20
NEWSGROUPS------------
Step 1) =
You do=20
not need to re-type this entire letter to do your own posting. Simply =
put your=20
cursor at the beginning

of this letter = and drag
your=20
cursor to the bottom of this document, and select 'copy' from the edit
= menu.=20
This will copy

the entire
letter = into the=20

computer's memory.

Step 2) Open a =
blank=20
'notepad' file and place your cursor at the top of the blank page. From
= the=20
'edit' menu select 'paste'.

This will paste a = copy of
the=20
letter into notepad so that you can add your name to the =
list.

Step 3) Save your new notepad file as a .txt =
file. If you=20
want to do your postings in different settings, you'll always =
have
this file=20
to go back to.

Step 4) Use Netscape
= or=20
Internet explorer and try searching for various newsgroups (on-line =
forums,=20
message boards,

chat=20
sites,discussions.)

Step 5) Visit =
these=20
message boards and post this article as a new message by highlighting =
the text=20
of this letter and

selecting paste
= from the edit=20
menu. Fill in the Subject, this will be the header that everyone sees
as = they=20
scroll through

the list of =
postings in a=20
particular group, click the post message button. You're done with your
= first=20
one!

Congratulations...THAT'S IT!=20
All you have to do is jump to different newsgroups and post away, after
= you get=20
the hang

of it, it will =
take about 30=20
seconds for each newsgroup.

**REMEMBER, THE
MORE=20
NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!
=
BUT YOU=20
HAVE TO POST A MINIMUM OF 200**

That's it! You = will
begin=20
receiving money from around the world within days! You may eventually =
want to=20
rent a P.O.Box

due to the large
= amount of mail=20
you will receive. If you wish to stay anonymous, you can invent a name
= to use,=20
as long as
the postman will deliver it. **JUST MAKE SURE ALL THE =
ADDRESSES=20
ARE CORRECT.**

Each of
the = 5 persons who=20
just sent me $1.00 make
= the MINIMUM=20
200 postings, each with my name at #5 and only 5 =

persons respond
= to each of the=20
original 5, that is another $25.00 for me, now those 25 each make 200 =
MINIMUM=20
posts

with my name at
= #4 and only 5=20
replies each, I will bring in an additional $125.00! Now, those 125 =
persons turn=20
around

and post the =
MINIMUM 200 with=20
my name at #3 and only receive 5 replies each, I will make an
additional =

$625.00!
OK, now here is the fun part, each of those 625 persons
post = a=20
MINIMUM 200 letters with my name at #2 and they

each only
receive = 5 replies,=20
that justmade me $3,125.00!!! Those 3,125 persons will all deliver
this=20 message
to 200 newsgroups with my name at #1 and if still 5
persons = per 200=20
newsgroups react I will receive $15,625,00!

With an original
= investment of=20
only $6.00! AMAZING!

When your name
is = no longer on=20
thelist, you just take the latest posting in the newsgroups, and send =
out=20
another $6.00

to names on the
= list, putting=20
your name at number 6 again. And start posting again. The thing to =
remember is:=20
do you
realize that thousands of people all over the world are =
joining the=20
internet and reading these articles everyday?,

JUST LIKE YOU
are = now!! So, can=20
you afford $6.00 and see if it really works?? I think so... People
have=20 said,

"what if the
plan = is played out=20
and no one sends you the money? So what! What are the chances of
that=20 happening

when there
= are tons of=20
new honest users and new honest people who are joining the internet and
newsgroups=20 everyday

and are willing
= to give it a=20
try? Estimates are at 20,000 to 50,000 new users, every day, with =
thousands of=20
those joining

the actual=20
internet.

Remember, = play FAIRLY=20
and HONESTLY and this will really=20
work!

damn that's it I'm never going to buy another thing from you... ford is junk. oh my god I can't believe it, a ford lover. What is this world coming to.

just kidding.

I'm happy with my 2950 from you guys and pretty soon I will probably buy another radio and or an amp or two. Gotta get my altenator rebuilt and move next month, but after that it's time to hook the wife's car up and add a little juice.

Hey Nick! Glad you made your decision. That's some mighty fine
equipment. Should give you many years of good service. In the past
month I have ordered two radios from them and got them pretty quick,
say 5 business days at most. Eighty-eightï¿½s to ya ;-)

Hello Kal4cu: Yeah you see these type of guys from time to time.

One thing we did to silence a few of them was to have a pre-arranged conversation, so that each station was in telephone contact. The QSO would start and we would totally ignore the offending station. Then the end of the conversation, one of us would comment the offending station needs more power or a better antenna. After a few times this worked pretty well.

There was a station called "Master Control" in the San Fernando Valley (Southern California) his handle says it all. He would try to interfere, bleed over, and disrupt everyone's QSO. There where bigger radios out there that just walked over him and laughed at him. This always put a hole in his balloon. Then the big radio stations would tell him he has a terrible hum in his radio, and then ignore him. Life is a two street.

Jay in the Great Mojave Desert.

Perfect probable cause for you...DUI Checkpoint. Your radio is in plain
sight, and if you have, say a RCI 2950, guess what...You are busted. Now,
supposing you have no Ham license, the radio is not modded for CB, and you
use it to listen..>What laws have you broken? None that I know of, yet is

the cop gonna care?

I doubt it.

FYI:
Maco bought the Wilson Electronics CB/Ham beams in 1978.
They made a few changes in material, but the basic antenna and design has remained the same.
If you notice some of the drawings on some of the assembly instructions, they still carry the original dates and signatures.
Barjan bought the Wilson Antenna company in August 1999.
In December 1999, they moved the complete plant to Illinois, and haven't made any changes to the mfg process and the retail prices have remained the same.
Barjan bought Francis in April or May of this year.

I doubt it. <<<

owning a rci 2950 is not illegal , transmiting with one is .
owning an amp is not illegal , transmiting with one is .

and , if they stop you at a dui check point , they can pull you out of the car , ask for your drivers licence and ins card , they cannot automatically search your car .

not only are you people jumping conclusions , your being irrational

get real get a life

My "good reason" is that you have continued to post garbage comments
with no backup. As has been discussed on other newsgroups your survey
results are flawed, particularly when you claim they represent the
opinion of all Australian CBers. And no I do not work for the ACA, nor
do I have any financial reasons to support the legalisation of CTCSS
and data transfer on UHF CB.

> Be real, be intelligent, be constructive and be open minded otherwise

Rather a silly comment, particularly given your "tone"

Finally I have to apologise to other readers of this group who have to
put up with this ridiculous thread. Give it up pus.

Yeah, sometimes the OJs get off. I can't afford that kind of
representation. In the real world, people like me have to pay the piper,
even if it is wrong.

> And the last thing that any law enforcement agency needs is a

If this thing passes, it will have the blessing of the powers that be. I
know people that have "assisted" the police in much more dangerous, AND
complicated matters. You'd be surprised at what REALLY goes on.

> > You need to get out more!!!!!
> > What they are SUPPOSED to do, and what really happens are not
> > always the same.
>
> Which is why local LEOs should not be allowed anywhere near
> radio law enforcement.

If the powers want it, it will happen. If it happens, someone, somewhere
will see that it works to their satisfaction.
We have what appears to be a phantom ordinance in my city.

CB radio communications are banned between certain hours.
This was written up in the paper of a neighboring town, and I have a copy, (I think) somewhere. I cannot find ANYONE that will admit to it's existence, but there was one person messing up a councilman's relative's TV, so this was done. I haven't tried real hard to find out what has happened since, but the offending CBer is out of business.
Just went back, and looked. I have the newspaper article from a web site, that someone put up.

823. Re: X-force XT-400 Amp !!!

Newsgroup: rec.radio.cb
Date: 2000-10-07 00:00:00 UTC
From: "Express Electronics Inc." <exports@exportradios.com>
Message-ID: <QmHD5.115$L_3.5430@nnrp1.sbc.net>
Source record: 54779

Put it this way "GAME". Forget about X-Force and Dave-Made. We seem to be stuck on this. This is what I am saying. If you buy an X-Force from"US", 20 years down the road "WE" will replace the relay for free if it has gone out. If you drop the amp from the Sear's Tower or if you run a 32 pill on a Francis 3', that's a different story. But if we can tell that the amp was not damaged by the owner, we will fix it. This is the whole point that I'm trying to prove. If we sold Dave-Made amps and said that they had a lifetime warranty, we would honor that too. As I mentioned before, I personally like X-Force over Dave-Made. Especially after my X-400 walked over a guy with a M-400. Now I realize that my antenna had a lot to do with it, but it was still awesome to walk over the "town drunk". One of the main reasons that I like X-Force(as I've mentioned before) is because my audio is crystal clear 10ft away or 10 miles away. Anyways, if you want to know more about X-Force, click on the link below or give me a call.

http://www.exportradios.com/amplifiers/xbaseamps.htm

Put it this way "GAME". Forget about X-Force and Dave-Made. We seem to be stuck on this. This is what I am saying. If you buy an X-Force from"US", 20 years down the road "WE" will replace the relay for free if it has gone out. If you drop the amp from the Sear's Tower or if you run a 32 pill on a Francis 3', that's a different story. But if we can tell that the amp was not damaged by the owner, we will fix it. This is the whole point that I'm trying to prove. If we sold Dave-Made amps and said that they had a lifetime warranty, we would honor that too. As I mentioned before, I personally like X-Force over Dave-Made. Especially after my X-400 walked over a guy with a M-400. Now I realize that my antenna had a lot to do with it, but it was still awesome to walk over the "town drunk". One of the main reasons that I like X-Force(as I've mentioned before) is because my audio is crystal clear 10ft away or 10 miles away. Anyways, if you want to know more about X-Force, click on the link below or give me a call.

http://www.exportradios.com/amplifiers/xbaseamps.htm

Read Jay's post, it's a good idea. Another thing you can do is take an old CB, a deep cycle battery, a screw in the back antenna, go about 1/4 - 1/8 mi from his house, tape the mike keyed up, put everything in a trash bag or cover with leaves, and let him enjoy his ears plugged for several days.

I appreciate the flowers. As I mentioned before, I enjoy hearing from
satisfied customers. I agree with you that the 2950 is a good radio.
Nearly everyone that works here uses a 2950 or another style of RCI radio.
Anyways, if I can help you out in any way, just give me a call or e-mail me.

I can tell you right now that this is going to start an argument, but here we go.

I really recommend one of the new RCI Ranger radios. The 2950DX and 6900 series radios have the best signal rejection of all of the radios that we sell. (President George has a nice hi cut filter, also) These radios have been designed to filter out distortion and what I call "adjacent frequency bleedover". The original Rangers had awesome reception, but were designed to where they received everything and I do mean everything. For this reason, RCI has redesigned their new radios to have better rejection with improved reception. If you would like more information on these radios, check out the link below or you can just contact me.

i KNOW ALL ABOUT X FORCE THE rf section is AN EXACT COPY OF DAVEMADE ..
mAYBE YOU DON'T SEEM TO REALIZE THIS ... i have seen Plenty of both of them
I knew the original guy who left daves with his design... to start
xforce..dont act like they are anything more than daves or anything else for
that matter ..

Cd, I am very curious as to who you are doing all this talking too? Can you tell me what your friend knows about there ac boxes has he ever beat one in a keydown.. i have one and have only lost in the finals 1 time , there is 925 wash dc and Mulehead Nj , who run ac1 and consistently beat guys with more tubes and more alternators , 747 KY went to i beleive Memphis and keyed sky with a 2 tube 3000 and was beating sneaky pete who eventualy won the class with a 10,000 before 747 blew his line section off the back of the box ... Cd I think you need to do your own thinking and make your own desicion based upon facts not what you have heard .. tube for tube i will put a dave ac mobile against anything in the country... come on come on ..I am The Game ...

One option, that I'll probably catch hell for, is to step into the world
of Amateur radio. Although the ARS has it's problems, there is more in
the offering.

841. Re: RCI 2970 - TX Problem - Seems to be RF Feedback

Newsgroup: rec.radio.cb
Date: 2000-10-07 00:00:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <39df6593.5348087@news.iserv.net>
Source record: 54797

Greetings!

Ok, I'll take a gander at this...

Yes, it does look like you have an RF feedback problem.

One problem,

The radio, is a Negative Ground only. The coax to the antenna is forced to this ground level at the radio.

Any wire, with any length - with have an inherent resistance over it's length.

If the DC resistance shows low, thats good, but it's not true resistance when RF is being used. At RF frequencies, we are dealing with impedance. RF ground *needs* to be at a low resistive potential [impedance close to, if not at, zero ohms]

Otherwise a ground loop occurs, and RF feedback. Two different ground potenitals, one for DC and one for RF.

Everytime you key up, RF currents are flowing everywhere into anything that can accept it, including the microphone and it's cord.

The coax, it's connection being on the trunk lid, and the other end at the radio, generates this ground loop, and using simple wire shows a dynamite low DC resistance, but it's still pretty high for RF impedance if you're trying to tie the ground of the trunk lid to the same ground that the shell of the vehicle is at where the radio is mounted.

Recommendation...

Get some copper foil - 2 inch wide sheet, and using the trunk lid bolting hardware for the K40, use the shortest length of foil to bolt directly to chassis metal - like the other half of the lid seal, just inside - so you can hit and connect against body panel metal and allow the trunk lid to open and close normally.

Copper foil can be found in hardware stores and even in some garden suppy houses [snail/slug fence to protect sensitive plants].

The copper foil is possibly the closest thing to making RF impedance ground returns at zero ohms - it's a lot better at it than simple wire or braid. Avoid long runs, you're wasting energy doing it.

The concept is to keep the gound loop potentials low. The coax is using itself as a ground return to a greater degree than the vehicles'

own body shell and frame can.

Another recommendation...

[Disclaimer - IMHO - to avoid flames]

A K40 and a 2970 - are not the best at getting along with each other. For one thing, it's base loaded [a no-no when it comes to RF losses] and the trunk lid provides a good point to mount, but it's lousy at RF conduction to get a signal to propagate well. The Power level the 2970 makes, and the inability of the K40 to truly handle the Peak power the radio can produce and still provide a low SWR with little reactance [SWR] changes - make a formidable problem and I'm surprized you haven't lost the load cap located in the K40 bottom load. It's been known to quit at power levels exceeding 50 watts. [It's happened to people that I know locally, it's not fun spending $50-$70 on a setup only to ruin it the first night it's used...]

You may need to relocate the antenna, and/or use another type that keeps RF away from the radio better.

Do you have a rear window defogger? This alone is a completely different ballgame and is a bear to deal with.

If you do have a rear-window defog unit or a windshield wiper back there - relocate the antenna. It may be your only other option.

Hope this helps...

On Wed, 4 Oct 2000 14:38:25 -0400, while the modem was pondering it's navel, "Richard Smith" <rsmith@NOSPAMplaneteer.com> dissertated the following:

It was very nice to see a picture of the PRO-46. Mine has been dropped about 40 times (without a case), and
the numbers are totally worn off the rubber keys. Once it even fell into a bucket of water while it was on.
But this rig keeps working well, although it doesn't look as pristine as the one in your picture does.

I would go for a higher powered push-pull design. You will cause less interference and will be less likely to get caught using it. To my knowledge, the find from the FCC is gonna be the same so you might as well break the law in style! Oh yeah, it's illegal alright!

> I could do a durn good job of it right now.

And I (or any other competent trial attorney) could impeach the testimony of any such person who would "advise" the officer on thw grounds of qualifications alone.....all it takes is an expert witness in the form of a present or former FCC agent who would testify how it 'sposed to be done Been there, done that. There are many fools out there who think that they can duplicate or trump the qualifications of a trained FCC agent.

And the last thing that any law enforcement agency needs is a corps of wannabes "assisting" them. When I was an FCC enforcement supervisor, any agent who, before making an adversary contact, did not get a twinge of apprehension before the "No sweat, I can do this" kicked in was a definite liability.....

> You need to get out more!!!!!

The model number goes on the "authorized" list (maintained on
line, no longer on paper) at the moment the model receives
type-acceptance. If the radio has not yet received t/a, no one
has any business with it except the manufacturer and the
importer who is holding it (under Customs bond as applicable)
until the t/a comes through and the radio can be released into
the marketplace.

From battery, depending on wire size from alt to batt you might want to
upgrade the wire from the battery to the alternator.
Fuse the wire as close to the battery as possible for the wire leading to
the amp. I would use an 80 amp fuse. It will blow in a short but is big
enough to keep voltage drop to a minimum.

> 2) 8 gauge audio quality (High Strand Count) positive lead good
> enough for 12-15 foot run at 45-55 Amp draw from amp ?

I would use at least #6 gauge wire.

> 3) Is 45-55 Amp draw about right for a Texas Star 500V driven with
> a peaked radio swinging to 30 watts?

That amount of current draw seems a little high for AM use.

> 4) Since I must chassis ground amp. for this install, what guage
> wire should I have from the battery to chassis ground?

I would use a #6 from battery to the frame, do not use a seat bolt to ground
the amp, if posiible go to the frame.

Good luck and make sure you have a good SWR.

Good point, the guy running the amp will need to make sure he has enough "ass" to supply the amp before he worries about voltage drop. If the power source can't keep up why bother trying to wire it to keep up.

Without rereading I believe you said it was a narrow tuned amp but had
trimmers and could be adjusted or something to that affect, my bad.

> the marketplace.

Yes, but if the system fails (the locals fail to keep their list updated as often as they should, etc.), I would rather the system fail safe than fail in a way that hurts an innocent person.

A radio listed on a list of unauthorized radios would not likely change its status over a reasonable period of time (a non-authorized radio would likely remain non-authorized), but a list of only authorized radios would need constant, and immediate, updates to include new models if the person who might own that new model is to be covered.

So, in the end, its safer to have a list of unauthorized radios than a list of authorized radios. Wouldn't you agree?

No, it isn't. Think big, really big. Too big never hurts,
but too small will.

>
> 3) Is 45-55 Amp draw about right for a Texas Star 500V driven with
> a peaked radio swinging to 30 watts?

No idea. What's the rated output of the amplifier? Divide
that by the voltage, then multiply by 50%. That'll give you
a 'ball park' figure for current.
>
> 4) Since I must chassis ground amp. for this install, what guage
> wire should I have from the battery to chassis ground?

I'd use a copper strip at least 1" wide.

Source record: 54673

I have a CDE antenna rotator (model CD44), complete with 2 control boxes, and an accessory shelf...The unit is old, but in very good working condition. It will handle a 8.5 sq ft windload without a problem (if installed properly, with a thrust bearing).. Copper/H&Y Electronics sell the Telex CD45II unit new (with one control box), for $350.00 + approx $25-$30 shipping...(without the accessory shelf)...

I am willing to let the whole thing go (the rotator, 2 control boxes, the accessory shelf, and 20' of 8 conductor rotor cable with connectors, to test the unit before installing), for $175.00 .. Buyer pays ALL shipping costs.

Please e-mail if intrested....

After doing alot of looking around I decided the RCI 6900 seemed to be a very good all around radio and I have one on order from Dave at Express Electronics. A very important factor to remember is that your antenna is the most important thing for getting radio performance. Its been stated on this newsgroup many times, a poor radio and a good antenna will signifigantly out perform a good radio and poor antenna. I am going to use a Wilson 5000 with my new radio.

Nick

how did i know that as soon as i said something you, danny boy, you would be right there with a wise ass comment. I would say i'm kinda far from being a shoe shine boy. So go back to your boss and get your own ass to work. Unless you wanted to come to chi-town i'd be glad to put you on my payroll. I could use some cheaper help. Also, even if i do live in chicago, which i do, what does that have to do with x-force making a good box??? Don't blame my city on the fact that the amp kicks some ass. LOL....Take care danny!!!!!

Correct - in part. The first one is indisputable, the second is not.
The survey relies on people a. hearing about the survey, and b.
responding to it. The first I heard of the survey was you using
it's "results" in your posts. I have been around the CB game,
including on the radio and the internet for a rather long time however
have heard no reference. I don't claim to be infallible but when none
of my mates have heard of the survey that you have been discussing. As
such not having known about your survey I was not able to respond to
it. Also how about those people who knew about it and did not respond
to it? On what medium did you distribute the survey? was it over the
net, or via R&C or by mail (to your members only??). I have mates who
hardly ever use the net but are quite active on the radio, there are
also those business users of CB who are to busy working to play around
on the net and thus unable to find out about your survey - until well
after the fact.

>

And as per my comments above, your results will likely have been well
and truly distorted by the method of how the respondents have been
chosen. I very much doubt that the distribution is random, rather
there will almost certainly be inaccuracies built into it - I could
survey only one side of politics which would as a result indicate that
the leader of the country has 100% approval rating - which in reality
is rather unlikely. I suspect that this survey will have similar
inaccuracies within it.

>

See above comments. Also scare tactics by some groups will have had an
impact. The benefits of the proposals are widespread, amd your
arguements are also flawed, CTCSS is already in wide use and I am yet
to hear of a situation where an emergency call was ignored because of
CTCSS being in use.

In answer to the last two comments of yours, I believe I have been open
minded and constructive and not belligerent in regard to my comments,
unfortunately they do not seem to mesh with your concepts and as such
may appear to be belligerent, stupid, close minded or destructive in
nature. I have provided reasons to debunk your comments however they
would have appeared to have been ignored, denied, or neatly side
stepped.

> >

Flattery will normally get you everywhere, however I do seem to detect
the vaguest scent of sarcasm, which after all is the lowest form of
humour. I did actually mean what I posted to the group, in that this
really is a silly thread but unfortunately I find it difficult to
ignore what I believe to be ridiculous or inaccurate comments.

884. Gear for Sale Update 10-8 (00)

Newsgroup: rec.radio.cb
Date: 2000-10-08 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <8rq03l$l5l$1@slb7.atl.mindspring.net>
Source record: 54685

Time to make some room for more new toys and old gear.....

PICs available via Email..

Please include item in email when requesting pics.

BASE RADIOS:

2..... Browning MKIII AM/SSB Receiver and AM transmitter with G-Stand D104 $250.00 Plus shipping In working condition, sounds good on transmit and receive, Some crystals out of tolerance on Transmitter. (I have used Radio Shack single-channel crystals with good results in the past; most rigs of this age have some.out of tolerance crystals due to aging). Some documentation included **** SALE PENDING ****

3..... Browning MKIII AM/SSB Receiver and AM/SSB Transmitter w/banana Mic $250.00 plus shipping Rig is barely working, but repairable. Have extra AM/SSB RX and AM/SSB TX chassis for parts units to go with this pair. Banana mic is complete with original cord and plug (incorrect setscrews on plug), no stand and mic not working (possible bad element). Some documentation included ***** SALE PENDING ****

4..... Two Cherokee CBS-1000 one original box and no mics $150.00 plus shipping for pair inop/repairable - I have seen both of these rigs talk at various times. Each time further repair was attempted, much further repair was needed. They have lost their charm..... .PDF File included with service information (Will trade both for good AH-100 Handheld with accessories)

6..... Cherokee CBS-500 w/Aires (Sadelta) Hand Mic *** SOLD***

7..... Johnson 250 50th Anniversary / mic $50.00 plus shipping In working condition with stock hand mic.

8..... Lafayette Comstat 25B $45.00 Plus shipping Working but not collector quality. Good for parts unit to restore another rig

10.... Robyn T-123B $50.00 plus shipping Working, no apparent mods. Good for adding to the collection, but has signs of wear on front and paint chips on cabinet where bracket was mounted. Do not have tilt mount base stand that was an original accessory for this radio. A nice one, but not a great one.

11.... Two (2) Tram D201 $200.00 plus shipping for the pair One complete (minus relay) and I have had it working to some degree in the past but would consider it to be inop for the purpose of this description. Second rig missing receive VFO and SSB indicator lamp, Audio and final tubes. Were purchased represented as complete and repairable... I will list them as almost enough to make one good working unit. Complete unit has

Silver ID Tag with Yellow Diamond containing the "T" of Tram. Other unit has Black ID Plate with Tram in Silver and D201 in orange. Use for parts, repair or restore..... Note: It has been determined that neither are "Rats Nest" versions of the D201. Thanks for all who provided info. Pics available via email. **** SALE PENDING ****

MOBILE RADIOS:

13..... Two (2) Palomar Digicom 100 $150.00 plus shipping for pair These are Mobile rigs with dual channel selectors, made for Palomar by CPI. AM/SSB. Have service info with interesting possibilities. Rigs are complete - No parts robbed.. Considered to be usable for parts or repair. No mics included, Will include SAMs Photofact (not copy).

14..... Two (2) Midland 13-857 w/ stock hand mics $40.00 plus shipping for pair. Were working when packed away. Crystal rigs, not the later "B" model with PLL02A. Usable for parts or repair; may still work, but 23 channel and not to be sold for on-air use.

MICROPHONES and ACCESSORIES:

Demco Modulator $50.00 plus shipping Working.... 4 pin and 5 pin Mic jacks have been added to front panel, along with a 3 position/center off toggle switch to allow selecting original, large 4 pin mic jack or either of the 2 newer style mic jacks. Add some
Audio to your vintage tube rig.

Pics available via email.
++++++++++++++++++++++++++++++++++

Speculation in NewsGroup is great, but would prefer serious offers via email.

Thanks to all who have already responded. More additions coming.......

> after the fact.

The survey, or discussion or proposal or whatever terminology we should use to describe it appeared back in 96. The distribution of it had nothing to do with ACBRO. It was the ACA who initiated and distributed it, let's call it a discussion paper. The ACA have a list of interested parties (with respect to the CBRS) such as CB clubs, both 27Mhz and UHF, Associations, various businesses and manufacturers of Radios and the list goes on. How they compiled this list I do not know. It was this list that they used to sent the respective interested parties the discussion paper on proposals to ammend the CBRS class licence. If you or your mates were not on that list then you will have to take that issue up with the ACA. For our part (ACBRO) we simply passed on a copy of those proposals to people that were on our list, which once again includes afilliated clubs, members, interested parties etc. Radio and Communications magazine also had a write up about it and of course as we all know that is distributed nationwide in newsagents. There was also media releases, although they way CB radio matters is publicised these days, you may not have noticed it. It was also gazeted in the Government publication. Also, for many months at the time a channel was devoted for discussion on the proposal on the UHF band on a weekly basis, from memory I think it was channel 22. That proposal and discussion papers are all on file as public information from the ACA. Now, if you and your mates didn't hear about it, then what can I say to you, except sorry that it some how missed you all.

My results????? When did I ever say these were my or ACBRO's results? These results were given to us by the ACA. They tabulated the responses and arrived at the results themselves. I would most certainly agree that there may be innaccuries built into such a distribution of this kind. But, I don't beleive the ACA in their method of distribution were loaded the dices so to speak. They worked from a list of names and addresses and so did ACBRO. What else could anyone have done.

Let me ask you, Damn_It. If you have 500,000 people how will you get a majority vote on an issue so that 250,000 plus 1 becomes a majority vote in favour of a situation, that is, short of creating legalislation for compulsory voting? Tell me how you would force 500,000 people to vote so that you have an accurate consensus? (This will be interesting)

Scare tactics? Just telling you like it was. I don't deny that CTCSS
and Telemetry and Telecommands would have benefits, the issue is
whether the UHF 40 channel band is appropriate.

Tell me why you have raised the issue of emergency calls being ignored
because of CTCSS.

open
> minded and constructive and not belligerent in regard to my comments,
> unfortunately they do not seem to mesh with your concepts and as such
> may appear to be belligerent, stupid, close minded or destructive in
> nature.

Though your ideas and mine mesh it provides for a healthy debate, and I
can only re-iterate your words about me to you.

I have provided reasons to debunk your comments however they
> would have appeared to have been ignored, denied, or neatly side
> stepped.

Now this is the classic comment which I wish I had a dollar, for
everytime I have read it in a Newsgroup. It usually indicates that the

person making this comment just won't accept that his arguments have
been answered along with the fact that he/she is having trouble trying
to accept those answers, but that is fine, your entilted to view my
answers in any way you wish.

Do you want to start again from the top? In your next post create three
headings:

These are the things that were ignored,
These are the things that were denied,
These are things that were side-stepped.

Then list the relevant satements under each heading and I will respond
accordingly.

Perhaps if we work it this way you might find things are little easier
to comprehend.

Oh, I have come down this far in the post and realise you have a name,
perhaps you stated it in an earlier post and I didn't notice, sorry.

Well Paul, if we are on a first name basis, now that I know your name,
perhaps this could be the start of a beautiful freindship together.
(Now where have I heard that before.)

Hello Steve: Thanks a million for the flowers.

I have left a message on your phone machine. Starting a production run
of the antennas will reduce the price significantly.

Jay in the Mojave

There is a major difference. Pointing a gun at a teller is intent and
threatening, and legally, it is assault with a deadly weapon. Having a
radio in your car is only a crime if it is stolen.

Florida Man Fined $20,000 in Amateur Radio-related Case
NEWINGTON, CT, Jul 15, 1999--The FCC has levied a $20,000 fine on a Florida man for violations stemming from alleged unlicensed operation on Amateur Radio frequencies. The FCC's Tampa Field Office has sent a Notice of Apparent Liability (NAL) to William Flippo of Jupiter. Flippo is accused of willful operation of an unlicensed radio station on 28.375 MHz, willful and malicious interference with ongoing Amateur Radio communications, and with failing to let FCC representatives inspect his radio equipment. All of the alleged violations are said to have occurred June 8, 1999.

The FCC's Compliance and Information Bureau has been investigating complaints from hams in the Jupiter area for nearly two years. According to the FCC, the hams identified Flippo--a CB operator known as "Rabbit Ears"--as the source of intentional interference to ham communication. One ham in the area says the local amateur community had "for many months" been experiencing deliberate interference problems on 10 meters as well as on a local 2-meter repeater, although the FCC did not cite Flippo for any violations involving 2 meters.

Local hams also provided the Commission with audio tapes and the results of close-in monitoring and direction finding, the FCC said. On the basis of the "evidence at hand," Flippo got an FCC warning last February from the Tampa Field Office, advising him of the allegations and warning that a fine could result.

The following month, Flippo "categorically" denied the allegations in the warning letter, but hams in the Jupiter area said the intentional QRMing ceased for a while.

When renewed complaints from hams arose this spring, an FCC agent traveled to Jupiter to investigate. The agent used direction-finding techniques to determine that intentional interference to amateur traffic "was occurring and that the intentional interference was being transmitted from the residence of William Flippo."

The FCC says the agent monitored and heard taped portions of a 2-meter ham radio net earlier that day being replayed on top of amateur communications on 10 meters " in an attempt to intentionally disrupt and interfere with those communications."

The FCC agent, accompanied by a local sheriff's deputy, attempted to inspect the radio equipment at Flippo's residence on June 8, but Flippo reportedly refused to allow the inspection.

Flippo has 30 days to respond to the FCC Notice, sent July 12 by FCC Tampa District Director Ralph M. Barlow.

Florida Man Arrested for Malicious Interference to Hams, Unlicensed Operation
NEWINGTON, CT, Jul 25, 2000--Federal authorities have arrested a Florida man and charged him with eight counts of interfering with Amateur Radio operations and transmitting without a license. William Flippo of Jupiter was taken into custody July 20.

The arrest is the latest chapter in a lengthening saga involving complaints of flagrant and repeated malicious interference attributed to Flippo.

Flippo, 57, already faces a $20,000 fine levied last summer for unlicensed operation, willful and malicious interference to Amateur Radio communications, and failure to let the FCC inspect his radio equipment. In January, the FCC gave Flippo 30 days to pay and referred the matter to the US Attorney after he failed to do so and the interference complaints continued.

Armed with a search warrant, federal marshals and FCC and FBI agents, accompanied by local authorities, descended on Flippo's residence early last Thursday morning. According to reliable reports, a locksmith opened a gate to Flippo's property, the door to the house was battered down and Flippo was taken into custody. During a subsequent search of the property, the FCC reportedly seized some three dozen items related to the alleged offenses, including radio equipment.

Flippo was released on $100,000 bond, co-signed by his wife. An arraignment on the federal charges is scheduled for July 31. Meanwhile, he's scheduled to appear in state court July 26 in a case where a car owned by a local amateur was alleged to have been rammed.

US Magistrate Judge Ann E. Vitunac has prohibited Flippo from making any radio transmissions and from contacting any witnesses in the case. Neither he nor any of his family members may handle or possess firearms, and Flippo's travel has been restricted to the Southern District of Florida--the court's jurisdictional area.

Hams in Florida say Flippo has continued to thumb his nose at the FCC--even since being fined--and has persisted in flouting the law by interfering with local HF and repeater nets. Personnel from the FCC's Tampa District Office have followed up on complaints from amateurs that Flippo--also known by his CB handle of "Rabbit Ears"--has regularly interfered with hams on 10 meters, 2 meters and elsewhere. The FCC has acknowledged receiving information on several occasions since the fine was levied last July indicating that Flippo continued to violate federal law.

The criminal information that led to his arrest last week cites violations allegedly committed between June 1999 and April of this year. He was charged with four counts of transmitting without a license--each count carrying a maximum penalty of one year in prison and a $10,000 fine--and four counts of interfering with the operations of licensed stations, which carry the same penalty.

Flippo's only response to last year's FCC Notice of Apparent Liability was to send the FCC a copy of a one-page bankruptcy filing. The FCC was not

impressed, however. "In a case where an NAL has been issued and the recipient continues to engage in the same conduct, we are not inclined to adjust the forfeiture amount, even where the recipient has filed for bankruptcy protection," the Commission said.

In federal court, Flippo reportedly claimed indigence, but evidence to the contrary was produced, and he agreed to retain his own attorney.

Flippo reportedly has been causing problems for the amateur community in the Jupiter area for almost three years. FCC personnel visited the Jupiter area at least twice last year as a result of amateur complaints alleging malicious interference from Flippo. The FCC says its direction finding in the past has tracked offending signals to Flippo's residence. An agent monitored and heard taped portions of a 2-meter ham radio net earlier that day being replayed on top of amateur communications on 10 meters, the FCC has said.

In the past, FCC agents have attempted to inspect radio equipment at Flippo's residence, but he reportedly refused to allow the inspection. Flippo also is said to have radio transmitting equipment in his vehicle.

Crying Husband

A woman woke in the middle of the night to find her husband missing from their bed. In the stillness of the house, she could hear a muffled sound downstairs.

She went downstairs and looked all around, finally finding her husband in the basement, crouched in the corner, facing the wall, and sobbing.

"What's wrong with you?" she asked him.

"Remember when your father caught us having sex when you were 16?" he replied. "And remember he said I had two choices: I could either marry you, or spend the next 20 years in prison."

Baffled, she said, "Yes, I remember, so what?"

"I would have been released today."

::grin::

Hope you all get as big a chuckle out of this as I did.

I tond thing...I bought the factory fan kit for the DX-1600 and he told that the fan blows into the amp and he is thinking that it should suck the air out of the amp and not blow into the amp. It does make sense to me to take the he puts out around 500 w peak-to-peak. Adding a sweet sixteen to the system..

Ok he said to get a K-40 rather than a roof mounted wilson of any sort..was leaning on getting the 5000. All the info that I have read about the K-40 is that it is rated at 500 watts!!! The sixteen would fry that in a heart beat!!! Also he stated that Wilson sold out to Barjan, and are now junk, anyone else heard this???

Second thing...I bought the factory fan kit for the DX-1600 and he told that the fan blows into the amp and he is thinking that it should suck the air out of the amp and not blow into the amp. It does make sense to me to take the heat out...why would they design it to to this???

Thanks fer listening to my rambing on here....

How to turn $6000 in $6

CHECK THIS OUT!!

READ FOR YOURSELF.
DECIDE IF YOU WOULD LIKE TO lose CASH!!

HOW TO TURN $6,000.00 into $6. really easy

READING THIS COULD CHANGE YOUR
LIFE! waste your time doing this instead of sitting in front of the
TV or CB

IT REALLY DOES WORK! in just a few weeks you too can turn $6,000.00 into
$6. and be reported to your ISP where you will be the proud winner of a
disconnected Internet connection and the scorn of your fellow newsgroup
readers.

I found this on a trash can and decided to try it. A little while
back, I was browsing through newsgroups,just like you are now,and came
across an article
similar to this that said you could make a few bucks within weeks with only
an
initial investment of $6000.00! So I thought, "Yeah right, this must be a
scam", but like most
of us, I was curious, so I kept reading. Anyway, it said that you send
$1000.00 to each of the 6
names and address stated in the article. You then place your own name and
address in the
bottom of the list at #6, and post the article in at least 200 newsgroups.
(There are
thousands) No catch, that was it. So after thinking it over, and talking to
a few people
first, I thought about trying it. I figured: "what have I got to lose except
6 stamps and $6000.00, right?"
Then I invested the measly $6000.00. Well GUESS WHAT!?... within 7 days, I
started losing
money in the mail!

I was shocked! My $6,000.00 turned into $6 within a few weeks

I figured it would end soon, but the money just kept disappearing. In my
first week, I lost $6000.00. By the end of the second week I had lost a
total of over
$6,000.00! In the third week I had lost $60,000.00 and it's still
disappearing. This is
now my fourth week and I have lost a total of just over $85,000.00 and it's

still disappearing
rapidly.

It's certainly worth $60000.00, and 6 stamps, I have spent more than that on the lottery!!
Let me tell you how this works and most importantly, WHY it works...

Also, make sure you
print a copy of this article NOW, so you can get the information off of it as you need it.
I promise you that if you follow the directions exactly, that you will start losing money
Than you thought possible by doing something so easy!

Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple
directions and watch the money disappear! It's easy. It's illegal. And, your investment is only $60000.00

IMPORTANT: This is a rip-off; it is not decent; it is not legal; and it is 99% no risk - it really works! you really do lose all your money!!!!!!!!!!!!!!!!!

If all of the following instructions are adhered to, you will receive extraordinary dividends. such as disconnection from your ISP and the scorn of your fellow newsgroup readers.
PLEASE NOTE:
Please follow these directions EXACTLY, and $50,000 or more can be lost in 20 to 60 days.
This program remains successful because of the dishonesty and integrity of the participants.
Please continue its success by carefully adhering to the instructions. You will now become part of the
Mail Order business. In this business your product is not solid and tangible, it's a disservice. You are in
the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for
quality lists. However, the money made from the mailing lists is secondary to the income which is
made from people like you and me asking to be included in that list.

Here are the 4 easy steps to success:
STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper
"PLEASe REPORT ME TO THE NEAREST AUTHORITIES." Now get 6 US $1000.00 bills place ONE NEXT TO YOUR COMPUTER SCREEN so the bill or coin will be seen through the SCREEN.

Next, place one paper next to the computer screen and see how stupid you look believing this is going to work You should now have an idiot sitting at their computer thinking they are going to make money with the stupidity of others. What you are doing is creating a idiot. THIS IS ABSOLUTELY ILLEGAL!

You are
requesting a legitimate service
and you are paying for it! Like most of us I was a little skeptical and
a little worried about the legal aspects of
it all. So I checked it out with the Post Office (1-800-725-2161) and
they confirmed that it is indeed illegal.

#1) Jim Morrison
276 Dead End Road
Graveyard, OH 43162

#2) TONY THE TIGER
5526 kellog lane.
Cereal, IL 61114

#3) jolly green giant
ho ho ho lane
Vegetable, AL 36301

#4) Rose Bush
133 Privett Ct
Roseville, CA 95747

#5) Aunt Bee
902 Mayberry Rd
Mayberry rfd

#6) good buddy
321 Key Down Rd.
Hillbilly, TN 37405

STEP 2: Now take the #1 name off the list that you see above, move the
other names up
(6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the
list.

STEP 3: Change anything you need to, but try to keep this article as
close to original as possible. Now, post
your amended article to at least 200 newsgroups. (I think there are
close to 24,000 groups) All you need is 200,
but remember, the more you post, the more money you make! You won't get
very much unless you post like crazy.
This is perfectly illegal! If you have any doubts, refer to Title 18 Sec.
1302 & 1341 of the Postal lottery laws.
Keep a copy of these steps for yourself and, whenever you need money,
you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the
honesty and integrity of the participants
and by their carefully adhering to the directions. Look at it this way.
If you are of integrity, the program will continue
and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep
the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to
wrap the $1000 bill or coin in dark paper to reduce the risk of mail theft.)So, as each post is downloaded and the
directions carefully followed, six members will be reimbursed for their participation as a List Developer with $1000.00 each.
Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving
thousands of dollars in CASH!!! What an opportunity for only $6000.00 ($1000.00 for each of the first six people listed above)
Send it now, add your own name to the list and you're in business!

---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS----------
Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning
of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy
the entire letter into the computer's memory.

Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'.
This will paste a copy of the letter into notepad so that you can add your name to the list.

Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have
this file to go back to.

Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards,
chat sites,discussions.)

Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and
selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through
the list of postings in a particular group, click the post message button. You're done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang
of it, it will take about 30 seconds for each newsgroup.

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!
BUT YOU HAVE TO POST A MINIMUM OF 200**

That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box
due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as
the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE

CORRECT.**

Each of the 5 persons who just sent me $1000.00 make the MINIMUM 200
postings, each with my name at #5 and only 5
persons respond to each of the original 5, that is another $25.00 for
me, now those 25 each make 200 MINIMUM posts
with my name at #4 and only 5 replies each, I will bring in an
additional $125.00! Now, those 125 persons turn around
and post the MINIMUM 200 with my name at #3 and only receive 5 replies
each, I will make an additional $625.00!
OK, now here is the fun part, each of those 625 persons post a MINIMUM
200 letters with my name at #2 and they
each only receive 5 replies, that justmade me $3,125.00!!! Those 3,125
persons will all deliver this message
to 200 newsgroups with my name at #1 and if still 5 persons per 200
newsgroups react I will receive $15,625,00!
With an original investment of only $6.00! AMAZING!

When your name is no longer on thelist, you just take the latest
posting in the newsgroups, and send out another $6000.00
to names on the list, putting your name at number 6 again. And start
posting again. The thing to remember is: do you
realize that thousands of people all over the world are joining the
internet and reading these articles everyday?,
JUST LIKE YOU are now!! So, can you afford $6000.00 and see if it really
works?? I think so... People have said,
"what if the plan is played out and no one sends you the money? So
what! What are the chances of that happening
when there are tons of new honest users and new honest people who are
joining the internet and newsgroups everyday
and are willing to give it a try? Estimates are at 20,000 to 50,000 new
users, every day, with thousands of those joining
the actual internet.

Remember, play FAIRLY and HONESTY and this will really work!

916. Re: CB on aircraft in flight???

Newsgroup: rec.radio.cb
Date: 2000-10-08 00:00:00 UTC
From: jollyrgr@mc.net
Message-ID: <Pine.BSI.4.05L.10010081606440.26907-100000@maxx.mc.net>
Source record: 54817

If the flight is commercial (ie scheduled aircraft carrier) then NO you could not use the CB. If, on the otherhand, you were flying with a friend, relative, etc. you would only need the permission of the pilot(s). If I read correctly (and you typed correctly) the flight of 2500 ft then this sounds like a small single engine Cessna or Piper. If this is the case, simply ask the pilot before hand. (I've taken both my 2m ham and CB walkie talkies up with me while flying. It is quite easy to get permission when I'm the one doing the flying.)

I know it used to be the case but I do not know if it is still possible.
This comes from several airline pilots (that were also hams) independent
of each other. Commercial/international aircraft are equiped with low
band radios that DID NOT have restrictions on where they could be tuned or
where they would transmit. You simply dialed in the frequency and mode
(SB or AM) and talked. The current radios MAY have the CB band restricted
but I do not know for sure.

Well, there are about 4 radios that have that recording. What they will do is if someone is looking for 1 radio, the other will start playing the recording. 2 of them are close to south central Okla City.

Don't believe everything you hear. A K-40 will not handle the power
you want to run and besides, the Wilson 5000 will recieve rings around
a K-40. As for the Barjan merger, they distribute to practicly every
major truck stop in the country. What a better way to sell a product?
I seriously doubt the quality will suffer. As for the fan thing, I
agree with you. The fan should be pulling the hot air "from" the
unit. Good luck and God bless.

The active heat producing parts are bolted to the heat sink. That is
the part that has the fins. I always put a fan blowing air into the
fins. In a large amp, you could put a fan on the cover to cool the
resistors, but you need as much opening for air input as air output.

:Dave!!!!!

Dave:

By that logic, I should be allowed to waltz right into your livingroom
with a 4,000 watt boombox during the superbowl, crank it all the way
up, and you wouldn't be able to touch me, for fear of infringing on my
2nd amendment rights.

"Rabbit Ears" was a CB'er, and was not a HAM. That is plain in the
original post. IF you had actually read the whole thing, you might
have gathered that information.

The point is that the range of frequencies this idiot was broadcasting
was licenced, and restricted to those who have earned the privelige of
transmitting there. Just as driving is a privelige, not a right, so is
transmitting on the HAM bands... It's about a little section in the
constitution nicknamed the Elastic Clause, which states that the
government may make laws which are in the best interest of the
population.

If you're going to quote the constitution, make sure you fully
understand it, first. I think there may be a handful of people in this
country who actually do, and by your posts I gather you are not one of
them.

Just my two cents.

This "air blowing " subject is an interesting one. I have been in the computer business for years and the power supplies always suck the heat out and cpu coolers suck the air up through the fins of the heat sink and blow the heat away from the cpu. Any engineers out there who can explain this?

Riley Hollingsworth's title is 'Special Counsel for Amateur Radio' in the
Enforcement Division.
He may, and probably does, know. He might even care. But only when the
chaos crosses 28.0 MHz is he paid to do anything about it.

Tend to agree in principle. With something like the 4CX series of tubes it gets far more even cooling to pressurize below the tube and force air up the chimney thru the socket and cooling slots. Where the object of the game is to maintain a flow in the general vicinity of a heat sink, it probably doesn't make enough difference to buy lunch.

yeh cuz, but your opinion is jaundiced to say the least , and your
stance on this is predudicial because of the following reasons. you are
from chicago, the home of xforce and you use xforce stuff which is a

well known fact, at least around here, and you are a pretty good shoe shine boy, which means among other things that you talk too much instead of getting your damn work done slick. so thats a fact jack, no doubt about it,.....cd is out...

>WRONG. There is no regulation that says that amateur radio equipment can't be
>modified. See the discussion on TRANSVERTERS.

Additionally, with the single exception of linears for 10 meters,
none of the amateur equipment is TYPE ACCEPTED at all.

>Regarding 11m [use from amateur equipment], there are regulations [for 11m]
>regarding excess power, type acceptance, etc....

And therein is the problem. If a non-ham is in possession
of a ham transciever capable of 100 watts on 11m...just
what is illegal about that? The answer is nothing.
In the first place, the LEO has no idea of what the capabilities
are of any amateur equipment. In the second case, there
MUST be evidence that illegall operation (CB) has been going
on. The mere ownership of an amateur transciever by
a non-ham is not now, nor has it ever been illegal.

I OWNED ham gear before I actually was licensed
as I'm sure has been the case for many others.

Cheers and good points KD6LVW

Indeed, and if that's the case, then ALL ham gear should be on
that list...YET we already know that it is NOT illegal for a non-ham
to own ham gear...it is ONLY illegal to transmit without a
license...or are they now going to say you MUST have a ham license
to possess ham gear?

Cheers,

Rationalization!!!

I don't expect many hams will be able to custom build their own integrated circuits...although some have been instrumental in specifying I.C.s that have become commercial. Most old Hams never blew their own vacuum tubes either. Today you can buy kits that have been designed by members of TAPR, which exceed or preceed what may be available from Japanese manufacturers. We can buy I.C.s which are cheaper and more versatile than vacuum tubes were and experiment with them using low voltage batteries instead of potentially dangerous higher voltage power supplies. We can take advantage of the many cheaply available electronic components that are now even sold in Radio Shack, such as LEDs and opto-isolators.
If you have not been able to keep up with the solid-state age - that is your problem...but don't spread any fear of modern technology. I suggest that you read some of the booklets that were written by Forest Mimms for a starter. I am 67 years old but I never stop learning about electronic hardware.

> No, the future of Amateur Radio, if it has any future at all, lies in
> providing better personal and recreational communications for enough
> people to provide the political clout to keep the Ham bands dedicated
to
> that purpose.

Never happen...There is more "recreational communication" available via
the Internet than Ham Radio can ever provide. Hams can not expect to
be a very large percentage of the population in the future. Hams can
seek quality but not quantity. Hams can comply with providing the
kind of technical people who are an asset to the USA, as well as
themselves.

> Most CBrs are prolly interested in traffic and smokey reports but most
> of the ones on these NGs are more serious communicators, many doing

>
> KA3DWW

Do you want Hams to only think like CBers? Or do you just expect CBers
to think like non-technical Hams? At any rate you must start to think
about what the difference is between CBers and Hams. You can start by
reading the Basis and Purpose of Ham Radio in FCC Part 97. Why do you
think that Hams are the only group of operators who are permitted to
build and service their own equipment?

I encourage techies to be Hams and CBers to remain CBers unless they
want to learn to be techies. I understand the difference between CBers
and Hams. Those who do not; will either kill Ham radio for everyone or
convert it into Citizn's Multi-Band (CMB), which for my $.02 is about
the same thing.

Hams need MORE license classes and/or endorsements.

I'd love to be there when the judge throws it out because "no
transmission, no offense". And then racks the DA, the
department, and the officer.....

Please do not forget that mere possession by a suspected
operator is not an offense under the FCC regs. There has to be
proof of use in a manner that violates the Rules.

That's one of the biggest differences in philosophy that a local
LEO is going to have to deal with.

> opinion of all Australian CBers. And no I do not work for the ACA,
nor
> do I have any financial reasons to support the legalisation of CTCSS
> and data transfer on UHF CB.

I have already stated that the results of the previous discussion a few
years ago are a matter of public record. And let me explain it all
again, but this time I will put it in a way that you might understand.

It is not possible to expect that every single person in the CB
fraternity or any one with an interest in the CBRS will respond to a
survey or discussion by the ACA. However, the end result of a survey
can be viewed as being representative of the views of all. This is
based on the theory of proportinate distribution.

In other words, until someone comes along and develops a better system, the usual method of obtaining a consensus opinion is to sample a given amount of people as a representation of the overall body of people. Many surveys are done this way, because as stated you will never get 100% response from 100% of the people.

Unless you can figure out a better way, then we are stuck with this mode of operation. One would conclude that the trend for an issue on a given topic would become a reasonable conclusion to evaluate that the this trend would also exist if ALL people were able to be surveyed.

It has its flaws, damn_it, (not an expression but naming you) I do not deny that.

Now, to qualify what I said, back a few years when this proposal was introduced, the ACA were asked by what criteria or what method or mode would they consider a verdict on the issue, given that we were all aware that they would only ever receive a small sample of votes on the issue as not ALL would to respond to the proposal. They said that they would view the respondants as being representative of ALL interested parties as this is all they had to go on, that was the only way they could gauge public comment.

Why do you think that the proposal by the ACA failed and was knocked back? Because, damn_it (not an expression but naming you) the ACA regarded the overwhelming response against the proposal by the small sampling as representative of ALL. Do you understand?

Can you otherwise gigure out a better way to get ALL people to respond to a survey or a discussion, that is short of putting a gun to their head?

>
> > Be real, be intelligent, be constructive and be open minded
otherwise
> > why do you bother in this newsgroup, instead go post your self in
> > alt.flame because yur tone is not what can be considered to be a
> > newsgroup discussion.
>
> Rather a silly comment, particularly given your "tone"

Then stop being so belligerent. I am not tatally unreasonable or unfair, I will respond accordingly to you, but I really have no interest in beginning a thread that consists of nothing more than you and I "havin' a go at each other." Your opinion will always be respected by me whether you want to believe that or not.

Perhaps, if instead of just "havin' a go at me" you asked me pertinent, constructive questions so that you can be made clear or have a better understanding of what I say, then we might get further with each.

>
> Finally I have to apologise to other readers of this group who have to
> put up with this ridiculous thread. Give it up pus.

Don't be a hero on behalf of all users of this group. It only belittles
your character and I know you can be intelligent if you want to be.

WHAT I FIND MOST AMUSING ABOUT THIS IS THAT ICECOLD ALWAYS SENDS JOKES
FOR YEARS NOW. BUT WHENEVER IT HAS SOMETHING TO DO WITH RACE, WHAT
HAPPENS IS YOU GET SO MANY RESPONSES.
WHY?
ALL THE OTHER JOKES THAT HAVE NOTHING TO DO WITH RACE IT APPEARS THAT
THE MOST RESPONSE HE GETS IS "GOOD JOKE ICE"
CURIOUS ISN'T IT?

Message-ID: <NwmE5.51413$jD2.6611940@typhoon.we.rr.com>
Source record: 54855

I recently found an interesting article reguarding a shop in washington on the FCC homepage. This is actually a forfeiture order and it goes on how this small radio shop is being fined for POSSESSION and offer to sale of cb linear amplifiers. There is no word of "use" within this document. Just food for thought. This really changes the way I think of purchasing a unit, after hearing all the hype about how theres no crime until you transmit. It also notes how the unit isnt necessarily designed for 11 meter hower it is "capable" of operation on 11 meter. How many pieces of equipment that are in production today are "capable of use" on 11 meter?? Heres a link- http://www.fcc.gov/Daily_Releases/Daily_Business/2000/db0407/da000765.txt

> 'Doc

No doubt a 'sting' could be set up that would roll up the dealers and
manufacturers like a cheap carpet. Three items though:

1. Congress would much rather have the FCC doing things the NAB wants done
or which gets some votes for Billy Tauzin et al.

2. You have to get the local Federal DA interested and he has cheap busts
running out the ears.

3. Given that you succeed, might the result be worse than the present mess.
You and I both remember the days of 8 sweep tubes on a common parasitic
choke cooled by a phonograph motor. Hardware is not the current problem;
operator abuse is. A certain balance has been reached where the gypsters
are probably no worse than the gypees.

983. Re: TV antennas 4 CB use

Newsgroup: rec.radio.cb
Date: 2000-10-09 00:00:00 UTC
From: 'Doc <w5lz@oio.net>
Message-ID: <39E2039B.4850E6B1@oio.net>
Source record: 54864

Preesi,
As everyone else has said, a TV antenna would make a crumby
CB antenna. It may look the same, but the lengths of the elements
are too short for CB frequencies.
For a scanner, a TV antenna should work pretty well. Rotating
it 90* so that the elements are vertical would probably make it
work ever better.
For GMRS, well, maybe, but probably not very well. A TV antenna
is made to receive frequencies between about 48 Mhz and about 200 Mhz,
depending on the antenna. As long as your just listening, it would
certainly be better than nothing, but don't try transmitting with
it, it wouldn't do your transmitter ~any~ good at all.
'Doc

I realize I am a little partial, but www.exportradios.com
is the best online radio website that I know of. We try to keep the best
prices on radio equipment as well as have down to Earth technical
information for our customers to view. We also try to have one of the best
warranty policies available. Out technical staff, I feel, is one of the
best in the industry. Our company works with and is recommended by many of
the top manufactures of CB & Export Radios. There are many of our customers
in this NG that have ordered from us, and I rarely ever hear complaints from
them. I would also like to mention that I take it upon myself to make sure
that the customer is satisfied. I can be reached toll free at
(877)296-2097, or via e-mail at
sales@exportradios.com
If you would like more information about Express Electronics Inc., just
check out the link below.

989. Re: Best Mobile Radio?

Newsgroup: rec.radio.cb
Date: 2000-10-09 00:00:00 UTC
From: fire228@my-deja.com
Message-ID: <8rt85h$hg6$1@nnrp1.deja.com>
Source record: 54870

Nick,

The 10 meter radios are significantly inferior if
what you're looking for is excellent selectivity.

The receivers in export radios are attempting in
most all cases to cover as much as 8 mhz. of spectrum
with a singularly designed receiver front end. Compare
this with even the older HF equipment where a completely
separate front end is switched in every 500 khz., where
adjacent channel rejection is in excess of 80db.. Just
thought I'd mention this as you seemed to attach a good
deal of importance to this particular receiver attribute,
as well we all should.

There are some 40 channel radios that excel in this
department. I have disclosed the list in pevious posts.
If you would like more information, visit my web site or
email me at:

fire228@cybertrails.com

"The best radio in terms of receiver selectivity
is definitely not an export".....

73,
NAO911/Jack

At Express Electronics Incorporated, we have just started our own radio forum. In the past 6 months, we have been kicked off or threatened by most radio forums and Newsgroups. Why, you may ask? The answer is very simple. We want the truth to be known. We do not sell products with problems, nor do we sell merchandise that has been refurbished, we even refuse to sell anything that won't stand up to our one year warranty. When these points are brought up, it seems to aggravate our "so called" competition, as well as the many radio enterprises out there. Then there are people who tend to nearly hyperventilate at the idea of selling something that can be used illegally. As we sell radio equipment worldwide, the same laws may or may not apply to one radio operator as they do with another. We have met many people that are wanting simple answers to simple questions, but are afraid of or are intimidated by snobbish American radio enthusiasts. We feel this is wrong, and for this purpose have started our own radio forum. We want radio enthusiast to be able to discuss Radio for the sake of radio, without censorship. This will not be the place to discuss laws or consequences of breaking laws in your country. This will simply be a place for questions to be asked and answers to be given. You can even tell some of your radio stories people have heard for years, and will not have to worry about your message being edited or deleted. Feel free to discuss Export Radios, FreeBanding, Linear Amplifiers, and even modifications. This is an open forum where you and our staff can give information and talk about everything radio. This forum is for radio enthusiast, not politicians, or lawyers. If you would like to enter this forum, just click on the link below. Opening topics are still being entered, new suggestions for new sub-forums are welcome.

Game? You could be getting boxes from anyone if that from GOD! I don't give a shit. I called Gunn up and waited on a driver, emailed him a couple of days later for the 16... never answered. Tried calling Concrete about a 16 but he never answered. Why should I trust you about getting stuff in when I got the number straight to the big man? I'm gonna tell you, the only person that actually got anything thru DAVE on a pretty quick basis was Lady50 from N.Y. (she moved somewhere else). And she offered to help me out. I got so damned fed up and went XForce through Ol Steve down in the Bayou.

Why the hell am I gonna f#@k around with some small shit that you can get that I can get too? For starters, I was thinking on a 16. But then I wanted some big stuff! And the last word I got was that Rock and Concrete weren't doing big DC boxes anymore. They just refresh them. Besides, I don't want any boxes from DAVE if it ain't built by any one of these two gentlemen (10-7... you listening?).

Thats all I've got to say. There wasn't any talk of money yet when I first contacted Gunn and tried 'Crete. All I wanted to do was get an order in and that was that. Game, before you jump to conclusions and run off at the suck, think about what you're saying. Some of us don't live that damned close to DAVE... WESTSIDE Coast of CAL

Supahman got down!

If the amplifier had skin it would matter,since then wind chill factor would be a factor it has to do with the moisture of your skin which you percieve as being colder so as far as where you stood i don't think the amp would care or the aluminum heatsink really cares because they are not affected by wind chill if you stood between the fan and the air that is being sucked into the fan the air temperature is the same on both sides the fan does not chill the air. Proper ventilation and proper placement of the fan so that it blows air or suck the air across the heatsink would give much better cooling than adding a bunch of fans just bloing ontop of the unit

Exactly so why would a 3cx tube suffer melt down as long as air flows thru the fins and out of the cabinet? It shouldnt matter if it is sucked out or blown down and out . Same principle behind cooling a heatsink blow air thru the fins

What does cooling the resistors have to do with it ? If they get hot you have the wrong resistor in there . dont you think blowing the air thru the fins length wise would work better.

"Scott (Unit 69)" <upplus@hotmail.com> wrote in message news:39E11A37.A1993294@hotmail.com...

I need parts for a Midland 77-118 and I tried to find Midland International Corp on the net without result. I did find an 800 number but another business has it now. Can anyone point me in the right direction?
Thank you,
Mike, The Antenna Man

well with all this smoke around there is bound to be a fire somewhere
and all i got to say is my ears are not hearing what i want to hear,
and as far as i am concerned, this is all fun and games anyways , so
fuck it, i am going ac all the way. i would have liked to have a big dc
box to play with while i worked on my ac box and system(since presently
i am set up for that) ,but i think it is not going to happen and
anyways i need it like another hole in head. so good old uncle cd is
going to be quiet about it and you will not hear me talk about it
again, this is cd and i am back quiet, getting parts together, can you
smell what cd is cookin,.....cd is out...

In the computer, you want cooling air brought in from every crevice.
Hence the sucking out of air and the vacuum created inside the case.

All the processor fans I installed blow air into the fins, and some
instruction manuals say to orient the heat sink so air blows on to
the regulator heat sink as well. (Can you believe that, I RTFM!)

Tennessee Bassman,
I'm not an engineer, but power supply fans blow 'out' to keep dust and crud from getting into the power supply. CPU fans draw air from around/below the CPU then across it, then onto the heat-sink to get the hot air off of the CPU and onto the fins so they will disipate the heat faster. A good auxiliary cooling fan will draw outside air into the computer case, the outside air is usually cooler, and this presurizes the case to keep crud out of it. A good auxiliary fan should also be filtered. If it isn't, the 'generic' a/c filters you find at Wal-Mart can be cut fo fit the inlet. This also works great for amplifiers!
'Doc

Richard,
Your probably right. But if you reversed the flow on the 3cx series of tubes, I think you'd have a melt-down. Really doesn't matter which direction you go with the air as long as long as the flow is exhausted as soon as possible after reaching the tube.
'Doc
PS - Adding a small extension to the 'chimney' on, say a AL-1500, so that there is no 'gap' between the chimney and vent will cool things down almost twice as fast, and cut down on the noise too.

Dick,
I agree, he probably isn't going to get 'envolved'. But stop
and think about it, if you were a dealer and someone called to buy
a CB amplifier, would you ask him if he worked for the FCC? What
would you do if this person said 'no'? And, what would you do if
the person said 'yes'?? Personally, I can't see taking that kinda
chance. CB amplifier dealer/manufacturors are a 'cheap' bust...

No

>Does anyone know what might be causing this antenna connectio
>problem?

There is no problem. The possibility that you get better reception
without the outer ring of the coax connected just means that your
antenna is not even close to being a proper load for the radio.

You must have your antenna mounted properly. It should be on a
ground plane and in the open. Not inside your apartment where it
can interfere with your stereo equipment and other electronic items.

>> wire should I have from the battery to chassis ground?
>

If you have to chassis ground the amp make sure the ground strap from the battery to the chassis will handle the currrent. Your engine is connected to the battery by a heavy cable but is insulated by the motor mounts with only a small wire going to the chassis. Run a big wire from the engine to the chassis. Y0u can get battery cables like that which goes to your starter from most auto parts stores that has a big spde lug on each end. This should do the trick. This will help your radio perform as well as it can and help prevent problems your radio may cause your vehicle.

Wrong again, OYE BOY! He's not anywhere near Phoenix, so tell your buddies on the simplex frequency that they don't know jack. And as for your threats about canceling people's ISP accounts, either put up or shut up. You've been blabbing on that subject in the newsgroups since at least 1996, and you've never followed through. Guess you didn't learn anything from your mentor Frank Burns, now did ya?

"Where's that idiot Eric Oyen?"
"I wanna hear him TALK TOUGH!"

Possession implies intent,as far as everything i've read from the FCC.The exception being a licensed amateur with an amplifier that may be capable of 11 meter operation allthough designed for 10 meter. Operation would not be permitted on 11 but intent would not necessarily be implied.If it came right down to it,I suppose you would probably end up in court,trying to fight it.

>>>See my new subject post at the top. It has a link to a fcc document talking about a small store being fined for possession and attempt to sale of a amplifier "capable" of 11 meter. No mention of transmitting.<<<

yes selling them is an offfence , cause radio shops are licenced to sell cb equipment , breaking the rules that they agreed to when they got the licence is what gets them busted .

i am not licenced , and could sell my amp and not get busted for it .
i can also walk up to an fcc agent and point to my car and show him my equipment , but there is not a thing he can do till he catch's me transmitting . (note: this would be a stupid thing to do , but i am making apoint)

i will repeat it just in case .

a cb shop is licenced to sell radio equipment . and when they apply for that licence they agree to a set of laws . if a radio shop sells a cb amp , yes they will get busted .

if i sell my CB amp can i get busted ? nope

shops , just like ham's are held to higher standard cause of there licence . and i think the few shop owners the frequent the group will be able to tell more on this .

read the fcc codes on cb , possession is not mentioned .

No license is required to sell radios except perhaps a sales tax permit from the state. Offering a linear for sale is the offense, the FCC doesn't even have to buy it. Possession of an illegal linear presumes use and you would get the appropriate punishment.

Keep repeating the mantra until you really believe it. Won't do you any good but it fills the time.

Dick

The difference is in the route that the air takes, and what it
encounters along the way. The ideal air flow would be cool until
it picks up heat from passing through the cooling fins of the tube.
From that point, you want to get rid of the 'hot air' as quickly as
possible, without 'loosing' any of the heat it's carrying inside
the amplifier. So the shortest route to the out side after passing
the tube is what you want. Also, ideally, this air flow that cools
the tube shouldn't be used to 'cool' the rest of the amplifier,
another air flow should handle that. But, since everyone likes to
save money, the same air flow is usually used to cool the tube and
the rest of the amplifier. You can do this by carefully designing
the route of the air flow, large outlet/small inlet at any 'openings'
in the air flow route (that keeps the hot air from leaking out, but
draws air into the air flow route). It's a lot like designing a
sewer system, lots of inlets, just one big outlet, and no 'back flow'!
Still comparing to a sewer, when the flow is reversed, a lot of ****
hits the fan!(sorry 'bout that). As long as the sewer, or air flow,
goes in the right direction, it doesn't really matter if it's under
pressure from a fan blowing it, or under a vacuum from an exhaust
fan. But if the direction is reversed, it's a different story...

Another analogy.
Which makes the most noise, blowing on the small
end of a horn, or sucking on the large end? When you
check the dynamics of air flow, this analogy really does
hold up! (and I couldn't resist, sorry)

I have to agree with you Game, if the resistors are getting hot you have another problem to worry about. The balancing resistors shouldn't get hot if the amplifier is properly balanced, input and output. The only part that would produce heat under normal operating conditions is the output transformers. Everyone thinks the transistors get hot on the covers and you have to cool them, it takes a small amount of air blown (or sucked) :-) to cool the top cover down on an RF transistor, not to mention that the top cover will take a lot of heat. What a lot of people don't know is that no matter how cool the top of the transistor is the die is still the hottest part of a transistor. You could put ice-cubes on the top caps of a 2879, but the bottom will still get very warm, very fast.

You may well be right but I am hesitant to attribute to conspiracy what can be equally well explained by stupidity. My own pet theory is that the FCC is kept on a very short leash by a Republican Congress beholden to the National Assn of Broadcasters. Even if Charlie gave a damn about 27 MHz he wouldn't do much. Doing something the NAB did not bless would result in a budget cut. Piss off Billy Tauzin and the whole linear industry and its marketers would disappear in a giant RICO action in 30 days flat.

And if you interpret that passage properly, it states that there must
be other evidence that you operated on the CB with the amp.

Posession is not illegal. Transmitting is. They will assume you
transmitted with it if it is in your posession AND there is other
evidence that you have transmitted with illegal power.

This is not hard to understand.

1062. 62.5 AMP DC Power Supply - cheap

Newsgroup: rec.radio.cb
Date: 2000-10-09 00:00:00 UTC
From: supply <radio>
Message-ID: <v8d5usojt1r3svo7cgp767ki6kn34s2ub1@4ax.com>
Source record: 55020

Email Address Is Below !

Brand New ASTEC:
VS3-K0-K2-K3-00
Single Phase 85 - 264 VAC /// 47- 440Hz Input
Three terminals for output:
one 2v @ 150amps
two 5v @ 150amps
three 12v @ 62.5 amps - For Ham & CB Gear

Detailed Specifications On Power Supply:
http://www.astec.com/products/1150.astec.pdf
(Must have Adobe Acrobat installed to view)

This page show a different model for sale:
http://www.newark.com/
Search for "manufacturer" part number and enter "VS3"
for other models then use the PDF (Adobe) specification
chart to compare output watts / amps.

One example is a VS3-C6-C6-20
which is VS3 or 5x8x11 case
Terminal one is "C6" which is 28v @ 32.1amps
Terminal two is "C6" which is 28v @ 32.1amps
The unit on that page is about $2,000

I'm selling this for $120 UPS Shipped

Based on your statement above, I make the following conclusion of law: An unlicensed individual operating on 28.4 MHz is in violation of 47 CFR 95 (and NOT, or at best, simlutaneously 47 CFR 97) because he is now classified as a CB operator, even though the frequency in question is allocated to the amateur radio service.

Don't you see a problem with that? I do. The conclusion is wrong. Even so, it's more likely that the person will be prosecuted for not having an amateur license than for a CB service violation.

by the way world wide peak a boo, does the peakaboo radio company offer lifetime parts and labor warranties like the xforce folks do? also another point you may consider is that this deal may be the one that comes around and bites you in the ass because being the nice guy that i am, and i happen to run into any red shirts wherever, well you know all i will do is point at you , after i kick their collective asses and they ask me who made that bad ass damn box for me. well you know how it is. all is fair in love and war. this sure aint love but it could be war. and as far as i am concerned, it makes me no never mind. i am a business man and this is strictly a business deal. and if this type of thought pattern bothers you, then perhaps you should leave this alone. but it doesn't bother me. i can assure you. perhaps you are in need of some extra money with Christmas coming up, etc. this is something perhaps you are considering as i type. well think about it. i am very serious. but i cannot in good faith pledge to you that i will not stomp the ever loving radio daylights out of any and i do mean any of those red shirts that try and get in my way. or anyone else for that matter . this is what is on my mind. just a thought. have a nice day,.........cd is back in the bushes readin da mail......

Ok he said to get a K-40 rather than a roof mounted wilson of any sort..was leaning on getting the 5000. All the info that I have read about the K-40 is that it is rated at 500 watts!!! The sixteen would fry that in a heart beat!!! Also he stated that Wilson sold out to Barjan, and are now junk, anyone else heard this???

Second thing...I bought the factory fan kit for the DX-1600 and he told that the fan blows into the amp and he is thinking that it should suck the air out of the amp and not blow into the amp. It does make sense to me to take the heat out...why would they design it to to this???

.....
On a factory sweet sixteen fan kit, the fan is attatched over the heat sinks, so the fan blows the air on the heat sinks, not into the amp on the transistors. There are some people who cut holes in the top of the transistor side and mount fans. Some of the Texas Star Dx1600's have air vents on the sides of the top cover over the transistors to vent the heat from there. The amp has a thermostatic controlled fan switch built into the amp that will turn the fans on and off as necessary, but some folks straight wire it to leave them on whenever the amp is turned on.

1079. Newbie; questions about antenna connection

Newsgroup: rec.radio.cb
Date: 2000-10-09 03:16:39 UTC
From: spirilis@scitus.yi.org
Message-ID: <rMaE5.1309$cv4.406394@news.abs.net>
Source record: 54961

I've been recently given a Realistic TRC-479 from a friend, with a rusty 'old magnet mount antenna with coax cable. Since I haven't hooked it up to the car yet, I decided to rig it up in my bedroom with a simple power supply (actually the yellow and black wires from a hard drive power cable from a computer's power supply--seems to work fine)

Anyway, when I connect the antenna connector to the back of the CB (both inner and outer connections), I hardly get any signal, and only barely a tiny bit of static when I turn the volume all the way up; however, when I connect it so that only the inner part of the plug is connected, I get a good signal, lots of static (at lowest squelch setting) and I can hear other conversations (haven't bothered interrupting or break'ing in yet, just tried transmitting once to see if the TX light came on--but whenever I transmit I can hear my voice over my stereo across the room... interference or something?)

BTW, the magnet-mount is mounted on the center of this old computer's metal case (the case is off the computer), just sitting on the bed next to the computer whose power supply is being used. And I don't have an SWR meter (just decided to get into this stuff after my friend gave me this CB)

Have I fried the CB somehow? Does anyone know what might be causing this antenna connection problem?

Please reply straight to my email; I don't monitor USENET very much

Thanks in Advance

Please dont laugh, but I need to know If I can use
the unused tv antenna on my chimney for either CB
(beams look similar) or my scanner or GMRS.
I used an "all band" combination TV, radio, scanner
flat antenna on my scanner, that worked great until it
busted.

Let me know, thanks.

Preesi

A tv antenna would make an ok scanner antenna if you tilted it
vertically. I wouldn't try to transmit on any band with a tv antenna
though. They aren't designed for it.

He is scanner nerd who walks around with 3 scanners on his belt and a pocket protector to keep his ink pens from staining his pocketed turtleneck. He does not wash his hair but one time a week and you can see white flakes in his sideways parted grease mop of a hairdo. Most of his scanners are illegally modified and he uses then to listen to perverted phone calls. He gets his handle from a receivers model number, I believe it is made by Yeasu. He calls himself this because he spends 90% of his awake time listening to it. Oh yeah and he hates CBer's!

1088. Storm Built Amps

Newsgroup: rec.radio.cb
Date: 2000-10-09 05:24:01 UTC
From: mybigcb@aol.com
Message-ID: <20001009012401.07662.00000869@ng-cf1.aol.com>
Source record: 54970

Anybody ever heard of these amps. Suppose to be made in Fla..
Are they any good, what about service, and do they do the watts
as told. Hear guys talking about them on channel 32 during
lunch time everyday. Just looking for information on these.

1089. WATTS

Newsgroup: rec.radio.cb
Date: 2000-10-09 05:28:07 UTC

YOU ALL WANT THEM!
YO ALL NEED THEM!
BUT WHEN YOU ALL GET THEM YOU ALL DON'T KNOW HOW TO RUN THEM!

SO WHAT DOES THAT TELL YOU ALL..

YOU CAN HAVE A DAVE-MADE,OR A X-FORCE,
THEY RUN THE SAME!

SO IF YOU "GOT TO GET A AMP"
CALL DAVE-MADE "NC"
OR CALL X-FORCE "IL"
"IT'S THE SAME FUCKING AMP "
NOW YOU ALL CAN GO BACK TO YOUR HAMMER-SLAMMERS AND KEY ON YOUR SELFS..

Again, the Peoples Republic of California has tried that approach on "assault rifles" with miserable results. If I were selling "amateur" equipment to CBrs and my "Killerwatt 2000" appeared on FCC's list, I'd simply change the knobs or paint color, rename it "Killerwatt 2100" and keep right on selling them - legally! That's exactly what several gun mfgr's are doing.

But that's not the real problem, the problem is overzealous enforcement by LEOs who haven't a clue. As many of you must know, many modern CPU-controlled radios can operate as CBs or 10m ham rigs. One I have considered can be either one depending on what buttons you hold down whilst turning it on. Now, unless you're going to punish innocent amateurs, it is and would remain legal for me to connect that radio to the aforementioned "Killerwatt 2000", even tho it was on the list, so long as I only used it on 10 meters. However, given the horror stories coming out of the gun community about similar laws, I might even be killed for doing so by some overzealous idiot whose football game had been zapped by QRM, legal or otherwise.

Consider the Ruby Ridge fiasco. Randy Weaver's only crime was tax evasion - he had shortened 2 shotguns something like 1/4" below the 18" limit without paying the $200 (each) tax! But overzealous LEOs mounted an attack that left Weaver's wife and son, plus a federal marshal dead and taxpayers owing Weaver over $2 million!!

The FCC has a proven track record of reasonable law enforcement. They may not catch every law breaker, but neither does anyone else; and they don't kill innocent people trying! Why on earth hand their authority to agencies who do?

Impedance matching and phase shifting in a futile attempt to make it stable.

It also gives those folks who like to 'screwdriver' those tweaks and peaks a misguided sense of personal accomplishment.

Your not kidding, If you leave a trimmer in it they will turn it.
I have seen trimmers in this particular amp turned so many times that you
could hardly see the screwdriver slot. I think TNT left them in there
because it saved them time. They did not have to take out the cap and
measure it , replace it with a mica etc.etc.

It's a very tight fit, but it is possible to pressurize the lower cabinet (just the area under the tube socket) and fit in a 3CX800 or an 8877.

> 4 to 5 KV insulation

That's only about 600 watts of CW INPUT power!

> - 1250 volts at 2 amps
> centertap at 10.5 volts@30 amps and 24 volts @ 4 amps
> 230 primary
> 10 KV insulation

Now this one is more like it!

2500 watts of CW INPUT power to a pair of 3-500Z's or multiple 'popcorn'
ceramics.

Well Cap`n Crunch, I saw no reason to differentiate between black and white when I typed my response. I see only that it was invented by an American. I`m sorry if this offends you. This is just my opinion.
You need to take a closer look at the Real McCoy that is manufactured today and compare it with the original version, if you are trying to get technical. They are not the same, but do accomplish the same task.
BTW I own some of the original Real McCoy oilers and know what the versions are that are used today on various equipment.
BTW Cap`n, I am also certified Captain.

From everything that I have seen and heard about that antenna, I believe it may just turn out to be the very best vertically polarized, 5/8ths wavelength, CB base antenna that has ever been offered to the public!

It's price is large, but you get the performance and reliability that you paid for.

That term was also used to refer to some model airplane engines that were built in the 50's and 60's by a company called McCoy.

They painted their cylinder heads red so that even from a distance they would not be confused with anyone else's engine.

If you saw a model in flight with a red cylinder head you knew it was the REAL McCOY!

A very good marketing gimick indeed!

> out.........
According to the "Oxford Dictionary of Modern Slang":

McCoy
Origin uncertain; amongst the suggested derivations are that in its original form, the real Mackay, it refers to the true chieftan of the clan Mackay, a much disputed position, and that the variant the real McCoy (first recorded in 1922) refers to kid McCoy, the proffesional name of US boxer Norman Selby (1873-1940), who was nicknamed 'the real McCoy' to distinguish him from the other boxers who tried to se his name.

Richard.

From: Todd <ktm@lanset.com>
Message-ID: <39e356ee@sacnews.sac.bfp.net>
Source record: 54915

Last night for the fun of it. I put my 5' Firestick II on the end of my I-MAX 2000. I can't believe how much better the antenna works. More none skip & skip range, lower swr, better power dissipation. It flat kicks ass on both 10 and 11 meter. Firestick makes a 5' antenna for the a99, that's where I got the idea. TRY IT - YOU'LL LIKE IT!!!! I ended up taking the screw out of the antenna for the best swr. I also tried a 3'. The swr was lower on the low and hi end and higher in the middle. But a 5' work really well. A 4' might work better, if I had one I'd try it.

Dear Dave,

Back in the days of prohibition there was a rum runner with the last
name of McCoy. He was so good that other captains started saying that
they were him to get business. Thus the term "The real McCoy". I saw
this on the History Channel. 88's to ya!

Clarification: Profit NutsacKKK's a No-Code Technician, which means
he's too FUCKING stupid to get HF privleges. He lacks any Electronics
knowledge, and would more than likely stick an oscilloscope probe up
his ASS than in the right location.

1122. Re: Use not possession??? LAW vs BS

Newsgroup: rec.radio.cb
Date: 2000-10-10 00:00:00 UTC
From: Old Biker <enfield@3n.net>
Message-ID: <39E3649C.365F7660@3n.net>
Source record: 54927

Yes you can legally possess an amplifier, but no you cannot sell it except to a licensed amateur and possession can be used to prove you used it.

Go to

<http://frwebgate2.access.gpo.gov/cgi-bin/waisgate.cgi?WAISdocID=0212930407+1+0+0&WAISaction=retrieve>

There, you'll find 47CFR2.815 which says

"(b) After April 27, 1978, no person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency power amplifier or amplifier kit capable of operation on any frequency or frequencies between 24 and 35 MHz."

The shop in question got fined for violating the above rule, not for possession. There are exceptions to allow licensed amateurs to build amplifiers for their own use and to sell them to other amateurs, and for shops to buy and sell these amps from/to amateurs.

The FCC and courts have ruled that, altho posession is itself legal, mere possession can be used as prima facia evidence to prove illegal use if accompanied by other evidence. That means that if a neighbor complains that you're interfering with her TV (the "other evidence") and FCC finds an amp in your possession then you are going to be convicted and fined unless you can prove you never used it (a near impossibility) OR unless you have a license to use it (hint! hint!).

Ok, obviously the humor aspect didn't go over to well with you, BUT you do agree that code has come and gone.

With regard to 5WPM being an insult, and not picking up bad habits and making it to Journeyman 16wpm I just have this to say:

WHY SHOULD I LEARN HOW TO SHOE A HORSE when I'M DRIVING A CAR? I could shoe 5 horses in an hour, and with good practice and study, WOW, you mean to tell me that I could shoe 16 HORSES in an hour!!! Oh man, let me get my hammer... Stoke those coals, I'm REALLY interested in learning about this. *>NOT<*

As far as the guy from Arkansas, Uhh, no... I hope that you weren't insinuating that I'm as ignorant as that example.

You know, I bet that if you worked really hard at it you could make arrow tips out of flint! And if you studied really hard, you could probably make several an hour!

My God man! Let's just say this. I'm not interested in HF, I am a technician class HAM. I got into HAM for Packet radio, which is limited in so many ways we can't even experiment with the latest modulation techniques and a whole other bunch of really cool technologies. My POINT that you MISSED is that CODE is OBSOLETE!

Do you own a horse or something?

People are so quick to take offense... Relax man... Wasn't aimed directly at you. 56 aint old... Heck, most of my friends are in their late 40's, early 50's...

foxie is a large heavy set black woman , who lives in florida and
somehow got into this cb amp scam. that way she can get her government
help and pocket the cash she makes off of this cb shit and not pay any
taxes, and still act like she hasn't got a dime, geez why didn't i
think of that,.....cd is out....

I don't even have an HF Rig... No need for it... I used to be into CB, and I'm thinking of getting a Radio, BUT That's only to talk to several of my friends with which I play games on the net with. Weekend warriors so to speak... The few that are stuck on Dialup got CB's as a way to communicate while their phone is busy during the games. But, I just can't see taking down my 70cm antenna to put up this huge stick in the shed from years past. Plus all the riff raff on the band... Probably make the game unenjoyable.

I'm on 70cm, and that's it. Usually packet at that... But since I moved the Lab upstairs I haven't had time to set it up.

In a chat, I asked Moron-Boy if he thought zener diodes were a good
choice for a full - wave rectifier...just for a GOOF...and he claimed
to use them with good success on high - voltage power supplies.

Tsk, tsk.

Where's your crown, King NutsacKKK?

>with good prices and is honest.
>

After looking around quite a bit, I decided to order my radio from Dave at Express Electronics. They will match or beat prices if you see it lower at another site. On the pre sale part, Dave was curteous, professional and patient with lots of piceune questions on my part. My radio will be arriving in a couple of days, so I will know more then.

Oh yeah, get the best antenna you can, its the most important link in the chain.

Regards, Nick

Message-ID: <S7LE5.48341$K46.137737@typhoon.kc.rr.com>
Source record: 54944

This is interesting :) Ok..The only thing on this is that the heatsinks on top of the 16 are solid...meaning that it draws (or in my case pushes) the air thru the heat sinks..the bottom side has two 4" fans blowing into the unit as well coming out of vents on the side...I going to keep the four fans blowing into blow the heatsink and the unit..watching it close...someone else said that there was a thermostat or something or the rather that controls this...on my jacked legged amp, the other guy who owned before me diconnected and removed both this and the fuse protection that Texas Star installed in the stock amp...therefore when the amp in on the fans are on...which in my thinking is not a bad deal anyways!!! (fuse protection has been added back)

Thanks for all the feedback..

Ron

>
>i will repeat it just in case .
>
>a cb shop is licenced to sell radio equipment . and when they apply for that

You do NOT have to be licenced to sale radio equipment. In the State of Kansas all you HAVE to have is a Sales Tax number. This to me is like running a 7-11 and selling LEGAL over-the-counter-drugs..and then trying to sell illegal drugs as well. Saying will I am licenced to sell drugs..Amps are not kosher no matter what!!..just do me a favor and don't peek in the cab of my pickup :)

And "possession" is implied use!!! Really my amp is only for looks....slows down the flow of electrons before it gets to the antenna...do not pay any attension to the off/on switch...it is there for looks...

BTW: This post was done with humor intended..NOT hate and malace....was NOT a slam to the fella who posted it...DO not take it anyother way PLEASE.. :)

>licence they agree to a set of laws . if a radio shop sells a cb amp , yes
>they will get busted .
>
>if i sell my CB amp can i get busted ? nope

Simple... All you need is plausible deniability... Put a walkie talkie in the rig in close proximity to the driver. All the driver has to say if asked is, "I only use that one for receive!" Unless he/she is dumb enough to key it in front of the officer(s) they've got deniability. When pulling into weigh station, pull mic from radio... That way there is no way to TX.

1165. Re: whats got the ham's panties in a bunch ?

Newsgroup: rec.radio.cb
Date: 2000-10-10 00:00:00 UTC
From: Karl Vesterling <kjv@adelphia.net>
Message-ID: <DRAE5.26$%J6.1936@news1.news.adelphia.net>
Source record: 55073

Well, I'm a HAM, N2VQM, but I don't care about HF... I see no point in morse code. I'd rather tap out binary ASCII. At least that way there is some logic to the dots and dashes... Relax, I'm sure it's just a matter of time till the old codgers who insist on morse code die off. I mean, can't we do this on a silicon chip???

Most of these people who insist on morse code always come back with, "Yeah, but what computer are you going to use if an EMP happens?" Well, I for one have grown out of this Commie hysteria involving paranoia over the commie missile threat. So, let's all leave them in their subconcious bomb shelters in the back of their minds and wait. It's just a matter of time till they're "Big one" comes.

Simply put, they're getting old and they need something to complain about besides their arthritis which keeps them from doing morse code.

I mean let's get serious. It all boils down to the newer generation(s) boycotting the requirement for morse code. Here's an analogy. Having to know morse code to operate HF is about as rediculous as having to know how to shoe a horse when taking your drivers license test!

Get rid of the code requirement, and most people would get their HAM license and they could run their power, talk their DX and everyone would be happy. But, sorry to say the old cronies still need something to make themselves feel superior to others.

But if you find yourself in a conversation with one of these fine people of the elder generation that say our generation doesn't have any respect, just be sure to ask them this, "Well, if we don't have any respect, just how do you explain your generation starting a lake on fire with it's own garbage and polution? (Lake Erie - I'm pretty sure some time in the 70's). And, how do you explain our generation having to clean up after your generations toxic waste dumps? Also SIR, how do you explain our generation paying your social security while paying off YOUR national debt? If you ask me SIR I think you're wrong about MY generation. You SIR are biting the hand that feeds you AND shitting on the hand that wipes your ass! In retrospect SIR please be carefull where you step. Be advised that if you shit on or bite that hand one more time and I'll have to use my foot because I'm almost out of soap! However SIR if it makes any difference, thankyou for protecting democracy in the free world."

Then let them sit and stew in their own excrement for a while to see what happens...

GET RID OF THE CODE GUYS!!! Come on now... Really... Otherwise we'll have to lobby for mandatory eye exams and drivers tests for license renewal after

age 65. I mean wouldn't you rather drive a buick than take a taxi?

Just one question: Anyone here know just how to shoe a horse? Is there Nike for horse? Perhaps Addidas? Do they have saddle fashion shows? If so, who cleans the runway? Oh silly me, probably the same guy that lists morse code as an employable skill on their resume.

There are any number of us OT coded-FCC examined-Extras who fully agree that the day of code-testing for amateur tickets has come and gone. Now that you have vented your spleen and couched things in generational warfare terms (I snipped it to spare you the embarrassment, again) let us get down to the realities of the situation:

1. The FCC, ITU etc care less what us old farts (and I am 56, hardly dead) think about much of anything so a Final Solution does not accomplish a hell of a lot.

2. The code requirement is on the way out but not for a while and possibly a long while. It just is not important enough to get an agenda slot at ITU meetings.

3. Five WPM is more of an insult than a code test. Might take you two weeks.

4. If you survive the test without learning a lot of bad habits, and maintain your interest in DX, you will at some point learn the code at Journeyman level, about 16wpm, to work any number of people who do not speak English. Or perhaps you care to take the position of the Arkansas resident who - when his local hi school took up foreign languages - opined that if English was good enough for Jesus it should be good enough for everyone.

The present system is a bit weird but that is the way it is. Takes less time to learn the code than bitch about it.

This self over-promoting load is in need of being kill-file fodder. All this http://kjv.homeipFATLOADSPAM.net is getting out of hand. Get off the friggin computer fat boy and go back to eating or doing your GOLDEN SCREWDRIVER thing.....Stop wasting our time and bandwidth. If you actually spent the time to lurk in the group and read the posts in here for even a short period of time you would know there are plenty of people in here that have shops and refrain from the self-promotion BS.....Time for you to get on the wagon Bubba!

Train,

Grow up and get a real life. They guy is telling us where to find
information. If the web site is a buisness then so be it. Atleast DOC
has a job repairing radio's and providing Information about them that
is CB radio related. I don't see you doing anything along the same
lines. All I see is an idiot know it all that whines and bitches
because someone points out information on a cb radio site that is a
guy's buisness and you call it SPAM. I think you better learn what
SPAM Really is.

Pray tell, how will *ANYONE* "straighten out" something that may not be
the fault of the receiver? Is he going to come to town with a pair of
coax cutters?

I just love "whiz techs" that THINK they can solve every problem, while
most have little idea of what it is they are actually dealing with......

I agree, not only that but DOC fixed two 2510s and a 2600 for me, and
they couldn't have been serviced any better, so I welcome posts that let
me know where to find any good techs like that. BTW, he also helped me
recover two stolen radios from a buyer who wrote a bad check. Name a
repair tech that has done that for a customer...

I actually DO have a life! I could also sit here all day and SPAM the group with MY site..... WWW.CBMODS.COM until your eyes bleed. For all the years I've been in this group, that is NOT what it has been about. As I stated in my first post, there are plenty of us out here that have shops but don't use the NG to promote them. I've been in this for over 20 years now myself. There are plenty in the NG that either have my products or are talking on my work.
Nuff said!

As the previous poster mentioned... 5wpm CW exams will be with us for a while yet... (I'd bet on at least 5 more years). The FCC does not have the final say on deleting code requirements.... they're there on account of international agreements which I foresee changing in future. Question is... Do you want to wait that long? (..although your post made it clear you want nothing to do with CW, it sounds like you're pretty interested in those HF privileges)

> I mean let's get serious. It all boils down to the newer generation(s)
> boycotting the requirement for morse code. Here's an analogy. Having to
> know morse code to operate HF is about as rediculous as having to know how
> to shoe a horse when taking your drivers license test!

Not a bad anology, but from what I've seen of Ham radio, cheap internet access, cheap cell phones, and cheap pagers are what detract more from Amateur radio ranks..... Amateur radio still has some 'cutting edge' technology in some areas, but most of the hobby is 'old tech'. Slow Scan TV on HF is really cool (you can see who you're talking to).... but one can do that fom a computer online and get real-time video/audio/text to boot! (without fading, QRM, etc, I might add)

> But if you find yourself in a conversation with one of these fine people

> think you're wrong about MY generation.

YOUR GENERATION??? I hardly think there's only ONE generation paying for all of the ills you mention.... the 50's, 60's, 70's and 80's generations, not to mention the 90's generation will ALL pay for our father's

mistakes..... Just as the generations of the early 1900's-30's (Great Depression / WW1 / WW2 / Korean War vet's generation) paid for thier father's previous errors. Nobody gets through life for free!

> GET RID OF THE CODE GUYS!!! Come on now... Really...

In time..... but, what then? Will any exams at all be too much?? 5wpm??? Pshaaaw! ...takes just two weeks to learn it and you'll never have to use it again if that's your desire.

.....BTW....The real McCoy is named after it's inventor, a black man from
Detroit. They not only WERE used, but are still in production today and
used in many manufacturing processes.

1187. FS: Realistic TRC-212 40 ch Walkie-Talkie

Newsgroup: rec.radio.cb

Cross-posted to: rec.radio.cb,rec.radio.swap

I have a Realistic TRC-212 (21-1662) for sale. This is the full size 40 channel unit with carrying case. High/low TX power switch. Around 5 watts output on high. LCD display with TX and receive meters. Great shape. Original long (around 5 feet) center loaded antenna. Has external antenna, power and charging connections. Has an 5-pin external mic connection as well. Uses 8 'AA's or 10 'AA's rechargeables and you can recharge the batteries WITHOUT taking the batteries out. (Batteries and charger not included)

Asking only $ 45.00 (US$) INCLUDING shipping from Canada
Great deal ! ! !!
A Picture can be e-mailed.

The reason they look alike is because they both use the dominator, real deal
design of amps so thier wrapping and combining techniques are similiar
..noname is also starting to use alot of daves parts in his amps as well

As noted, I agree that the day of code-testing has come and gone. We have no debate about 'should'. What I AM having a little problem understanding is why someone who cares less about HF should get his knickers knotted enough to use an inappropriate forum to preach to the convinced. The rules is what the rules is and will be for some time and hate it tho you might CW does have amateur uses. Make your decision and live with it like a man; spare us the whimpering child act blaming everyone but yourself.

Hi,
Was just wondering if anyone out there knows what resistors, inductors etc. to play with to peak up a Tram Diamond 60 rig. I know that for audio boost its R-98 for am, and R-112 for SSB, I was just wondering if anyone could add anything else to this, such as bringing up the wattage etc. Any additional info here is much appreciated. Remove the "1" out of my email adress if you write to me directly. Thanks a lot,
Jagzilla

snip

>The FCC and courts have ruled that, altho posession is itself legal,
>mere possession can be used as prima facia evidence to prove illegal use
>if accompanied by other evidence. That means that if a neighbor
>complains that you're interfering with her TV (the "other evidence") and
>FCC finds an amp in your possession then you are going to be convicted
>and fined unless you can prove you never used it (a near impossibility)

Not !!! Interference, TVI does not substantiate excess power use.
The excess power use is the "other evidence" that the FCC needs in
conjunction with the possession of an amp to cook your goose.
Interference can be normal and not associated with excess power.

> A very important factor to remember is that your antenna is the most
>important
>thing for getting radio performance. Its been stated on this newsgroup many
>times, a poor radio and a good antenna will signifigantly out perform a good
>radio and poor antenna. I am going to use a Wilson 5000 with my new radio.

Nick and all the others who replied:

I decided to go ahead and get a Cobra 29 NWST. I am not interested in the
export radios, having previously owned a DX55V.
I just want a good receiver with decent selectivity and adjacent channel
rejection.

I agree about the antenna, I have the Antenna Specialists version of the Wilson
1000 and K40, big coil, long whip. But in a mag mount the minimum SWR is near
2.0:1, refuses to adjust any lower, probably due to being mag mounted. Until I
get my new company car I will most likely use a mag mount. At that time I will
probably mount a 48" center loaded fiberglass with real frame ground.

While on the subject, what does the Wilson 5000 have over the 1000?

As for pure performance, the old 102" whip is hard to beat, a full 1/4 wave
length, good frame ground and lots of tree knockin'.

Hello Dave: Yeah thats a BIG Ten-4.

Steve was over here a few months ago, he lives just down the road ah ways.
He got the second Mastodon 5000 Proto-Type antenna, and compared it to his Sigma 4, and A99.

He left here after having a little BBQ and a few refreshments, and a Mastodon in the back of his truck. Steve is just plane good people and does a lot of radio work for the locals. He helps a lot of people out, and many times doesn't charge them anything. He is a Master Machinist and has quit a antenna farm.

Yeah 20 bucks is cheap! If he reads this, I'll have to restock the refreshment supply, ... again. Thanks Dave, your ah big help!

Professor wrote:
>
> Come on Dennis... you just admitted that those caps and air coils are for
> impedance matching...
> That by definition is a narrow tuned amp!

Think about it for a while Professor.

The coil is in series and the capacitor is in shunt.

If they were tuned in series resonance at the transmit frequency you would have the RF equivalent of a direct short to ground.

But if they are NOT in resonance they can still be used to phase shift or match impedances, because both elements can affect the phase relationship between E and I in the circuit.

Anything that affects the magnitude and phase between E and I is affecting IMPEDANCE.

Impedance is a VECTOR and is properly described as a quantity at a phase angle, or as the two elements (real and reactive) that it is comprised of :

Example #1) 50 -j10 ohms has an impedance value of 51 ohms at a negative phase angle of -11.31 degrees.

Example #2) 50 -j40 ohms has an impedance value of 64 ohms at a negative phase angle of -38.66 degrees.

Example #3) 35 -j35 ohms has an impedance value of 50 ohms but at a negative phase angle of -45 degrees.

If we added a network with a value of 0 +j35 ohms to example #3 above, the result would be 35 -j0 ohms, or a pure resistive impedance with a value of 35 ohms with the voltage and current in phase with each other.

This shifted the phase AND changed the impedance did it not?

I agree that there may only be one frequency where the resultant phase shift would be exactly 0 degrees, but the 'Q' of such a circuit would be so low that it could cover many OCTAVES of frequency change without any noticeable difference in the results.

As a matter of fact, if the 'Q' of the coil was very low, that would mean it had a large value of resistance relative to it's inductance at the frequency in

question, so it might be possible to have a network with a value of 15 +j35 ohms if we were far away from the frequency of resonance.

To get 15 ohms of resistance the coil might have to be quite large and may have an reactance component of +j200 ohms at the transmit frequency, so to get a net result of only +j35 ohms we have to add a capacitor with a reactance value of -j165ohms at the transmit frequency.

The end result would be cancellation of most of the reactance vectors and a an equivalent network value of 15 +j35 ohms.

If we added a network with a value of 15 +j35 ohms to example #3 above, the result would be 50 -j0 ohms, or a pure resistive impedance with a value of 50 ohms with the voltage and current in phase with each other.

That is the kind of signal you want to feed into the next stage of your amp.!

The OPTIMUM solution would be NOT to waste any power in the resistance of the inductor, but at least you would have a stable amplifier and you can always make up for the power loss in the network by the stage gain of the amp..

#12

Gee, if they're not the same person, one asks oneself why it is he's
all fired up interested in promoting this guy in the first place. Such
glowing, oozing, semi-sweet reports are genearlly reserved for the
poeple one is sleepig with, and not "just a friend who happens to use
my website for a web presence."

Between 4 and 10 mentions of the site, between 4 and 10 glowing
recommendataion about this guy, in under two hours? Come on. Do you
take this newsgroup for fools? We can see thru this one, "Karl". A
webpage promoted by you, using a non-static domain name pointer using
"your" initials, and you thought we wouldn't notice...

Can you say "smurf target"?

-SSB

On or about Wed, 11 Oct 2000 01:36:03 GMT, "Karl Vesterling"
<kjv@adelphia.net>, using the forum rec.radio.cb did say:

:You know, it seems to be ok for you guys to recommend someone, but suddenly
:when I recommend someone you're taking offense to it. Fact is, I AM NOT
:TOM! Really, tis true! Here, check the spelling:
:
:Karl J. Vesterling
:^^ This is me...
:
:Tom Bridge
:^^^ This is him.
:
:See the difference??? Yeah, kjv.homeip.net, that's my machine... /~hr2510
:<- but that's Tom...
:
:Now, why are you guys so peeved that I am such a satisfied customer that I
:would go out of my way to author a site for him, and recommend his services?
:
:I just can't make sense out of it... Oh, worried about the bandwidth are
:ya... Yeah, those 150 bytes in that message really put a dent in your modem
:now didn't it... Come off it... Get real. This guy has fixed rigs that
:other techs couldn't even begin to think about fixing. He's got to be the
:best chipswitch tech on the east coast. And you guys are all bent out of
:shape that someone is actually so happy with his services that they're going
:out of their way to recommend him.
:
:Gadzooks man... Come off it.

:> At Express Electronics Incorporated, we have just started our own radio
:> forum. In the past 6 months, we have been kicked off or threatened by
:most
:> radio forums and Newsgroups. Why, you may ask? The answer is very simple.

:> We want the truth to be known. We do not sell products with problems, nor
:> do we sell merchandise that has been refurbished, we even refuse to sell
:> anything that won't stand up to our one year warranty. When these points
:are
:> brought up, it seems to aggravate our "so called" competition, as well as
:> the many radio enterprises out there. Then there are people who tend to
:> nearly hyperventilate at the idea of selling something that can be used
:> illegally. As we sell radio equipment worldwide, the same laws may or may
:> not apply to one radio operator as they do with another. We have met many
:> people that are wanting simple answers to simple questions, but are afraid
:> of or are intimidated by snobbish American radio enthusiasts. We feel
:this
:> is wrong, and for this purpose have started our own radio forum. We want
:> radio enthusiast to be able to discuss Radio for the sake of radio,
:without
:> censorship. This will not be the place to discuss laws or consequences of
:> breaking laws in your country. This will simply be a place for questions
:to
:> be asked and answers to be given. You can even tell some of your radio
:> stories people have heard for years, and will not have to worry about your
:> message being edited or deleted. Feel free to discuss Export Radios,
:> FreeBanding, Linear Amplifiers, and even modifications. This is an open
:> forum where you and our staff can give information and talk about
:everything
:> radio. This forum is for radio enthusiast, not politicians, or lawyers. If
:> you would like to enter this forum, just click on the link below. Opening
:> topics are still being entered, new suggestions for new sub-forums are
:> welcome.

Newsgroup: rec.radio.cb
Date: 2000-10-10 00:00:00 UTC
From: sideband <sideband@cac.net>
Message-ID: <htk7us0edah151g7romuivl6qr14pvlcvm@4ax.com>
Source record: 55132

Interesting script here... Nice info.. Thanks.

```
#!/bin/bash
#
# This script requires the iproute2 rpm package.
#
# We should add something in here to tell the remote tunnel what our
target is if our real internet IP
# is dyamic and changes. Otherwise the other end of the tunnel may
point to
# the wrong target IP address.
#
if [ "$1" = "" ]
then
echo Start Tunnel Usage: rc.tunnel remote_ip_address
interface_name remote_network_ip/netmask output_device
echo
echo The remote_network_ip/netmask can be used to specify multiple
network
echo routes by seperating them with the : character.
echo Example: 192.168.1.0/24:192.168.2.0/24
echo
echo Stop Tunnel Usage: rc.tunnel down interface_name
exit
fi

# Check to see if we are bringing the tunnel down
if [ "$1" = "down" ]
then
/sbin/ip link set $2 down
/sbin/ip tunnel del $2
exit
fi

#
# **Note: netmask 255.255.255.0 is denoted as "24" (24 bits)
#
# IP_GRE Tunnel setup
#
# Set the outbound interface here
# if this is a PPP connection specify the PPP interface that your
# connection is on. If this is a cablemodem connection specify the
# cablemodem network device. eth0 eth1 eth2 etc...
GRETARGET=$1
DEVOUT=$4
```

```
IP_REAL=`/sbin/ifconfig $DEVOUT | grep inet | awk '{print$2}' | awk
-F: '{print$2}'`
#
#
# Below is to lookup a hostname, BUT we can't
# do that right now because we have to figure out a way
# to see if its an IP address or a hostname. For now use remote IP
# GRETARGET=`nslookup $1 | grep Address | tail -1 | awk -F:
'{print$2}'`
#
echo Tunnel setup to $1 $3 $2 from $IP_REAL coming up
/sbin/ip tunnel add $2 mode gre remote $GRETARGET local $IP_REAL
/sbin/ip link set $2 up
/sbin/ip addr add $IP_REAL dev $2
for net in `echo $3 | sed 's/:/ /g'`
do
/sbin/ip route add $net dev $2
done
```

You wanna publish any more information on your site on how to get in?
::grin::

Nice pic's of london, BTW... The Westminster Abbey ones are especially interesting.

1225. Port to port communications using IR-9020

Newsgroup: rec.radio.cb
Date: 2000-10-10 00:00:00 UTC
From: "Dennis W. Ostrowski" <dwostrowski@lucent.com>
Message-ID: <39E3D354.D94634B6@lucent.com>
Source record: 55133

Bill,

I have not yet talked to the folks at iTouch because I wanted to read all of the published data I had for those products first.

It seems that the IR manager has a way to provide a direct connection from the control port to any other port (without needing an active internet connection) via a menu selected command, but I could not find any reference to any such menu or command in any of the literature for the IR 9020 element manager.

Now that I have done my research I am ready to converse with iTouch regarding this issue.

It is quite late (10PM) so I will contact them when I come in tomorrow morning.

Regards,

Dennis O.

Papa Smurf is a tour guide of sorts, he is in El Paso

He sells trips into Mexico from the border, he loads you up on the bus, and makes sure you get back on it later, after hours of booze and whores. He runs a nice little business picking up lonely truck driver at the El Paso truck stops and giving them a tour of Juarez, all the good parts of course.

Dennis,
Glad to see you around . . .
I have been gone since April . . .
nobody missed me . . .
It was my first break since the day we started the Newsgroup . . .
First break from computers as well as since 1982 when Jobbs gave birth
to my little
MonaLisa . . .

The transformers are need to clean out some of them there cabnet things
. . .LOL

Tired of all this Davie this and Davies that . . .
now everyone is using Davies parts . . .

Dennis, hince the time of "The Real Mcoy"
when the parts stop then everyone will doing there own thing . . .

You know those transformers, boards and last but not least cabs look
very, very familiar

It's been along run 1971' to 2001'

lot of good people . . .
lot of good sweeping RF . . .
lot of good builders . . .

It is more than just the so called home of the blues . . .

Take Care My Friend,
Brass

P.S. Forgot the original post

can't let the Sugar Hill Gang have all the fun . . .
they are getting all of you know who's transformers . . .

Brass

Im not sure about this thought beaker, I sell consumer electronics and have for nearly 10 years now. Any business license I have had or applied for doesn't restrict a product any more than a personal sale would. Currently we are expanding into cb radios and we have never had a license or permit which would govern what we actually sell as long as it falls into consumer electronics. Are you implying a separate "license" is needed to sell cb's?? Is there a fcc communication retail permit of some sort I am not aware of?

> read the fcc codes on cb , possession is not mentioned .

yes it is.... in case you can't read all of the rule below here is the
part that says something about possesion.

(c) The FCC will presume you have used a linear or other external RF
power amplifier if--
(1) It is in your possession or on your premises; and
(2) There is other evidence that you have operated your CB station

hmmmm.... need some help with that foot sticking out of your mouth?

Sec. 95.411 (CB Rule 11) May I use power amplifiers?

(a) You may not attach the following items (power amplifiers) to
your certificated CB transmitter in any way:
(1) External radio frequency (RF) power amplifiers (sometimes
called
linears or linear amplifiers); or
(2) Any other devices which, when used with a radio transmitter as
a
signal source, are capable of amplifying the signal.
(b) There are no exceptions to this rule and use of a power
amplifier voids your authority to operate the station.
(c) The FCC will presume you have used a linear or other external
RF
power amplifier if--
(1) It is in your possession or on your premises; and
(2) There is other evidence that you have operated your CB station
with more power than allowed by CB Rule 10, Sec. 95.410.
(d) Paragraph (c) of this section does not apply if you hold a
license in another radio service which allows you to operate an
external
RF power amplifier.

> equipment , but there is not a thing he can do till he catch's me
transmitting
> . (note: this would be a stupid thing to do , but i am making
apoint)

and your point is dead wrong. read the rules again or for the first
time because you obviously missed something. Here once again is the
rule you are missing and totally trashes your theory.

Sec. 95.411 (CB Rule 11) May I use power amplifiers?

(a) You may not attach the following items (power amplifiers) to
your certificated CB transmitter in any way:
(1) External radio frequency (RF) power amplifiers (sometimes
called
linears or linear amplifiers); or
(2) Any other devices which, when used with a radio transmitter as
a
signal source, are capable of amplifying the signal.
(b) There are no exceptions to this rule and use of a power
amplifier voids your authority to operate the station.
(c) The FCC will presume you have used a linear or other external
RF
power amplifier if--
(1) It is in your possession or on your premises; and
(2) There is other evidence that you have operated your CB station
with more power than allowed by CB Rule 10, Sec. 95.410.
(d) Paragraph (c) of this section does not apply if you hold a
license in another radio service which allows you to operate an
external
RF power amplifier.
---

basically the only thing that could save you is holding an amatuer
license, or something of that nature. But even then it would be pretty
damn hard to convince them that the big rack of amps in the back of
your truck hooked up to a cobra 29 is for something other than cb.

oh really, well in some ways i would have to say i am like old penny
pincher. he used to have 150 foot tower out by hobby airport. ran a
10,000 watt base station. got into all kinds of trouble for interfering
with airport communications. that is a bit too much. but i will give
him one thing. he was hard headed and nobody would stand in his way,
when he wanted something. now if you think the politics are bad now,
you should have seen them back in the late seventies and early eighties
when all those old farts where still alive and kicking. heck , amp, ha,
ha. boy you would have to crawl over broken glass to get one. the ones
in the know, kept it that way. oh a newbie, forget it, they would not
even talk to you unless they recognized your voice. and penny pincher
ran into this and more from the channel 1 crowd, but you know what.
they ran that bullshit game on him and he got tired of it and so he
started reading and studying and thinking about it and before you know
it, he was producing some damn nice tube amps. the last person i knew
who had one was old sparks in dayton, but he is probably dead by now. a
friend of mine over here by me had a 4 holer with 4-1000a s in it. not
bad for a guy who everyone told to take a big number and stand by. when

it was all said and done, he was the one telling them to shut up and don't you know they hated it. but they got beat by their own game and their own rules. but now, heck these kids get out here and buy this and buy that. i can remember a time when you would not even get your hands on a amp for years and years until one day somebody invites you over for a talk. then you had to be real nice and take whatever shit they dished out, then they would slowly walk you up the road, of course taking into consideration that you, under their rules mind you, would never achieve what you wanted , but you would achieve what they wanted. as long , of course, as they were still the big dogs. but things change and if you live on earth , you had better learn to change with them. and so i do . but i am like old penny pincher in one respect. i don't take no for an answer and when somebody throws up a road block in front of me, i just go around it. i know what i want and i am just damn hard headed enough to get it. so i shall get what i want. you know why? cause i can, no bout a doubt it. one of these days real soon, the revamped head sled will make its camio appearance on that wonderful channel 6 and my new handle will be george w. bush, rogo, and there will be no joy in mudville , 10-4, and while i am burying a 25000 watt slug in the corner, i want some of my homies to come out and play with curious, can you smmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmeeeeeeeeeeeeeeeeeeeelalalalalalalala lalalalalalalalalalalala.....what the headddddddddddddddddddddddddddddddddddddddddd.....is cooooooookin,...cd is out....

Why, from the infamous Hatfield and McCoy feud on the border of W.V. and Ky. A McCoy knocked up a Hatfied and she gave birth. When the child grew older, he got into a squabble with a cousin/wife/sister or whatever, and what happened was the kinfolk said, "y'all ain't a REAL McCoy...now git!"...now you know the TRUE story of the Appalachian feud.

I'm surprised that packet alone has held your interest in Hamming....
'Round here, packet's all but dead.... a little keyboard-to-keyboard stuff
at 1200 baud (very little 9600 baud) and that's about it. 15 years ago,
packet was cool stuff, but I haven't seen many newcomers to packet stick
around... they usually sell the TNC as soon as they find out how little
activity there is locally. Some of the VHF/UHF-to-HF links are neat to play
with, but in my experience it's actually QUICKER to make the same conatact
via CW.... 300 baud and packet delays make it a PAINFULLY slow way to
communicate.

Read the law! Mere "possession" of an amp is itself adequate
substantiation unless *you* can prove you never used it illegally.

We all know that FCC isn't likely to investigate TVI but if they do and
you have an amp you can say goodby to your whole station, from the power
lead to the tip of the antenna.

1274. Re: SS-4900b Mic Wiring.

Newsgroup: rec.radio.cb
Date: 2000-10-11 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <8s1sak$98h$1@slb7.atl.mindspring.net>
Source record: 55209

The mic uses a modified 7 pin shell with six pins active

Pin 1 - White - Audio Hot
Pin 2 - Black - Transmit common ? (Notes not clear on this)
Pin 3 - Red - Transmit hot (4.8v on RX)
Pin4 - Blue - TTL level voltage(4.8v) present on RX
Pin5 - Shield - Audio Ground
Pin6 - Green - 9.6v on RX and TX

Confirm these before wiring. I have a D104 on mine, and I am posting from notes I made prior to wiring it up.

I haven't checked the current requirements for Mic amps, but there may be a chance that pin6 could eliminate the battery in low current mic preamps.....

1275. Re: SS-4900b Mic Wiring.

Newsgroup: rec.radio.cb
Date: 2000-10-11 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <8s1thh$r1g$1@slb3.atl.mindspring.net>
Source record: 55210

One 2166 driving 2 1969s.

The George uses a PLL2002A, which is driven by a discrete CPU (Not a part of the PLL)
The SS4900B uses a LC72338, which is a single chip microcontroller which can operate up to 150 Mhz. It has 16K ROM program memory, 512 X 4 Bit RAM, Serial I/O and other features that are too complex for me to even describe

The George features CPU program options from the front panel. From what I have been able to determine, the 4900 is limited to the active features tied to button single-combinations used in conjunction with the power switch for "boot up" type configuration. These are combined with 4 options which can be jumpered on the main board and an additional set of 2 "either/or" headers that determine market defaults (AM, AM/FM, FM Only).

I am still working on getting a truth table for the internal options and which boot sequences enable them.

I have seen mine configured as:
straight 10m all-mode
export all-mode
export all-mode - low power
export AM/FM/USB
export AM/FM/LSB
export FM only
export AM/FM only
CB all-mode - low power 40 channel
CB AM only - low power - AM only

. I know there are more combinations I haven't found, and some of these I may not have documented properly.

The George was a good guess, as it's programmability features paralleled the preliminary info on the Superstar. The 4900 seems to be based on the Maycom BS-27 and BS-29 introduced 11/99. The PCB carries a Maycom LTD silk-screen, and shows revision 2/2000 on the main board and 5/2000 on the power supply, bit suggesting that they are still revising the design, or making custom configurations based on intended market.

I like my SS-4900b. The lack of documentation is a frustration. It has features I may never find how to unlock or access.
It will cover 12m, 11m, and 10m with additional band-edge coverage below 12m and above 10 m.

David

You miss my point, Bob. Sure, you can build stuff that performs half as
well as off-the-shelf gear for twice the cost, but there are too few
folks wanting to do that to keep FCC from reallocating our spectrum.

> I don't expect many hams will be able to custom build their own
> integrated circuits...(but) We can take advantage of the many
> cheaply available electronic components that are now even sold in Radio
> Shack, such as LEDs and opto-isolators.

Experiment with them to discover what? What kind of gear are you going
to build out of this stuff? A morse decoder that won't work because most
fists are too poor to copy? An archaic QRP rig? With all due respect for
TAPR, how are you going to advance the art by breadboarding somebody
else's design using Radio Shack components?

> If you have not been able to keep up with the solid-state age ....

I am a senior engineer in a Government lab evaluating off-the-shelf
(COTS) hardware for applicability to military needs because - guess what
- not even Uncle Sam can afford to custom design and build his own
hardware any more. It isn't cost-effective and the gear is outdated
before we can get it to the fleet.

>
I fear your statements re: the internet and population are true. In that
case, Amateur radio has no future and we may as well turn over 2-meters
to the CBrs
and the HF bands to businesses.

As far as hobby homebrewing providing qualified technical people, you must be joking. Tech's who breadboard other peoples' designs are a dime a dozen; or rather $10/hour. In 1950, industry was hungry for BSEE's to design new circuits but now only the best EEs - the top 1% perhaps - are designing circuits for chipmakers and the rest are overpaid techs using those chips like legos. Hell, most are coding software because there are more EEs than real EE jobs! Nothing you can build out of Radio Shack components is going to train anyone to join that 1%. Sorry ....

> Do you want Hams to only think like CBers? Or do you just expect CBers
> to think like non-technical Hams? At any rate you must start to think
> about what the difference is between CBers and Hams.

Hmmm.. we say "roger" and "OM" instead of "10-4" and "good buddy"? ;o) It may be a blow to your self esteem OM, but from my perspective there has been little difference since economics turned us into "appliance hams". Federal law makes CBrs buy COTS equipment; economics makes most hams do likewise. A tiny percent of CBrs violate FCC law to build their own gear; a tiny percent of hams violate economic common sense to do likewise. A few bad apples poison the CB barrel and judging by FCC enforcement logs a few hams do likewise. The major difference I see is that Amateurs properly report the bad apples and help the FCC catch them while CBrs do not, but that could be rectified.

> You can start by reading the Basis and Purpose of Ham Radio ...

" (b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which provide for advancing skills in both the communication and technical phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts."

Do you suggest that we are doing these things using Radio Shack components?

> Why do you think that Hams are the only group of operators who are
> permitted to build and service their own equipment?

For the same reason that my grandfather got to fly without taking an FAA exam: because it made sense back then. When the service was established, and radio was in its infancy, amateurs did indeed contribute a lot to the state of the art, both technically and operationally, and morse code was essential to operating proficiency. This is no longer true. Those who have contributed in the last decade or so may have been amateurs by coincidence but they didn't contribute *because* they were amateurs; they contributed because they had access to well funded labs. So, to address your question, the reason we still have the privileges they earned is that we have so strong a lobby that taking away those privileges has been politically unwise ... but that lobby is shrinking.

> Hams need MORE license classes and/or endorsements.

I have a better idea. Let's have just one class with one test: in one week, independently design a transceiver equal in size and performance to the latest COTS transceivers without duplicating any of their designs. That way there won't be so many people "cluttering up" the bands, right? Not even you or I ... :o(

> Does the name Pavlov ring a bell?

Indeed it does. Pavlov demo'd that one could cause a biological response by showing some abstract figure only, and the key is "only", just before the subject got to eat, et cetera. You may also know that porn is defined as that which arouses us sexually. It follows that censorship creates porn by turning otherwise common items into porn by denying us their common view and instead allowing us to see them only just before sex. How about them apples?

Hi I want to wire a microphone to my friends Cobra 148gtl and I need the pin-out schematic for the mic connector. Where can I find this info? He also has I think he said a Cobra 29? Are most of the Cobra radio's mic connectors wired the same? How about the basic cb radio's in general do they generally use the same mic connectors ie: 4 pin, 8 pin?? any help is appreciated.....Thanks,
Steve at: N6TT@jps.net

OK now that I'm clear you still think the TNT is not a narrow tuned amp... and yet you state that the trimmers and air coils are there for impedance matching reasons... doesn't make any sense. There are only two schemes used in impedance matching these types of amplifiers... wide band that uses transformers, and narrow band that uses trimmers and air coils. You know of another? You must... to make the statements you are.

My experience agrees with George's. I had an Avanti mounted on the
windshield
of my car. One night the whip blew off on the expressway. I didn't
notice. I continued
to operate until I arrived at my destination and noticed the whip was
gone. There
was no significant change in the operating parameters noticeable with or
without
the whip in place, IE I didn't notice any significant change in the
signal strength of
the repeater I was working, nor did the people with which I was in QSO
note any
significant change in my signal into the repeater. .....

Source record: 55229

Here's what Hollingsworth is REALLY concerned about!

SB QST @ ARL $ARLB039
ARLB039 ARRL seeks monitoring reports on 10 and 12 meters

ZCZC AG39
QST de W1AW
ARRL Bulletin 39 ARLB039
>From ARRL Headquarters
Newington CT September 29, 2000
To all radio amateurs

SB QST ARL ARLB039
ARLB039 ARRL seeks monitoring reports on 10 and 12 meters

In an effort to better document the extent of unlicensed operation on Amateur Radio frequencies, particularly 10 meters, the IARU Region 2 Monitoring System is surveying member societies about the extent of the problem. In order to provide statistical backing for its response, ARRL is soliciting reports from American hams to supplement its response to the survey.

ARRL Monitoring System Administrator Brennan Price, N4QX, is accepting reception reports from amateurs for a two-week period, from October 1 to October 14. Observations should include date and time in UTC, frequency, mode of the transmission, language, if known, and any notes which might assist in identifying the source. Observations should also be limited to amateur frequencies, focusing on 10 and 12 meters.

Price urges monitors to use caution before documenting a transmission as probably unlicensed. ''Most countries do not mandate a segregation of voice and digital modes, as the United States does,'' Price says. ''A phone transmission between 28.0 and 28.3 MHz is not necessarily illegal in the country where that transmission occurs, and if valid amateur call signs can be made out, the transmission should not be reported. However, lower sideband and AM transmissions between 28.0 and 28.1 MHz are usually unlicensed, and may be treated with suspicion.''

Reports should be e-mailed to Price at n4qx@arrl.org. All reports will be acknowledged, and respondents will receive a summary of the survey results via email.

I gave the power handling capabilities of the Wilson 1000 & 5000 per the Wilson web site. You are suggesting that Wilson inflated numbers. Could be, I dont have anything else to go on. I dont run that kind of power.

Regards, Nick

AGreed, as I said since I moved the lab upstairs I haven't had time to set it up, and at this point I doubt I'll even get to it. Not enough activity, and not enough interest on my part to do it. 9600bps used to be pretty fast, but not anymore. I've got the MFJ TNC and the G3RUH Modem, but it's pretty dusty. I think the last time I had it open was back in 1994, screws haven't come out of the case since.

I'm finding more and more of my old packet contacts on ICQ these days anyways.

> you are.

I was trying to show you that an amp can be wide band, (I did not say broad band), and still have trimmers and coils.

And an amp can also be narrow band even if it uses transformers; (if the builders decided to use capacitors to resonate the windings of those transformers to improve the performance and efficiency of the amp.).

I often SERIES resonate a transformer winding in an amp to limit it's bandwidth as a cure for a parasitic oscillation problem.

Bandwidth is a function of 'Q'.

A bandwidth of 500 KHZ might seem huge at 27MHZ but be quite modest at 2 GHZ.

What bandwidth would you consider to be narrow band?

500HZ, 1KHZ, 5KHZ, 10KHZ, 50KHZ, 100KHZ, 500KHZ, 1MHZ, 5MHZ, 10MHZ?

If I were tuning a CB receiver I would consider a 2.2KHZ IF bandwidth to be narrow band for AM, normal band for SSB, and broad band for CW.

My definition of a narrow band amp would be one that had to be tuned in the center of the band, and performance would significantly drop off as the band edges were approached. (EG= 27.000 to 27.400MHZ)

My definition of a wide band amp would be one that that had almost the same performance (+ or - 10%) from one band edge to another. (EG=26.500 to 28.000)

My definition of a broad band amp would be one that covered at least one octave up and one octave down from the center frequency with no serious degradation in performance. (EG=16.000 to 55.000MHZ)

Well, either way, that's a pretty old script. I did put copyright info in it, I put it in all my scripts. But I suppose you're going to try to take credit for it now. You can have it for all I care, all it does it set up an IP_GRE tunnel between 2 linux boxes. Any person with a bit of bash programming could write that in 10 minutes. In the most recent version I've changed the way that it's done and also added in some ip security on it as well. The new version is quite advanced. Dishes out routing information for other tunnel targets so that traffic goes directly from one to the other instead of distributing it through a central hub. The version that you "acquired" of the script doesn't even use the start and stop features, so you better put it in /etc/rc.d and call it from /etc/rc.d/rc.local

And uhh, not redhat box... U R wrong about that too. You have 2 more guesses.

Hope the script helps ya out! It's pretty obvious how to use it. And oh, you aren't going to get "In" with that script. Any idiot who knows a lick about linux will tell you that. If you want to make yourself look smart, do me and everyone else a favor here. Remember the golden rule.

Thanks for the compliment on my programming skills, I do appreciate it. But next time please be more direct with the delivery of the flowers. Your last bouquet that you delivered seems to be a bit wilted.

Looks like Karl is this weeks whipping boy. Last week it was Chuck and now
he's gone, wonder how long Karl will last?
These guys come in, flip off at the mouth, everyone learns to hate them real
fast and then poof they are gone.

1306. Re: I need help my pro 640e is broken

Newsgroup: rec.radio.cb
Date: 2000-10-11 00:00:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <39e4cae8.82272641@news.iserv.net>
Source record: 55241

Greetings!

As Scott has said before, the +8V voltage regulator could have gone
out...

Some things to help us out would be...

Do you get an RX [green light] when the radio is powered up?

Does the TX [red light] still work when you key up?

Check the PA/CB switch, these oftentimes get "stuck" between positions
and have to be used more often - using the switch gets some wiping
action going to help clear this up.

Check squelch control - if you get any noise from the speaker, it
should mute it when you operate the control. [It may be a failed
capacitor or the audio chip quit.]

Check the Ext speaker and PA speaker jacks - to see if dirt or water
caused the contacts to open up or corrode. [If the PA function will
work when you use a speaker - then the problem is related to something
in the RF section - and means that the 8 volt regulator is working and
the audio chip is fine.]

Yes, I have seen it before, happens quite often on PB-122 boards like
the PC-122 series too. Answering a few of the questions above helps us
narrow down the problem...

Hope this helps...

On Wed, 11 Oct 2000 00:26:16 GMT, while the modem was pondering it's

Source record: 55244

I am currently running 102" whip on my fulsize chevy truck. The antenna is well grounded and has a 1.1:1 vswr on my meter and only goes up to 1.3:1 on both ends of the range of my galaxy77. I was wondering if the antennas that I see on some of the keydown pages and on some of the "professional" cb setups are any better than my current 102 inch setup for a mobile setup of course.

Hi Folks,

Anyone got any circuit info on the above base radio.
Contains 2 boards, PTRF005DOX (PLL & VCO) and
PTBM085COX(everything else).
USB mode not working on TX or RX, and I want to undo some mods which
appear to be poorly done.

Many Thanks,

John

The 5000 has a larger conductor wire in the coil, and mini 8 (8x) coax instead
of Rg58.
The 5000 is good for about 600w continuous and 300 on the 1000 due to each of
their inferior handling capabilities of the coax.

I see what you're saying... maybe I should have said that the TNT is much narrower band than the typical transformer amp. The bandwith of the TNT is no more than about 4MHZ wide... whereas a transformer unit can have 25MHZ or more bandwidth. Soooooo.... comparatively speaking... the TNT is a narrow band amp! I consider an amp to be narrow band with a Q of >5. The TNT fits that description...

I hate to say it... but this is spam.
I don't mind seeing an occastional message saying that you have items for sale on a particular auction site... but posting every one of them daily basis might be a bit much.

1327. Want to Buy - CB That Scans

Newsgroup: rec.radio.cb
Date: 2000-10-11 00:00:00 UTC
From: twhite8611@aol.com
Message-ID: <20001011180309.17430.00001400@nso-cg.aol.com>
Source record: 55302

Can anyone recommend a radio that scans all 40 channels? I am looking for something that also has SSB, illuminated panels, built in SWR and NOAA.

I have an older Radio Shack radio that scans but I am looking for an upgrade for another vehicle.

Thanks

Tim

Source record: 55303

I decided to go ahead and get a Cobra 29 NWST. I am not interested in the export radios, having previously owned a DX55V. I just want a good receiver with decent selectivity and adjacent channel rejection.

You should have saved your money and got something else. I got one of the 29 NWWXST models and am very disappointed with the radio. You would have been better off with out the soundscrambler.

>you say you are allowed to own it .

Why were you busted?..... Site the reason. Did they determine that
you transmitted and the field strength was above what one would expect
with a 4 watts radio? Was the amp in line? All of this IS the "other
evidence" needed. If no "other evidence" was found did you not
dispute a confiscation without an explanation of what the "other
evidence" was?

>You site us a reference that proves what you say is true otherwise it is
>pure conjecture on your part. So who is actually joking here ..

No. Turning the table won't work here. Rules don't work that way.
There is no such thing as a rule that tells you what you can do. There
are only rules that tell you what you can't do. So it is up to YOU to
site the rule that says mere possession is illegal.

That depends. I the 'shoot out' antenna is an electrical 1/4 wave,
then, no, there's no diefference.

I am that peakaboo, where were you. Ask 55 if my truck talks. For what I get I get the job done. I had antenna problems but was not going to bring them up. I also blew in the final key with BB 1 second after I keyed the box. Why didn't you key hippie? Couldn't afford it. I'll cut your damn lips off you pull up next to my truck. You are obviously a big fan of Foxies, BB and the whole Florida thing. I built every goddamn thing in my truck from the alternators to the antennas. I bet when you key you are copying everything on the truck. You act like I was making fun of Foxie. Man get a grip. Let Foxie and BB speak for themselves. I get along fine with all the people at the breaks. The reason for that is I don't stick my nose where it don't belong, neither should you. Why didn't you act like this when you signed my guest book months ago? Not enough ground plane? You are assuming, you would know what to do with a real antenna problem. Leave people alone mudduck.

<kjv@adelphia.net>, using the forum rec.radio.cb did say:

:That machine isn't under my control. Sorry guys. Not me.

Like I said... You need to call your ISP and tell them to unfuck their
router. Their NAT is hosed. (It's prolly Cisco equipment, too. Go
figure)

Any guesses as to what I do for a living Karl? ::snicker::

On or about Wed, 11 Oct 2000 03:09:36 GMT, "Karl Vesterling"
<kjv@adelphia.net>, using the forum rec.radio.cb did say:

:Oh, now this is just precious... Man... What a low blow... And a
:threat... Man, which rock did I turn over.
:
:A wise man once told me that uneducated people who lose a debate will often
:resort to insults, threats and even perhaps violence in an attempt to prove
:themselves right.
:
Ya know, I would expect that out of you...

It wasn't a threat... It was an allusion to the fact that there's a
bunch of script kiddies out there who make it their job to cruise the
DNS's of these free IP/domain services, and taking down the boxes. I'm
not one of them. I outgrew that crap about 15 years ago.

So reach down between your legs, grab ahold of your sholders, and pull
your head out of your ass. I don't make threats. IF I was going to do
something, your little box wouldn't even be up right now. As I said, I
outgrew that crap...

Thank you for proving my point that mere possession is not illegal.
Perhaps you should take a reading comprehension coarse.
****
"Any electronic, electromagnetic, radio frequency, or similar device,
or component thereof, used, sent, carried, manufactured, assembled,
possessed,offered for sale, sold, or advertised with willful and
knowing intent to violate section 301 or 302a of this title, or rules
prescribed by the Commission under such sections, may be seized and
forfeited to the United States."
****
For individuals:

"Used"???? Wouldn't that be evidence of more that 4 watts of
expected field strength and possession?

"With willful and knowing intent"???? Wouldn't that be inline as per
the FCC rules specifically written for CBers.

How about a guy who possesses a RF amp who has never ever owned
or operated a CB and doesn't have any Amateur or Commercial license?
Is he illegal also? Will full and knowing intent has to consist of
something. Mere possession is NOT on of them.

No. Turning the table won't work here. Rules don't work that way.
There is no such thing as a rule that tells you what you can do.
There are only rules that tell you what you can't do. So it is up to
YOU to site the rule that says mere possession is illegal.

As far as I know, the only significant difference is that the 5000 will handle more power. Something on the order of 5k watts vs 3k watts for the 1000. I bought the 5000 because it was only about $10.00 more, so what the hell, maybe it will stand up better over the long haul. YMMV.

1359. Re: SS-4900b Mic Wiring.

Newsgroup: rec.radio.cb
Date: 2000-10-11 02:11:16 UTC
From: mobile51@aol.com
Message-ID: <20001010221116.26960.00002877@ng-cg1.aol.com>
Source record: 55262

Does anyone have the mic wiring diagram for this 6 pin radio?

Thank You!

Isn't the same as a President george. I've been told that these radios are the sme inside, even down to the three 1969 finals, 1 driving two.

Oh, now this is just precious... Man... What a low blow... And a
threat... Man, which rock did I turn over.

A wise man once told me that uneducated people who lose a debate will often
resort to insults, threats and even perhaps violence in an attempt to prove
themselves right.

The 122/244/640/840 chassis has problems with cold solder joints. It could be a bad 8 volt regulator. If you're in Baltimore, email me for a great tech. (No, I'm not the tech so I'm not tooting my own horn :)

My SGI has got it beat... Nice value of -20 and it cranks out about 1 unit every 3 hours. Running Irix, not Linux though. Linux seems to take up more CPU time and it doesn't have full support for the graphics engine (probably why) either. But it's kinda cute watching Gnome and KDE run on serious silicon.

So, uhhh, which company is going to buy SGI once it goes below $1.00/share?!??! Place your bets!

Oh joy... I can't hardly believe it's true... Let me call the psychic readers nutworks and see what they tell me to do!

(Anyone who believes this crap probably shops the home shopping network!)

(In deep sounding authoritive resounding voice!) -- Yes friends that's right, this piece of fine cubic zirconium is just 'precious', and we're letting it go for the 'amazing' price of $1,299.95! You can own this 'precious' high technological clear as diamond 'precious' stone for a mere $1,299.00 But don't delay, call now before the price goes any lower because these prices are falling like the rocks they are!

All depends on how they define 'precious' and 'amazing' price. Yes, it is 'precious', just look at how cute it is. And yes, it is AMAZING that they can get $1299 for something worth about $25.00 mostly contained in the 10K gold band it's fastened to. JUST LOOK AT THAT SHINE FOLKS! Several THOUSANDS of these rings have got to be worth THOUSANDS of dollars! I'm tellin' ya! You simply won't find a more AMAZING price on this fine piece of cubic zirconium!

Sad part is, people actually buy it. Same as the junk below. But so long as there are people not educated enough to see through the marketing, it will persist. The solution isn't making it illegal and therefore invest time and bother to stop the people doing it. The solution is to educate society to the point where each individual can think and reason for themselves. It's by far a more wise choice to invest in educating society than it is to to invest in having an uneducated society police themselves. In the latter case you eventually wind up with the blind policing the blind.

Now how can I put this? Oh yeah... 'Know what I'm sayin'?

1387. Re: 35 foot home made CB antenna?

Newsgroup: rec.radio.cb
Date: 2000-10-12 00:00:00 UTC
From: Karl Vesterling <kjv@adelphia.net>
Message-ID: <BUeF5.249$%J6.20945@news1.news.adelphia.net>
Source record: 55150

This is quite true. A while back I built a quad beam on 11M, and a quad beam on 70cm. Not only was the 70cm (440Mhz) beam more easily constructed, but it was also much more directional. (depending on how far the two elements were spaced apart.

Interesting thing about radio is the higher you go in frequency the more the radio waves behave like light. AND the less fussy the matching is on the antenna for the range covered. For instance my 70cm antenna covered 440 - 450Mhz with a 1.5:1 match being at about 445Mhz and 2:1 match on 450Mhz or 440Mhz. That's 10Mhz of bandwidth.

Now on the 11Meter beam. 26.985Mhz (been a while) - 27.405Mhz the match was about the same as the SWR results above, but the difference in bandwidth is significant.

There are also several types ways to match an antena. (SWR). The two most popular for homebrew are T match and gamma match. (Go to the library and study the ARRL handbook) For 11M, I'd suggest designing a yagi of some sort. Usually these have 4 ground plane elements, but you can add ad many as you like. For instance, with 4 ground planes at 90 degree angles to each other you'll wind up with a radiation pattern that resembles a 4 leaf clover. The optimum solution of course would be to have a 100% circular ground plane, but that isn't really an option because an 11M disk (or fraction thereof) would obviously have a lot of wind drag and suffer structurally under wind load. (there goes all your effort and time)

I've had quite good success with 1/4 wave Yagi's. All you need is an SO239 (Radio Shack), some hardware and a decent soldering iron/gun. They're cheap, they work, and you can't beat the price. Course they'll still call ya a mud duck.

But this is probably the cheapest experiment that you'll ever do. If you want to see how a ground plane effects the emitter just move the mag mount around on your vehicle and have a second station report your signal strength. After a few times of relocating the antenna you'll begin to realize that the more groundplane you have between you and the receiver the more signal strength you have in that direction.

By the way, when you do install your antenna, make sure that there is a solid connection to TRUE GROUND. 2 reasons. 1) Better radiation pattern. 2) Lightning needs a place to go if/when it hits.

One more thing. You'll need an SWR meter. Don't match antennae without it. (shouldn't have to tell you this, but I don't know how much you know) If you're serious about doing this, get a dual needle meter from MFJ. No need to calibrate. Key up and look at the intersection. Radio shack has some

cheap models out, but they're more of a pain than they're worth. HOWEVER, if memory serves me correctly I think they have a cheap SWR meter out that measures field strength. (Unless they've discontinued this fine piece of affordable equipment for another electronic whiz bang in the shell egg scrambler and omlette making remote control alarm clock toaster tv combo -- receiver not included) BTW: If you get the meter from Radio shack, you'll probably have to buy the needle separately! ;-)

> probably have to buy the needle separately! ;-)

1. Assume you meant to say 'ground plane' rather than Yagi. Dr. Yagi's parasitic-element beams have been a mainstay of radio since he invented them back about WW2.

2. Two percent bandwidth between 2:1 SWR points is pretty normal for efficient antennas. If it is much broader than this, it is a good idea to know why because the most likely reason is that some nearby object is being heated. Nothing is broader than a 50 ohm resistor.

3. You, of course, noted with your quad experiments that:
a: max field strength and min VSWR are at two close but different points.
b. max forward and max front-to-back are at two different reflector settings.

4. No antenna works really well without some major physical suffering by the installer.

Ain't antennas fun?

Never said you were Chuck. Guess you should learn how to read. But you are
the new Chuck for this week. Big mouth and universally hated. Since you
all ready stated my name twice in your message I will spell it real slow for
you B-A-R-R-Y. So I would only assume you are smoking crack or something.
I am sure Tom would not want some loud mouth advertising his shop. If your
his spoke person I feel sorry for the poor guy. Welcome to my killfile say
hi to Chuck for me.

Hello Radio enthusiasts

welcome to 9th Rheintal Electronica 2000
Date : Saturday: 4th, November 2000
What : Radio-, Electronics- and Computer-Fair
Where : D-76448 Durmersheim (Germany, Europe)
south of Karlsruhe
Autobahn A5 Frankfurt - Heidelberg - Basel,
Exit Karlsruhe Sued (Rheinhafen)

opening: 9.00 hr (a.m., CET)
closing: 17.00 hr (5.00 p.m., CET)

Where exactly: "Hardt-Halle" at 76448 Durmersheim

Parking: Free of charge Transfer from Parking-Lot
to the fairground

Directions:
Amateur-Radio : 145.500 MHz (call DF0RHT)
CB-Radio : 27.135 MHz (CB-Channel 15 FM, AM possible)

What to find: Amateur- and CB-Radio equipment, Transceivers, Antennas,
Computer, Periphererial, Software, Hardware, Components, Literature,
Additional Accessoires

Local Usergroups and Organisations for CB- and Amateur
Radio give Informations about Radio, Computer and applications.

Contributions, Discussions (in german language)
to the following topics (See below)

Information Program (in German Language)

9.00 Uhr German CB-Museum (800 radios in a coach, unique!)

9.30 Uhr Opening by the local major

10.00 Uhr Blitzschutz von Antennen
(ignition and antennas)
Helmut Heinz, DO5PZ/KC7TKQ

10.00 Uhr Virtueller Arbeitskreis fuer CB-Funk
(Virtual CB-Organisation for CB-Radio)
Alexander W. Eisele

11.00 Uhr GPS - Neue Moeglichkeiten fuer das Funkhobby
(New ideas for GPS and Radio)
Dr. Karl H. Ilg, DK2WV

11.00 Uhr Vergangenheit und Zukunft des CB-Funks
(History and future of CB-Radio)
Henning Gajek

12.00 Uhr Amateurfunk-Antennen
(Amateur-Radio Antennas)
Peter Rachow, DK7IH

12.00 Uhr Wie gestalte ich eine eigene Internet-Homepage?
(How to set up an Internet-Homepage)
Hans Juergen Schlager

13.00 Uhr Internet-Radio
(Broadcasting via Internet)
Alexander W. Eisele

13.00 Uhr DX-Peditionen (Diavortrag)
Franz Langner, DJ9ZB

14.00 Uhr Dreielement Yagi mit extended Erregerdipol
(Three-Element Yagi-Antennas)
Helmut Bensch, DL4KCJ

14.00 Uhr Das Handy - Kommunikation der Zukunft?
(Mobile Phone - communication for the future?)
Henning Gajek

16.00 Uhr Sagen Sie uns Ihre Meinung
(Final discussion)
Diskussionsrunde mit Verlosung

> and a whole other bunch of really cool technologies. My POINT that
> you MISSED is that CODE is OBSOLETE!

No it isn't! Morse is a great way to work weak DX, work speakers
of other languages etc. But I agree 100% that it doesn't mean we
should have to do it by hand in this day and age. If we ever lose
the new technology for some disastrous reason I'm sure we can learn the
code by hand again if we really need to, what with it being as simple
to learn as they say it is (hardly an achievement, huh?!).

CW is completely irrelevant to anyone wanting to use HF SSB, agreed.

As Dick says, rules are rules. Change 'em if you can, but if you're
that bothered you'll have to go with the flow. I personally don't
care enough. I can wait. I still like to whinge though, on behalf of
everyone else who thinks the same but can't be bothered to even
complain.

And hi Dick... saw your message on RF-man's guestbook - any comments
you made on Usenet are fair game to incorporate into a webpage
surely? Fair use.

You are taking what I said out of context. Mere possession is *not*
illegal. However, if the FCC has reason to believe that you may have
been transmitting illegally then possession without a license becomes
prima facae evidence that you have done so and the burden of proof is
upon you to prove that you did not, instead of vice versa.

Stopped down in Waycross Ga. this past Monday. Guy had a red GMC crew cab pickup, dual coil antenna on the cab with a tool box in the back. I kid you not, the whole freaking tool box was the amp. At least the whole top lid of the tool box was heatsink. I waited a half hour for him to come back to his truck hoping he would lift the lid and show me the insides but he never showed and I had to get on down the road. Anybody know anything about this rig. Gotta be one of a kind.

I'm wouldn't so sure, Bill. I myself have stated that possession itself
is *not* illegal *BUT* based in the following I'd say you'd be on thin
ice if enough neighbors whined about TVI to provide the "other evidence"
mentioned in c2 below. The root question is what constitutes "other
evidence".

Sec. 95.411
(c) The FCC will presume you have used a linear or other external RF
power amplifier if--
(1) It is in your possession or on your premises; and
(2) There is other evidence that you have operated your CB station
with more power than allowed by CB Rule 10, Sec. 95.410.
(d) Paragraph (c) of this section does not apply if you hold a
license in another radio service which allows you to operate an external
RF power amplifier.

Vhf antennas usually have a lot more bandwidth than thier HF counterparts
because the element thickness compared to wavelength is a lot greater at
VHF/UHF.

Imagine these nuts investigating a TVI complaint .....

A federal civil trial against Prince George's County police is underway in Landover.
Police are accused of wrongful arrests and civil rights violations from their botched investigation of the slaying of Corporal John Novabilski.

The Washington Post reports the lawsuit stems from one of the most embarrassing episodes in the department's history. Novabilski was shot eleven times with a high-powered weapon as he sat in a police cruiser at a Kentland liquor store. The killer took Novabilski's gun and ran.

Police investigators initially focused on Jeffrey Gilbert, one of the plaintiffs. Fourteen other men who were in the area the evening of Gilbert's arrest are also plaintiffs, including David Randall, who, minutes after Novabilski's murder, was taking a bath when a PG County officer burst in on him with gun drawn.

The plaintiffs were then handcuffed and forced to kneel on the sidewalk in front of the house where Gilbert was living. Gilbert himself was so badly beaten by several members of a SWAT team he could not be questioned by homicide detectives.

A little more than a week later, the man who actually killed Novabilski, Ralph McLean, ended a shootout with FBI agents and county police by killing himself. McLean was carrying Novabilski's gun when he died.

I didn't take it out of context. You yourself said that mere
possession is enough and that you would have to prove yourself
innocent. Those statements are wrong.

Yes, I stand corrected. You are correct. (Been about 7 years since this
experiment)

>
> 2. Two percent bandwidth between 2:1 SWR points is pretty normal for

2:1 is pretty normal and acceptable. When it approaches 3:1 that's when you
either got to match it physically, or with some sort of tuning box. It's
best to do the former than the latter. But usually when you get them tuned
properly you can get a 1.5:1. (At least I have) And with the 70cm nothing
was in close proximity. Now the 11M quad, well, it's pretty hard to get
that puppy away from anything. Must have weighed about 50lbs or so. Tough
to stick that on ordinary mast, so I only had it 10' off the ground from the
bottom horizontal element.

>
> 3. You, of course, noted with your quad experiments that:
> a: max field strength and min VSWR are at two close but different

a) This is correct. But for our friend just starting I assumed he'd be back
and ask more questions. Didn't want him trying for 3:1 or 4:1 for better
signal strength (and blowing the finals).

b) Tis true, space the elements differently, get different results!

> 4. No antenna works really well without some major physical suffering by
the

I didn't use the beam for that long. I made it for experimental purposes,
and it fell apart a few months later. It was fun while it lasted.

>
> Ain't antennas fun?
>

They're an art! I've been doing more Microwave lately, but all with commercial products like wireless networking products such as Wavelan (discontinued I think - replaced by some other PCMCIA abomination by the guys @ lucent.)

Hello to all;

I also have an AOR AR8000 handheld scanner for sale. No scratches on it. It looks like new. FULL coverage incl. cell. Scout mods done. $700.00 Canadian dollars.

Yves.

you have bought type accepted equipment if they were actually amatuer amplifiers ... an illegaly made amplifier does not have this type acceptance.

I believe i see the word possesion in this paragraph...and an amplifer that is not type accepted falls under this paragraph as well since it says "any electronic rf component" which i would say an amplifer fits that bill.

Sec. 510. Forfeiture of communications devices

(a) Violation with willful and knowing intent
Any electronic, electromagnetic, radio frequency, or similar device, or component thereof, used, sent, carried, manufactured, assembled, possessed, offered for sale, sold, or advertised with willful and knowing intent to violate section 301 or 302a of this title, or rules prescribed by the Commission under such sections, may be seized and forfeited to the United States.

if they are legal amps for ham use that is one thing but bootleg cb equipment is not, they are already illegaly manufactured and illegal to sell them and somehow you bought one... It is the same as if you buy stolen property and you say oh man how was i supposed to know it was stolen. But using your Logic what you are saying then is you could have a full warehouse of Cb amps and so long as you don't keyup with any of them or they don't catch you running any excess power they cannot touch them and you are not breaking any laws ...

Certainly in any professional sense. In the amateur service the rules will ultimately change to delete the code requirement. Personally, I think it is a myth that there is this herd of CBers et al chomping at the bit to have a real call sign and QSL bureaus just awaiting the demise of code tests. But as Yogi said, prediction is difficult especially about the future.

If one is heavily into DXing, however, CW is far from dead. One of the newsletters mentioned that the entire group of amateurs on East Timor are Morse-only ops including an American with the UN. So if you want East Timor, dig out the old keyer.

Beyond that, fun is the only justification.

Dick

Not that torqued up about it and fair usage it be. But it still carries a bit of sense of violation to see my name posted. A fair interpretation on the part of readers would be that it was intentional on my part. No Biggie.

In a theoretical sense, it might be reasonable to do Morse by compooter, etc. The varying character length among other things makes it less than an ideal way to communicate electronically. Unfortunately, the Golden Rule applies: The man with the Gold Rules. If I want to work East Timor, it will be on OOK CW. My opinion is irrelevant.

Wow, what a bargain. I bought an RG-99 for a little over $200.
I would be interested in knowing why anyone would spend that much
money on such an old radio. There are better radios for that much
and just a little more. Just because it's not made anymore doesn't
mean very much to me. Rare? They don't make the Chevy Vega anymore
either. Gimme a break...

I can run X. I threw a 'puter together to be a firewall for my cable modem. Built out of spare parts. I used an old P150 and 48MB of ram and a few gigs of space. Then I put RealServer on it. Then I put Apache on it. Should I post the IP's of the nitwits that attempt to FTP me?

I don't need a multiband HF rig to talk on CB. A simple TRC-451 (SSB) works for me.

Yeah, but Doc's is waaaaay faster... Who wants to wait 10 minutes for a screen to draw? Not me, that's why this one is based on a database engine instead of plain old files run by an ancient .cgi script. Tis true! And you can find links for several popular radios with just 3 clicks of a mouse. Service *>Click<* Manufacturer *>Click<* Model *>Click<*. All the info is right there in plain legible high contrast fast drawing instant gratification black and white. Usually with a picture of the radio model in question. Now, where do you get that ease of use?

I'll tell ya: http://kjv.homeip.net/~hr2510

That's where!

you sir are an ass Im a long ways from soc. sec..And I agree with the code requirement.Why?Because I like a challange,I like to work my brain.You are evidently one of what I like to call an (entitlement person) you think you are owed everything WRONG, WAKE UP .The reason we have kids killing kids ,high crime rates ,high welfare rates,ect is that no one wants to earn respect,possions,money because they are entitled!!!Morse is a tradition like the flag,turkey on Thanksgiving
in and apple pie.
but your right they will drop the morse requirement then you will complain about about the knowledge test .Just my opinion
KG4JNL (no code but working on it at 47 years of age) Steve

i dont have east timor but i have several friends in jakarta and one or two other islands. the one i hear and work the most often is Mr Heri 91-IR-101. he uses a 5 element yagi and about 500 watts so he always sounds good. indonesia is alive and well on 11 and easily worked here in the fall or spring.

I am quoting other sources. That particular one was interesting because of
the American involved. Given that the place just became a country again,
strange things can happen.

No doubt about it. When the F2 shines on the high end of HF it doesn't take a whole lot to work the world. Given that East Timor has been a country only a matter of months it should not be a surprise that you don't have it.

In the days of old, the amateur in a lot of countries was a pro in his off time. The classic one of these was Tom Christian, descendent of Fletcher, who could be any Pitcairn Island call he wanted. He was not only the only amateur on the island, he was radio period. When CW was in common Marine or other usages, it was not unusual to have them show up in the ham bands. To that extent, the image of the poor Hottentot working 3 watt CW while his wife cranked the surplus generator always was a bit of a crock.

With radio having become a plug-and-play caper, you are more likely to talk to the local political boss than anyone else.

READ ALL THE PARAGRAPHS VERY CAREFULLY AS IT STATES POSSESION IS CLEARLY ILLEGAL ::

==========
Sec. 301. License for radio communication or transmission of energy

It is the purpose of this chapter, among other things, to maintain the control of the United States over all the channels of radio transmission; and to provide for the use of such channels, but not the ownership thereof, by persons for limited periods of time, under licenses granted by Federal authority, and no such license shall be construed to create any right, beyond the terms, conditions, and periods of the license. No person shall use or operate any apparatus for the transmission of energy or communications or signals by radio (a) from one place in any State, Territory, or possession of the United States or in the District of Columbia to another place in the same State, Territory, possession, or District; or (b) from any State, Territory, or possession of the United States, or from the District of Columbia to any other State, Territory, or possession of the United States; or (c) from any place in any State, Territory, or possession of the United States, or in the District of Columbia, to any place in any foreign country or to any vessel; or (d) within any State when the effects of such use extend beyond the borders of said State, or when interference is caused by such use or operation with the transmission of such energy, communications, or signals from within said State to any place beyond its borders, or from any place beyond its borders to any place within said State, or with the transmission or reception of such energy, communications, or signals from and/or to places beyond the borders of said State; or (e) upon any vessel or aircraft of the United States (except as provided in section 303(t) of this title); or (f) upon any other mobile stations within the jurisdiction of the United States, except under and in accordance with this chapter and with a license in that behalf granted under the provisions of this chapter. Sec. 510. Forfeiture of communications devices

(a) Violation with willful and knowing intent
Any electronic, electromagnetic, radio frequency, or similar device, or component thereof, used, sent, carried, manufactured, assembled, possessed, offered for sale, sold, or advertised with willful and knowing intent to violate section 301 or 302a of this title, or rules prescribed by the Commission under such sections, may be seized and forfeited to the United States.

Sec. 302a. Devices which interfere with radio reception

(a) Regulations
The Commission may, consistent with the public interest, convenience, and necessity, make reasonable regulations (1) governing the interference

potential of devices which in their operation are capable of emitting radio frequency energy by radiation, conduction, or other means in sufficient degree to cause harmful interference to radio communications; and (2) establishing minimum performance standards for home electronic equipment and systems to reduce their susceptibility to interference from radio frequency energy. Such regulations shall be applicable to the manufacture, import, sale, offer for sale, or shipment of such devices and home electronic equipment and systems, and to the use of such devices.
(b) Restrictions
No person shall manufacture, import, sell, offer for sale, or ship devices or home electronic equipment and systems, or use devices, which fail to comply with regulations promulgated pursuant to this section.

1456. Astries digital power/swr meter

Newsgroup: rec.radio.cb
Date: 2000-10-12 00:52:10 UTC
From: Charles Kingsland <audiowizard@mediaone.net>
Message-ID: <_W7F5.1328$157.344476@typhoon.we.rr.com>
Source record: 55326

I recently purchased a aries digital power/swr meter. It works just great when using it on a cb however recently in a buddys rig I tried to hook it up inline after his boomer 600 and we get no reading, what gives?? The unit still works great on cb but not on the boomer 600 (yes, it is working) I havent had a chance to try any other amplifiers yet. The meter is supposed to be rated at 500w so I figured we could get a dead key rating with no problems.

Any ideas??

1457. Re: SS-4900b Mic Wiring.

Newsgroup: rec.radio.cb
Date: 2000-10-12 01:04:59 UTC
From: mobile51@aol.com

Source record: 55327

Thanks for the info and the correction. Thats quite a radio!
.....

One 2166 driving 2 1969s.

The George uses a PLL2002A, which is driven by a discrete CPU (Not a part of the PLL)
The SS4900B uses a LC72338, which is a single chip microcontroller which can operate up to 150 Mhz. It has 16K ROM program memory, 512 X 4 Bit RAM, Serial I/O and other features that are too complex for me to even describe

The George features CPU program options from the front panel. From what I have been able to determine, the 4900 is limited to the active features tied to button single-combinations used in conjunction with the power switch for "boot up" type configuration. These are combined with 4 options which can be jumpered on the main board and an additional set of 2 "either/or" headers that determine market defaults (AM, AM/FM, FM Only).

I am still working on getting a truth table for the internal options and which boot sequences enable them.

I have seen mine configured as:
straight 10m all-mode
export all-mode
export all-mode - low power
export AM/FM/USB
export AM/FM/LSB
export FM only
export AM/FM only
CB all-mode - low power 40 channel
CB AM only - low power - AM only

. I know there are more combinations I haven't found, and some of these I may not have documented properly.

The George was a good guess, as it's programmability features paralleled the preliminary info on the Superstar. The 4900 seems to be based on the Maycom BS-27 and BS-29 introduced 11/99. The PCB carries a Maycom LTD silk-screen, and shows revision 2/2000 on the main board and 5/2000 on the power supply, bit suggesting that they are still revising the design, or making custom configurations based on intended market.

I like my SS-4900b. The lack of documentation is a frustration. It has features I may never find how to unlock or access.
It will cover 12m, 11m, and 10m with additional band-edge coverage below 12m and above 10 m.

>>>>>READ ALL THE PARAGRAPHS VERY CAREFULLY AS IT STATES POSSESION IS CLEARLY ILLEGAL ::

==========
Sec. 301. License for radio communication or transmission of energy

It is the purpose of this chapter, among other things, to maintain the control of the United States over all the channels of radio transmission; and to provide for the use of such channels, but not the ownership thereof, by persons for limited periods of time, under licenses granted by Federal authority, and no such license shall be construed to create any right, beyond the terms, conditions, and periods of the license. No person shall use or operate any apparatus for the transmission of energy or communications or signals by radio (a) from one place in any State, Territory, or possession of the United States or in the District of Columbia to another place in the same State, Territory, possession, or District; or (b) from any State, Territory, or possession of the United States, or from the District of Columbia to any other State, Territory, or possession of the United States; or (c) from any place in any State, Territory, or possession of the United States, or in the District of Columbia, to any place in any foreign country or to any vessel; or (d) within any State when the effects of such use extend beyond the borders of said State, or when interference is caused by such use or operation with the transmission of such energy, communications, or signals from within said State to any place beyond its borders, or from any place beyond its borders to any place within said State, or with the transmission or reception of such energy, communications, or signals from and/or to places beyond the borders of said State; or (e) upon any vessel or aircraft of the United States (except as provided in section 303(t) of this title); or (f) upon any other mobile stations within the jurisdiction of the United States, except under and in accordance with this chapter and with a license in that behalf granted under the provisions of this chapter. Sec. 510. Forfeiture of communications devices

(a) Violation with willful and knowing intent
Any electronic, electromagnetic, radio frequency, or similar device, or component thereof, used, sent, carried, manufactured, assembled, possessed, offered for sale, sold, or advertised with willful and knowing intent to violate section 301 or 302a of this title, or rules prescribed by the Commission under such sections, may be seized and forfeited to the United States.

Sec. 302a. Devices which interfere with radio reception

(a) Regulations
The Commission may, consistent with the public interest, convenience, and necessity, make reasonable regulations (1) governing the interference

potential of devices which in their operation are capable of emitting radio frequency energy by radiation, conduction, or other means in sufficient degree to cause harmful interference to radio communications; and (2) establishing minimum performance standards for home electronic equipment and systems to reduce their susceptibility to interference from radio frequency energy. Such regulations shall be applicable to the manufacture, import, sale, offer for sale, or shipment of such devices and home electronic equipment and systems, and to the use of such devices.
(b) Restrictions
No person shall manufacture, import, sell, offer for sale, or ship devices or home electronic equipment and systems, or use devices, which fail to comply with regulations promulgated pursuant to this section.<<<<<

Simply put, it isn't my problem. I won't get paid to tell them that, and I won't get credit for it neither. Not worth my time. You tell em.

Besides, I wont be on their network much longer. I ordered DSL back in early September. Now it's up to NoNEx, errrr, Bell Scamlantic, errrrr Verizon to get out here and install it. As far as being Cisco, you're probably right. I'm partial to Foundry networks myself.

As far as a guess as to what you do... Nope... Not a clue. Tell me. ;-)

Nah! The person you were responding to is right. There is no need to be a "hacker" these days. There are plenty of canned routines that you can download and run - without understanding a thing about computers.

A lot of the viruses that are sent out these days are by kiddies making formula viruses using such packages. That is why, when the original virus they copied is blocked by virus checkers - all the variations disappear as well.

Old Biker <enfield@3n.net> wrote:
:>
:> Not !!! Interference, TVI does not substantiate excess power use.
:> The excess power use is the "other evidence" that the FCC needs in
:> conjunction with the possession of an amp to cook your goose.
:> Interference can be normal and not associated with excess power.

: Read the law! Mere "possession" of an amp is itself adequate
: substantiation unless *you* can prove you never used it illegally.

Wanna bet?

: We all know that FCC isn't likely to investigate TVI but if they do and
: you have an amp you can say goodby to your whole station, from the power
: lead to the tip of the antenna.

Take me for example. I used to have a ham license, but I let it expire,
when I got more interested in other hobbies.

I have 6 ham amplifiers capable of operating on 10 meters sitting on my
storage shelves in my radio room. Do you think the FCC, if they decided
to do an inspection of my station, would have grounds to confiscate the
amplifiers?

I can guarantee they don't. If they were to monitor my transmissions and
measure excess radiated power, then they "would" have grounds.

But they cannot confiscate them, simply because I do not have a license,
because I purchased those amplifiers legally - so own them legally. My
current lack of a license is immaterial.

I am not Chuck, nor am I Tom (as some people have suggested.) Look, it's really quite simple Barry, let's go over the details once again shall we?

I am: Karl J. Vesterling <- This is my name! (What's yours by the way?)
My name is not Chuck

You can tell by the difference, see how my name "Karl" starts with a K, and "Chuck" starts with a C? The first syllable sounds simlar but it is quite different, I assure you.

I am here to recommend that people get their work done by: Tom Bridge: (This is just for you Barry - Just so you remember! His site is http://kjv.homeip.net/~hr2510 and at the time of this writing there is over 180 radios from 7 different manufacturers accounting for over 210 different modifications on his site... And counting!!!)

Now Barry I understand you are a bit miffed at my glowing, sound and confident recommendation of Doc's abilities and superior craftsmanship. I assure you this recommendation doesn't come blindly or with any monetary compensation to myself or anyone else. It is my solid and concrete opinion that you cannot find a better tech for your radio. I wouldn't be out here tooting Doc's horn otherwise. This guy is simply the best tech you'll ever find. He's an urban legend in the Western New York area. AND his work is covered by warranty. Single click UPS tracking, all packages are insured, delivered in a prompt and professional manner.

And for recommending his servicess I get called a (how was that again, oh yeah...), " a whipping boy."

Now I don't enjoy being a whipped boy any more than you enjoy whipping boys, all I got to say is that if you cast a shadow of doubt upon the shadow of a mountain, it just means that the shadow you cast is darker. It doesn't mean that the mountain or it's shadow has changed any.

Oh good. Sideband perhaps we got off on the wrong foot here. I extend my apologies for you having to read through my glowing and sound recommendations for my long time friend who decided to venture forth onto the internet. I had obviously mistook you for a hoodlum and I fully recognize my error in doing so.

In fact you are correct. In the past I have been smurf attacked, port probed, etc infinitum. But in your previous posts regarding intrusion attacks you should have been a bit more clear as to your true intentions.

I extend my fullest apologies for any misinterpretations and responses by myself previously posted and should never have been so quick to judge your intentions. In retrospect, I certainly hope that you will forgive my previous error in conviction and convey your acceptance of my sincerest apologies.

(Did I mention Doc's site? -- Just kidding ;-)

Hello all,

I am going to be using my mobile for a base of a while, it is a Grant XL. I know I saw a post about this a lone time ago but I can't find it, I wanted to know if I can use a PC power supply to power my radio? Are there any dangers or shortfalls in doing this? If so is there anything I can do about them. The power supply I have is from a 486, it is a 200w ps. Using the +12V lead it lists a 1.3A min load current and a 8A max.

Thank you in advance for your help.

Maveric

Maveric,
If the power supply does provide between 1.5 and 8 amps, it
should work fine. Just be sure to use the 12v source, not the
5v one. Also, some computer power supplies are very noisy.

Yes they are. Contrary to what seems like everyone elses opinion, I've tested them. The big coil antennae (ones I've tested) beat the 102 hands down.

Maybe, or maybe he would rather direct his energies at RELEVANT
technologies, rather than wast a lot of time learning an outdated skill.

> WRONG, WAKE UP .The reason we have kids killing kids ,high crime rates ,high welfare
> rates,ect is that no one wants to earn respect,possions,money because they are
entitled!!!

There are many reasons why our morality is declining in this country.
Most of which has to do with the lack of personal responsibility. But it
also has little to do with CW.

> Morse is a tradition like the flag, turkey on Thanksgiving and apple pie.

It used to be a tradition to burn suspected witches at the stake. Your
assertion is that just because we did something one way years ago, we
should always do it? I guess we should also give up driving cars and go
back to horses and buggies.

> but your right they will drop the morse requirement then you will complain
> about about the knowledge test .Just my opinion

Yours is a common, if not misdirected, perception of those that would
rather see the code requirement eliminated. For whatever reason, you
cannot understand the difference between "no code" and "no testing".
Most people that favor the abolition of the code test, also favor
increasing the technical requirements to compensate for the lack of code
testing, or at the very least changing the test to reflect today's
technologies. I have not heard many people that want to see the ham
license become a giveaway. At that point it becomes worthless. What most
people want is to bring ham radio's testing requirements into the 21st
century. No one wants to eliminate the novelty of code, should you WISH
to use it. But to force everyone to learn it, considering that it is no
longer necessary to know it, is ridiculous.

Did you bother to read the CFR?

" (c) The FCC will presume you have used a linear or other external RF
power amplifier if--
(1) It is in your possession or on your premises; and
(2) There is other evidence that you have operated your CB station
with more power than allowed by CB Rule 10, Sec. 95.410."

"Other evidence" can be anything the FCC wants it to be, including TVI
reports because, like the IRS, FCC is judge and jury in these cases.

Bill Nelson <billn@spock.peak.org> correctly pointed out that

>If the fcc has evidence (power measurements) that you are using illegal
>power on some band, then it does not matter if you have a license or not.
>Possession of the amplifier is then assumed to mean that you used it for
>such illegal usage.

>The difference is that a Ham can legally have an amplifier hooked up in
>line with an Amateur rig, and it is not assumed that it is being used
>illegally - barring other evidence. An amplifier in line on a CB station

>is assumed to mean that it is being used.

Another difference comes in when the amp isn't connected at all. Actual measurement of illegal power on a band is itself convincing evidence but what if the "other evidence" is less conclusive, say a rash of TV and other interference complaints sufficient to provide probable cause but not to convict. In that case the mere presence of the amp would provide the needed evidence to convict unless the accused had a license.

"(d) Paragraph (c) of this section does not apply if you hold a license in another radio service which allows you to operate an external RF power amplifier."

That's what the law says. YMMV because it is enforced by human beings.

Yea..Morse is a tradition, one that needs done away with. You, sir, are not going to win any respect or credibility by coming here and calling someone an ass simply because you happen to disagree with one's opinion. You like a challenge and like to work your brain? Start with some spelling and grammatical lessons, and maybe a course in etiquette. As far as not wanting to earn something, let me clue you in on something that you are apparently blinded to due to your self-righteousness, many folks wouldn't get a hammie license if you GAVE them away free and the only requirement was an "X" on the dotted line. Chew on that for awhile.

The day before Thanksgiving this little boy heard his mom and dad fighting. The husband said to his wife, "You stupid bitch, you have floppy tits." She wasn't about to be outdone and said, "Well you have a crooked dick, you bastard." Well, the little boy heard every word they said. After they got done fighting, he went up to the mom and asked her what bitches and bastards were. She told him that they were people. Then he asked what crooked dicks and floppy tits were. She told him that they were coats and hats. The little boy accepted both answers and went on his way. The next day, they were getting ready for a huge feast with friends and family. The little boy went up stairs where his dad was shaving. The dad cut himself and said "Shit!" Well once again, the boy started asking questions and asked what 'shit' was. The father told him that it was "shaving cream". The boy accepted this answer and went downstairs were his mom was stuffing a turkey. When the mom cut herself with a knife, she said "Fuck!" The boy once again asked what 'fuck' was. She told him that it was "stuffing". About that time, the door bell rang. When the little boy went to answer the door, it was his grandparents. Upon opening the door, the little boy said: "Hi bitches and bastards. Let me take your crooked dicks and floppy tits for you. Dad's upstairs putting shit on his face and mom's in the kitchen fucking the turkey."

A young man goes into a drug store to buy condoms. The pharmacist says the condoms come in packs of 3, 9 or 12 and asks which the young man wants.

"Well," he said, "I've been seeing this girl for a while and she's really hot. I want the condoms because I think tonight's "the" night. We're having dinner with her parents, and then we're going out. And I've got a feeling
I'm gonna get lucky after that. Once she's had me, she'll want me all the time, so you'd better give me the 12 pack." The young man makes his purchase and leaves.

Later that evening, he sits down to dinner with his girlfriend and her parents. He asks if he might give the blessing, and they agree. He begins the prayer, but continues praying for several minutes. The girl leans over and says, "You never told me that you were such a religious person."

He leans over to her and says, "You never told me that your father is the pharmacist."

I agree with RollingRadios. My 55 (coil) is a much, much better mobile antenna on my full size pickup than my whip (mounted in the same locations). It consistently works skip better mobile or setting still. Setting dead still the whip does receive a bit better locally than the 55 (1/4 s unit on a large meter galaxy). The only time I use the whip anymore is when I am off roading.

My experiences - only worth what you paid.

RollingRadios wrote:

Howdy TW,

I won't get into the relevance of CW. I just wanted to say that I enjoy CW and enjoy working it. Whether it is abolished or not is immaterial to me. It will still, I imagine, be an option for those who want to use it--just like phone, RTTY, packet, etc.

Let me tell you a story about how I got interested in CW. When I first got my ticket, CW was a requirement for all licenses. So I studied it, passed my 5WPM, and settled down to work the VHF bands. I figured I'd never go any farther with it and quickly forgot about it. After a couple years, I decided that it would be nice to have the HF privileges, BUT there was that darned code thingy. I hung on the fence for awhile, and then thought, OH, well, (sigh), AWRIGHT! I'll do the code mess so I can get in some HF DX. I started studying, got on 10 meters, sent out a few CQ's. It was rough at first because I didn't even LIKE code. I don't know where it happened along the way, but the more I did CW, the more time I spent doing it, the more I couldn't wait to get home and on the air. And, the better I got at it. Before I knew it, I found myself able to copy QSOs without writing it down. THAT's when it became really fun. Suddenly this avowed code-hater was a full-fledged brass-pounder. It's hard to explain--this love of code. It's like learning a new language. The guy you are QSOing with may not speak a word of English, but you won't even know the difference. It's the ability to converse with somebody as if you were fluent in French or German, for example. It's the ability to hear CW and not have to "translate" it. It becomes fun after it's second nature, when you hear words instead of single letters. Often, one can tell what will be sent before it's sent!

Last nite, we had a QRMer up on 10 meters (I had been on another band) and a couple of the guys switched over to CW to QRM the QRMer. When I came back on freq., they were going at it. I heard the words "Yard Dog" in CW. This is a handle that some of the CB guys hung on a friend of mine that works on radios. He HATED that handle and NEVER, EVER used it on the CB, but these two like to aggravate him with it. So they were talking about him (nothing bad) on CW.

I wouldn't criticize anyone for hating Morse because I was once one of "them". I'm just saying that I went from hating it to loving it. For those who are willing to put forth the effort, it IS great fun. And, without putting anyone down for their preferences, there IS a sense of accomplishment when the mode is mastered. I ain't the greatest CW op--I miss words and characters at times, but the thing about that is that once you train yourself to keep going and not try to put down the missed words, the sentence will make sense anyway, and you can fill in the

"blanks" later. LOL! You'll find lots of "blanks" on my CW notepad, but I still can understand what was said.

It still is "to each, his own", and to those who don't like CW, it ain't no big deal. I mean, you like a Ford, I like a Chevy, for example. It don't mean a thing.

Best 73 to ya! (--... ...--)

Jerry

no there is no technical reason for it being loose... the hammer thing
i mentioned is a bit crude but it works... and a loose tip could
cause static in the reciever....

I have seen just under 1KW PEAK at 13.9VDC, but never more than that.

And that was right at the verge of destroying the B-E junctions of the 2879's.

Higher voltages are usually not used with a DX500 unless it is modified.

I fail to see what this comedic song from the early 80's has to do
with truckers. It's about a guy and his dog, which ran away.

Fire up napster and download "Truck Drivin Song"... funnier, and more
to the subject.

Just my two cents

Can you say "Rolling Thunder" ?

Not sure this is his rig. He is local to the area and is usually 30 over 9
with no fade 30 miles away while mobile...

I will ask him the next time he rolls through town.

You seem to mistake the fact that a cb amplifier is an illegal piece of electronic equipement, So if you owned some materials to make a explosive device and didnt blow anything up does it mean you can own them? Do they have to wait until you blow something up.. Plus it sounds as tho you are just reading the FCC page on CB rules and regulation they do not specify every law concerning amplifiers there nor do they spell them out. Ill ask you again Bill If you owned a warehouse full of cb amps and didnt transmit are you allowed to own them? Why are the amps confiscated when they bust you ? Are you allowed to own these non type accepted amplifiers ..If it is illegal to manufacture these amps why in Gods green
earth would it be legal to own one ...You need to check the United States Code? huh Tnom, Beaker, Bill please explain.. I am sorry I have gotten the "lowdown" from someone who is a little more knowledgeable about this area than any of you and that is the Federal Governement. I trust what they say since they are the ones who would be doing the prosecuting regarding this type of matter ... You can believe your own cb myths. Personally I am sure you wouldnt get bothered by the FCC unless you were bothering someone else so owning a amp is not likely to send you to the slammer or anything like that

1538. Re: Is Galaxy 99V any good? Esp. if peaked by ExpressElectronics?

Newsgroup: rec.radio.cb
Date: 2000-10-13 00:00:00 UTC
From: "Express Electronics Inc." <exports@exportradios.com>
Message-ID: <tqLF5.137$Zb7.58055@nnrp1.sbc.net>
Source record: 55440

The 99V does not perform well on SSB if you peak and clip it. It does, however, work very well when the radio is Turbo Tuned. We perform this modification and warranty it. Ask some of the guys here and see what they think about our Turbo Tuned Galaxy 99V.

Thanks,
David

It is only illegal if you use it on 11 meters. I have used mine on
10-17-40 meters
works GREAT!!!

Put it this way. Galaxy will not warranty a radio that has a super-talk.
I'm not sure if there is a mod that makes an amplifier sound worse, but I'm
sure there is one out there somewhere.

> more bandwidth. Soooooo.... comparatively speaking... the TNT is a narrow
> band amp!

The channel spacing on CB is 10 to 20KHZ.

The entire legal band is 440KHZ.

The 4MHZ amplifier bandwidth you just mentioned is 9 to 10 times the width of
the entire legal band, and 400 times the width of the actual channel spacing.

That does not sound very narrow band to me.

With that 4MHZ bandwidth there should be little or no degradation in signal
level or performance from one band edge to the other.

Based on the information you provided, I believe that amp. should be considered
a wideband amp. (as far as it's original design intent is concerned).

> I consider an amp to be narrow band with a Q of >5. The TNT fits
> that description...

To have a Q of 5 with a 50 OHM load impedance, the output capacitor would have
to have an impedance of 50/5 = 10 ohms, or less!

That means the output cap to ground in that 'L' network would have to be 600
PFD. OR LARGER!

The output caps I see are typically less than 100 PFD..

Or a 200 to 300 PFD. trimmer cap which ends up being set to somewhere around
100 PFD..

The reactance of that cap would be around 59 ohms at 27MHZ.

50 ohms / 59 ohms = .8475

That would be a 'Q' of LESS than 1.

A 'Q' of .8475 is NOT > (greater than) a 'Q' of 5.

That equates to a very large bandwidth.

And fails the test given in your description above, specifying a minimum 'Q'
of 5 for a narrow band amp.

> watts). i may want one myself. ciao

I would lower the dead key to 200 watts or so.

The DX500 can reliably peak at 600 to 850 watts, and I have seen them peak as
high as 990W at 13.9VDC under perfect conditions.

Toll Free!

Show this guy your great big Johnson!

E.F.Johnson Co. made some absolutely great tube radios.

Some of the Amateur transmitters they made ended up being used on the CB band, and some of them were very large!

Johnson should have stuck with tube radios, because when they switched to solid state, they failed miserably, and now the company is no longer making CB radios.

But when you occasionally hear someone on the band that sounds 'thunderous' like the voice of GOD, and easily walks over everything else out there at the time, it's probably some lucky CB'r talking on his 'Great Big Johnson'!

I believe Toll Free has some pictures of some that he can provide hypertext links to if he happens to read this.

This is true of most radios. A 148/Grant sounds like sh!t on sideband
if clipped and they also splatter big time on AM that way.

Maveric,
All I can say is that if it's as noisy as one that I had
at one time, take it apart, throw the parts away so no one else
could possibly put it back together!!
There are ways of quieting a noisy power supply. Depending
on what the PS cost, it may or may not be worth the trouble.
Wait till you se for sure...

1558. PSK31 for DX

Newsgroup: rec.radio.cb
Date: 2000-10-13 00:00:00 UTC
From: Tom Jones <interko@centrumNOSPAM.cz>
Message-ID: <8s78s5$14s$1@crax.cesnet.cz>
Source record: 55510

Hi,
where to find a PSK31 or other digital modes (RTTY,Hell,MT63..) traffic on
CB bands for DXing?
Nothing heard and nothing found on www, except AX.25 Packet.
Thank you.
Tom

TVI can be, but is not in itself evidence of excess power. As I have
said before mere possession is not illegal.

Chris your watt meter must be lying.
Not to be rude, but that amp is not doing that kind of RMS wattage. The peak wattage is believeable, but not the RMS wattage.

If this modification is done correct it will not change the "sound" of the radio. It will allow the forward swing to stay up there no matter where the deadkey is set. As long as he does not turn the deadkey down too low his radio will sound fine, look fine on the scope etc. etc.

The way I would go about filtering a power-supply of that nature is to add a electroltic capacitor of 33v 2200 microferrits to the voltage regulator before it goes into the amplifing transistors. I would also add an electroltic capacitor at the final output of the power-supply .

Your supposed to use a 1N4148 not a 1N4145. You WILL be able to find the 1N4148 if for some chance you can't a 1N914 will work just as well.

I custom build each power supply to handle rough treatment and
daily
abuse especially for the guy who like to have a heavy 8 pill maul
box
out of the car in the house.These power supplies supply up to 150
amps
contnuous duty and throws out 18 volts.I build and ship $450.00
total
check around with other people and tell them beat that price and
if you
do i will build for $375.00.These will work great with your
Davemade 2x8
with a good cobra 2000 you would be smoking!

> want to experiment with the amp!

Regardless of the intended use part 47, section 2.815 of the FCC regulations make this amp illegal to *offer* for sale in the US. See the following, or go look it up on the FCC page:

[CITE: 47CFR2.815]

Sec. 2.815 External radio frequency power amplifiers.

(a) As used in this part, an external radio frequency power amplifier is any device which, (1) when used in conjunction with a radio transmitter as a signal source is capable of amplification of that signal, and (2) is not an integral part of a radio transmitter as manufactured.
(b) After April 27, 1978, no person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency power amplifier or amplifier kit capable of operation on any frequency or frequencies between 24 and 35 MHz.

Note: For purposes of this part, the amplifier will be deemed incapable of operation between 24 and 35 MHz if: (1) The amplifier has no more than 6 decibels of gain between 24 and 26 MHz and between 28 and 35 MHz. (This gain is determined by the ratio of the input RF driving signal (mean power measurement) to the mean RF output power of the amplifier.); and (2) The amplifier exhibits no amplification (0

decibels of gain) between 26 and 28 MHz.

Keep the illegal stuff out of rec.radio.swap.

- Bob

Old Biker <enfield@3n.net> wrote:
:>
:> You have to be joking. Mere possession has never been illegal
:> Site the reference that allows mere possession to be enough to
:> substantiate illegality.

: You are taking what I said out of context. Mere possession is *not*
: illegal. However, if the FCC has reason to believe that you may have
: been transmitting illegally then possession without a license becomes
: prima facae evidence that you have done so and the burden of proof is
: upon you to prove that you did not, instead of vice versa.

If the fcc has evidence (power measurements) that you are using illegal
power on some band, then it does not matter if you have a license or not.
Possession of the amplifier is then assumed to mean that you used it for
such illegal usage.

The difference is that a Ham can legally have an amplifier hooked up in
line with an Amateur rig, and it is not assumed that it is being used
illegally - barring other evidence. An amplifier in line on a CB station
is assumed to mean that it is being used.

Source record: 55451

Where are you measuring the swr? Between the amp and antenna or between the radio and amp? If the meter is on the output of the amp, don't forget to recalibrate the forward adjustment when you turn on the amp. Swr doesn't change with output. IF your amp is generating a ton of harmonic energy it could kick make the meter go nutty and a low pass filter would help. If the swr is being measured between the radio and amp, learn to live with a higher swr feeding the input to the amp. If it's really out of control get a small match box for it or have it modded for adjustable input tuning. Maybe even try your luck with different coax lengths between the radio and amp. You can get a lowpass filter from any ham retailer.

>Nice radio , but $750.00 !! WOW , thats ebay for ya .
>

Ive always been a "Tube Head" when it comes to "Vintage CB" but $750.00 for a Browning,.....I dont think so. Ive had the Browning Mark 2, 3, 4, and 4A, (The Mark 4 being my favorite of the Brownings) but, to be quite honest, they really DONT stack up too well compared to a Tram D201/D201A series radios, I can tell this fellow whos selling the Browning, that the D201 and D201A's I have are leaps and bounds better all around performers than ANY of the Browning Eagles ive had, and ALL the radios I had, (including my current Trams) were virtually "like New" radios. I wish him luck selling it, I know folks on e-bay pay quite a bit for some of this old era tube sets. "Just My Opinion" of course.
Frank in Connecticut.

1603. MURS... VHF 2w CB

Newsgroup: rec.radio.cb
Date: 2000-10-14 00:00:00 UTC
From: Cap'n Crunch <kcfamily@tir.com>
Message-ID: <3f_F5.35702$XV.2183059@nntp3.onemain.com>
Source record: 55457

I remember seeing questions asked about a set of VHF CB freqs....

* FCC set to authorize MURS: With no fanfare, the FCC is set to authorize a new Citizens Band Radio Service to be called the Multi-Use Radio Service, or MURS. The service, which came about as part of the biennial review of Part 90 of the FCC's rules, will deploy five former Private Land Mobile Radio Service VHF "color dot" channels for voice, data and imaging transmissions. The channels, 151.82, 151.88, 151.94, 154.57 and 154.60--will be authorized for up to 2 W on an unlicensed basis under Part 95 of the FCC's rules. The establishment of MURS was buried within a huge Report and Order and Further Notice of Proposed Rule Making released this summer as WT Docket 98-182 and PR Docket 92-235. The FCC said it will "revisit" the issue of allocating additional MURS channels "at a later date should additional support develop." The effective date to deploy MURS is pending completion of the FCC proceeding

I understand that it's just your Opinion, But you have to respect that If someone really wants something then it's there Opinion on what it's worth to them and I will go a little pass that, 2 years ago when I paid for that very radio...People said I was nuts,But it's as simple as the good things in life just become worth more money (like good stocks)

Heres one more...that Allot of people had more problems with Tram D201's and D201a's breaking down on them .

but without any questions...Browning & Tram were the best on the market and still are!

1617. This is going to start an argument!!!!

Newsgroup: rec.radio.cb
Date: 2000-10-14 00:00:00 UTC
From: "Express Electronics Inc." <exports@exportradios.com>
Message-ID: <jh1G5.67$ef2.32858@nnrp1.sbc.net>
Source record: 55471

OK, I know this is going to start an argument, but I just can't help it. I have responded to about 100 emails in the last week that comment on having a clipped part in their radio. My question is this. Why the heck do some of you guys clip parts? It makes absolutely no sense to me. None whatsoever!! By clipping parts, you will only add harmonics which cause distortion. That is basically like saying if you remove your fuel filter on your truck, you will get an extra couple of MPG. This entire concept is ridiculous. Check out this link on why clipping parts will ruin a radio.

http://www.exportradios.com/techcenter/techpage1.htm

I had a guy call me on Tuesday of last week. He stated that he had bought a Super Star 4900b base from me. He said that it was not making his modulation meter on his DOSY slap the other side of the meter. He ask me where the modulation transistor was on the board. I told him that this would void his warranty and that it would only make him sound distorted. He didn't care. I then told him that I really did not recommend him doing this because the radio uses an SMD board and it would only end up causing him problems. Anyways, he got mad and hung up. Yesterday, this same guy calls me on the phone. Below is the phone conversation:

EEI: Express Electronics. Can I help you??

Customer: Yes, do you sell parts for Super Star radios?

EEI: Which Super Star are you referring to?

Customer: The 4900b base station.

EEI: What part are you looking for? (I was thinking he meant a knob, or switch, or microphone, etc....)

Customer: I am looking for a transistor.

EEI: You are looking for what?

Customer: A transistor.

EEI: You do realize that this is an SMD board right?

Customer: Yes. I'm just not sure what the part number is. The transistor just doesn't say.

EEI: I'm sorry sir. We do not carry that part.

Customer: Well, could you send me a schematic? Or can you tell me where I can find this part.

EEI: Sir, you may want to try to call Mouser or RF Parts. I know they won't know what you are talking about, though.

Customer: Well, the radio sounds distorted and is not swinging as far on my DOSY.

EEI: Sir, I told you that this was not recommended. I'm really not sure what to tell you. We would fix it for you, but you opened the case and you also removed parts which I told you would void the warranty.

Customer: Well, I guess I spent $400 for nothing.

EEI: Sir, I explained to you that this would void your warranty the other day. I also told you that you could send me the radio back if the radio was not working properly and I would repair it for you for free.

Customer: Well, ok. I guess I'll just have to see if I can find this part somewhere else.

I'll let you decide what you think about this situation. By clipping parts, he ruined his radio and may not be able to fix it. Just think how many Cobras, Unidens, Galaxy's, Connex's, Ranger's, etc.... have this same problem.

> radio will sound fine, look fine on the scope etc. etc

I don't know Peakaboo. I have never seen this mod work correctly. Besides, we have a very good working arrangement with Galaxy Radios USA. This is the one mod they absolutely dispise. I have seen this mod completely screw up a radio. I like our Turbo Tune because #1 Galaxy approves it #2 It looks great on an o'scope and a meter #3 It will allow the radio to have great forward modulation at a high or low deadkey #4 It gives the radio a perfectly round wave form at any power setting.

Can you say this about any mod kit on the market????

What people seem to look over is this. If your radio has a pointed, flat, or distorted waveform, it may sound alright at 25 watts RMS. But try adding a 500 watt RMS amplifier to this radio. You have just multiplied the distortion and over modulation to where other radios will hear it at a much higher level. If you do not believe me, try going to channel 6, 11,15, or 26. See if you can count more than 3 guys that radios sound crystal clear!!

although its a steep price it is one of the best ones left around. no question
about that. its good looking.

> check you ham laws and by laws all day. this is cb, the land of the
lawless
> buddy.

My post was to a ham operator that does have to abide by the ham laws
and bylaws... not to somebody who was insinuating that he/she was going
to use it on the 11 meter band.

you dont like it go away cuz where here to stay. right or wrong
its the
> way it is and alwasy has been.

Well, you couldn't be more wrong. It isn't the way it "always has been",
and the fear that existed in the 70's of prosecution by the FCC is on
the rebound due to vigalant efforts of one certain special agent
appointed by the five-member FCC board by the name of Hollinsworth...

Ask the fellow named George Flatton, I believe his name was, that
resides in Florida that figured "he could do whatever the hell he
wanted"... he's facing jail time and a larger fine than you'd be able to
pay in your lifetime, i'm sure.

If the new resolution passes, and i'm sure it will, where the FCC will
empower state and local authorities to enforce the laws the FCC has
regarding 11 meter CB activity, you better hope your neighbors don't
find out and begin calling the police everytime your CB amplifier messes
up thier television or comes across their phone... SURE, in the past the
"cops couldn't do anything about it", but NOW, guess what... .

No, of course not... But the law says you cannot answer it.

The 150 mile rule is
> rubbish.

I'd be funny to be in court when you appear in front of a court
magistrate to answer to why you violated FCC rules and regulations; go
ahead and tell the judge "that rule is rubbish!"

> it is only illegal if you use it on 11 meters.

That is incorrect. Read part 97 of the FCC code of regulations.

> These amplifiers are LEGAL for Industrial, Scientific, Medical, Export
> or
> Licensed Amateur Radio Operators use only.

Read part 97. That amplifier is NOT "type accepted". There is no other use for this amplifier than to amplify RF signals put into them; you could posses one for scientific, medical or industrial use as long as you never turned it on and amplified a signal through it. I guess it would make one pretty paperweight.

> It is a violation of FCC regulations to operate these amplifiers on
> the Citizens Band in the United States.

Yep. And on the amatuer bands too.

>
> so whats all the fuss! who's to say what the person buying it,is going
> to use it for.RIGHT!!!!

Messing around with them in any sort of way is enough to draw attention and put your license in jeoprady. Are you sure you want to do that?

>
> It is up to the person buying the amp to decide how they use it.
> Hey there could be a bunch of MAD SCIENTIST EXPERIMENTING out there
who
> want to
> experiment with the amp!
>

Yep, this is true. Possible experiements that are legal for this amplifier are as follows;

(1) Dropping it to test gravity
(2) Emersion in water to observe displacement
(3) Door stop potential
(4) Judging visual simularity to shoe boxes

A grain of sarcasm is, of course, within.
